The Clinton Record
Clinton's State-by-State Economic Progress

Clinton's Vision and Accomplishments - Newer Information

Economic Leadership and a Stronger Economy

Under President Clinton's leadership, almost 6 million new jobs were created in the first two years of his Administration -- an average of 250,000 new jobs every month.

In 1994, the economy had the lowest combination of unemployment and inflation in 25 years.

As part of the 1993 Economic Plan, President Clinton cut taxes on 15 million low-income families and made tax cuts available to 90 percent of small businesses, while raising taxes on just 1.2 percent of the wealthiest taxpayers.

President Clinton signed into law the largest deficit reduction plan in history, resulting in over $600 billion in deficit reduction. The deficit is going down for 3 years in a row for the first time since Harry Truman was president.

Fighting Crime and Restoring Our Communities
The President signed into law the Brady Bill, which imposes a five-day waiting period on handgun purchases so that background checks can be done to help keep handguns away from criminals.

The President's Crime Bill will put 100,000 new police officers on the street. More than 1,200 communities have already received grants to hire 27,000 additional officers.

The Crime Bill also punishes criminals by expanding the number of offenses eligible for the death penalty and implementing the "three-strikes-and-you're-out" provision.

And, the Bill banned the manufacture of 19 specific types of deadly assault weapons, while simultaneously protecting hunters' rights by exempting over 650 hunting rifles.

Strengthening Our Families: Security and Opportunity
President Clinton signed the Family and Medical Leave Act. The law, which covers over 42 million Americans, offers workers up to 12 weeks of unpaid, job-guaranteed leave for child birth, adoption, or personal or family illness.

President Clinton expanded the Earned Income Tax Credit to cut the taxes of 15 million working families with incomes of $27,000 or less.

President Clinton granted waivers to 25 states -- half the nation -- providing for comprehensive welfare reform demonstrations.

President Clinton ordered the U.S. Justice Department to conduct the first-ever crackdown on deadbeat parents who refuse to accept financial responsibility for their own children.

Signed an Executive Order cracking down on federal employees who owe child support.

Cutting Bureaucracy
President Clinton has already cut the federal bureaucracy by more than 100,000 positions. Under the recommendations of the National Performance Review, the federal bureaucracy will be reduced by 272,000 -- its lowest level since the Kennedy Administration.

And, he reduced the White House staff by 25 percent.

Making Education A Priority
Under the President's Direct Student Loan program, students can borrow money directly from the government at a lower interest rate and with many flexible repayment options, including the option to repay with a percentage of their after-graduation salary. Taxpayers will save at least $4.3 billion over five years.

In 1994, over 20,000 AmeriCorps members tutored students, immunized children, reclaimed urban parks, and patrolled neighborhoods. In return, they earned $4,725 per year of service towards college tuition or job training.

President Clinton signed into law Goals 2000, a national standard of excellence for our public schools. Already, 41 states and territories have received federal grants to raise academic standards and improve schools.

President Clinton's Safe and Drug Free Schools and Community Act and the Safe Schools Act provide funding to schools to fight violence and drug abuse. Schools can use up to 25 percent of their funds to purchase metal detectors, develop safe zones, and hire school security personnel.

The President's School-to-Work program provides venture capital to spark a nationwide system for moving America's young people from high school to a job with a future. In 1994, all states received planning funds for their school-to-work program.

Charter School legislation signed by President Clinton encourages states and localities to set up public school choice.

Expanding Markets for American Products
The Clinton Administration forged a bipartisan coalition to pass NAFTA, after concluding tough negotiations on side agreements covering

workers' rights, the environment, and import surges. Exports to Mexico rose 23 percent in the first 11 months of 1994.

President Clinton led the fight to pass GATT, which lowers tariffs worldwide by $744 billion over ten years -- the largest international tax cut in history. GATT cuts tariffs on manufactured goods by more than one-third overall and eliminates tariffs in major markets in a number of sectors in which the U.S. is particularly competitive.

Protecting Our Environment
Under President Clinton, the EPA launched its "Common Sense Initiative" to make health protection cheaper and smarter by focusing on results rather than one-size-fits-all regulations.

The President's Northwest Forest Plan is putting communities in the Northwest back to work, while conserving ancient forests.

After decades of conflict, the Clinton Administration negotiated a consensus plan to protect California's most valuable natural resource -- its water. The San Francisco and Delta estuary supplies dr inking water to two-thirds of the state's people, provides irrigation for 45 percent of the nation's fruits and vegetables, and sustains 300 aquatic species.

Promoting Security and Freedom Abroad
President Clinton hosted the signing of the Israeli-Palestinian Declaration of Principles in September, 1993, and the signing of the Israeli-Jordan Washington Principles in July, 1994 -- historic agreements between the leaders of Israel and her Arab neighbors to settle differences by peaceful means.

To enhance European security and stability, the Clinton Administration proposed the Partnership for Peace program, offering former Soviet republics and Central/East European states closer ties with NATO. Already, 22 nations have signed on, since NATO's adoption of the program in January, 1994.

As of May, 1994, nuclear missiles in Russia and the United States are no longer targeted against any country. And, as a result of other Clinton Administration efforts, the Ukraine is ahead of schedule in reaching the goal of transferring 1,500 nuclear warheads to Russia for dismantlement.

President Clinton peacefully restored democracy to Haiti, curbing the violence that threatened tens of thousands of Haitians, securing our borders, and upholding our commitments and the commitments made to us in the process.

CREATING ECONOMIC OPPORTUNITY AND SECURITY FOR ALL AMERICANS
Signed the Economic Package, August 10, 1993.
The economy created 7.7 million new jobs in the first 34 months of this Administration.
Passed the largest deficit-cutting plan in history -- saving more than

$1 trillion over seven years.
On track for three consecutive years of deficit reduction -- for the first time since Harry Truman.
Cut federal spending by $255 billion over 5 years.
Made new tax cuts available to over 90% of small businesses.
Unemployment has fallen from 7% when President Clinton took office to its current rate of 5.6%
Lowest combined rate of unemployment and inflation since 1968.
1994 real GDP growth was the highest in a decade.
Proposed a plan to balance the budget while protecting critical investments in education.

PROMOTING A FUTURE OF OPPORTUNITY
Increased Head Start funding by almost $760 million.
Passed the Student Loan Reform Act, August 10, 1993.
Implemented the National Service Act, September 21, 1993.
Signed the Goals 2000: Educate America Act, March 31, 1994.
Enacted the School-to-Work Opportunities Act on May 4, 1994.
Signed the Elementary and Secondary Education Act Reauthorization

MAKING COMMUNITIES AND SCHOOLS SAFE FOR OUR FAMILIES
Passed the toughest most comprehensive Crime Bill ever, September 13, 1994
Signed the Brady Bill, November 30, 1993.
Enacted the Assault Weapons Ban as part of the Crime Bill.
Put 100,000 new police on the street -- nearly 31,000 more officers have been funded.
Signed the Violence Against Women Act as part of the Crime Bill.
Signed the Safe and Drug-Free Schools Act, October 20, 1994.
Issued Presidential Directive enforcing a "Zero Tolerance" gun policy in schools, October 22, 1994
Submitted and fought for the most comprehensive Drug Control budget ever.

MAKING GOVERNMENT WORK BETTER AND COST LESS
Already cut the Federal Workforce by over 200,000 -- on the way to lowest level in 30 years.
Abolishing 16,000 pages of obsolete regulations and rewriting 31,000 more pages.
$58 billion in savings are already in the bank. $46 billion in savings are still to come.
Over 180 new recommendations will save $70 billion. Eliminated 284 federal advisory committees.
Developed government-wide Customer Service Standards for the first time.
Appointed the most diverse Cabinet and Administration in history.
Signed the most important federal procurement act ever to streamline government purchasing.
Reformed Pension Benefit Guarantee Corporation to protect 8.5 million pensions.
Signed the Unfunded Mandates Reform Act, March 22, 1995.

CREATING OPPORTUNITY IN AMERICA'S COMMUNITIES
Created nine Economic Empowerment Zones and 95 Enterprise Communities.

Signed the Community Development Banking Financial Institutions Act, Sept. 23, 1994.
Signed the Interstate Banking Bill, September 29, 1994.
Instituted the Defense Reinvestment and Conversion Initiative.
Reformed the Community Reinvestment Act to focus on performance rather than paperwork.
Made the Low-Income Housing Tax Credit and Mortgage Revenue Bond Program permanent.

PROTECTING THE ENVIRONMENT AND OUR PUBLIC HEALTH
Issued a new executive order to require polluters to disclose information to the public and expanded the public's right-to-know about toxic releases.
Launched "reinventing environmental regulation" to cut red tape and better protect public health.
Issued a new standard to cut pollution from chemical plants 90% by 1997.
Signed executive orders to increase recycling and cut pollution in federal buildings.
Signed the California Desert Protection Act, October 31, 1994.
Issued a new standard to cut pollution from incinerators 95%.
Introduced comprehensive Safe Drinking Water and Superfund reforms.
Developed a plan to restore Florida's Everglades.
Ended decades of conflict over the allocation of California Bay-Delta water.

PROMOTING HEALTH CARE FOR ALL AMERICANS
Passed the Family and Medical Leave Act, February 5, 1993.
Signed a comprehensive Child Immunization Plan.
Revoked the Reagan/Bush restrictions on abortion counseling ("the gag rule"), abortions in military hospitals, "Mexico City" policy and RU-486 imports.
Increased Ryan White CARE Act funding for outpatient AIDS care over 100% in first 3 budgets.
Put the Women, Infants and Children Program (WIC) on a full-funding path.
Increased funding 65% for breast cancer research.
As part of the balanced budget plan, introduced health care reform initiative which strengthens Medicare and expands coverage.
Proposed a $1.3 billion increase in veterans' benefits -- of which $1 billion will be directed to the VA health system to provide treatment for 43,000 more veterans.

PRESERVING AND STRENGTHENING OUR FAMILIES
Expanded the Earned Income Tax Credit providing tax relief for 15 million working families.
Introduced the Work and Responsibility Act - comprehensive welfare reform.
Passed the Family Support and Preservation Program.

Passed major funding increases for homeless programs in both Houses.
Approved 35 waivers to states permitting comprehensive welfare reform demonstrations.
Collected a record $10 billion in child support through enforcement in 1994.
Signed the Social Security Independent Agency Act.
Increased adoption and foster care funds by almost $600 million from 1994-1995.

RESTORING TRUST IN OUR GOVERNMENT
Signed the National Voter Registration Act (Motor-Voter), May 20, 1993.
Eliminated the tax deduction for lobbying expenses.
Imposed strictest Administration ethics guidelines in history.
Barred top officials from becoming foreign lobbyists after leaving government.
Signed the Lobbying Disclosure Act of 1995 -- the first overhaul of lobbying rules in 50 years.
Fought for passage of and signed into law the Congressional Accountability Act, January 22, 1995.
Fought for passage of line-item veto and campaign finance.

OPENING FOREIGN MARKETS TO AMERICAN GOODS
Signed NAFTA into law, December 8, 1993, which will create hundreds of thousands of US jobs.
Signed GATT into law, December 8, 1994, the largest trade agreement in history.
Secured free-trade commitments from Asia-Pacific Economic Cooperation (APEC) leaders.
Hosted Summit of the Americas and agreed to negotiate a Free Trade Area of the Americas by 2005
Developed National Export Strategy, eliminating outdated export controls on $35 billion in exports.
Opened 15 different market sectors in Japan ranging from telecommunications procurement to rice.
Reached historic agreement with Japan on opening its automotive market to billions of dollars worth of American cars and parts.
Reached agreement with China to provide intellectual property rights protection for billions of dollars worth of U.S. exports.

AMERICAN LEADERSHIP
Helped Israel and Jordan achieve an historic peace treaty and Israel and the Palestinians fulfill their historic accord.
Contributed to an historic cease-fire in Northern Ireland.
Restored democratically elected Haitian President Aristide to power; will continue to stop the flow of refugees to Florida.
Undertook, with NATO allies and UN, military and diplomatic actions to alleviate the suffering and lead the effort to broker a comprehensive peace agreement in Bosnia.
Russian nuclear missiles are no longer pointed at our cities.
Persuaded Ukraine, Belarus and Kazakhstan to give up the nuclear

weapons left on their land when the Soviet Union collapsed.
Agreed to framework with North Korea that freezes and leads to the eventual elimination of North Korea s dangerous nuclear program.
Led the international effort to secure the indefinite and unconditional extension of the Nuclear Non-Proliferation Treaty (NPT) further reducing the danger of nuclear proliferation around the world.

Working to prevent nuclear weapons from ending up in the hands of terrorists or international criminals.
Air-lifted more than half a ton of vulnerable, highly enriched uranium, enough to make dozens of nuclear bombs, from Kazakhstan to safe storage.
Assisted South Africa's transition to democracy, providing support for elections and development.
Bringing the nations of Europe closer:
-- Modernizing NATO;
-- Working with Russia;
-- Reforming the former Soviet Union economies

Waging a tough counter-terrorism campaign with stronger laws and more training for law enforcement.
Maintaining strong sanctions against states that sponsor terrorism and defy the rule of rule, such as Iran, Iraq, Libya and Sudan.
Sent our planes, ships and troops to turn back a new Iraqi threat to the Persian Gulf.

++

ON BEING A REPUBLICAN

Our Washington DC correspondent writes:

Folks, this came over the internet; I cannot vouch for its authenticity.

From the NY TIMES op-ed page, July 26, by Daniel Mendelsohn

The startling discovery that affiliation with the Republican party is genetically determined, announced by scientists in the current issue of the journal Nurture, threatens to overshadow the announcement by Government scientists that there might be a gene for homosexuality in men.

Reports of the gene that codes for political conservatism, discovered after a long study of quintuplets in Orange County CA, has sent shock waves through medical, political and golfing communities.
Psychologists and psychoanalysts have long believed that Republicans' unnatural and frequently unconstitutional tendencies result from unhealthy family life - a remarkably high percentage of Republicans had authoritarian, domineering fathers and emotionally distant mothers who didn't teach them how to be kind and gentle. But biologists have long suspected that conservatism is inherited. "After all" said one author of the Nurture article, "It's quite common for a Republican to

have a brother or sister who is a Republican."

The finding has been greeted with relief by parents and friends of Republicans, who have tended to blame themselves for the political views of otherwise lovable people - their children, friends and unindicted co-conspirators.

One mother, a longtime Democrat, clasped her hands in ecstasy on hearing of the findings. "I just knew it was genetic," she said, seated beside her two sons, both avowed Republicans. "I just knew nobody would actually CHOOSE that lifestyle!" When asked what the Republicans' lifestyle was, she said, "Well, you can just tell from watching TV, like at the convention in Houston: the loud outfits, the flaming xenophobia, the flamboyant demagogy--you know."

Both sons said they had suspected their Republicanism from an early age but did not confirm it until in college, when they became convinced it wasn't just a phase they were going through. Despite the near certainty of the medical community about Republicanism's genetic origins, troubling issues remain. The Nurture article offered no response to the suggestion that the startlingly high incidence of Republicanism among siblings could result from the fact that they share not only genes but also psychological and emotional attitudes, being the products of the same parents and family dynamics.

And it remains to be explained why so many avowed Democrats are known to vote Republican occasionally--or at least known to fantasize about doing so. Polls show that at three out of five Democrats admit to having had a Republican experience. In well-adjusted people, however, this experimentation rarely outlasts adolescence.

Surprisingly, some Republican activists hail the findings as a step forward rather than as an invitation to more conservophobia. They argue that Republicans didn't "choose" their unwholesome life style any more than someone "chooses" to have a ski-jump nose, they shouldn't be denied civil rights to which normal people are entitled.

Other Republicans, recalling 19th century scientific studies that "proved" the mental inferiority of blacks find the frenzied search for the biological cause of Republicanism pointless if not downright sinister.

But for most real Americans, the discovery opens a window on a brighter tomorrow. In a few years, gene therapy could eradicate Republicanism altogether. If conservatism is not the result of sheer orneriness (as many suspect) but is something Republicans can't help and probably don't even like, there's no reason why we shouldn't tolerate Republicans in the military or even high elected office - provided they don't flaunt their political beliefs.

4240. Re: Wire antennas: free lunch?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-04 00:00:00 UTC
From: njradiodude@aol.com
Message-ID: <20000804035605.00958.00000035@ng-fy1.aol.com>
Source record: 105753

...Yes. It's all true. If you have the ability to hang wire, hang it.

Over the 12 years I've been hamming, I've had many wire antennas, and had very good success with ALL of them.

In 1989, I lived in a 3rd floor apartment of an 18 unit building. I had a 75m 1/2 wave dipole hung. 14g black insulated wire, a flat black painted black co-ax fed center insulator. It was put up late at night and not used for nearly a week. When used, I was lucky...no RFI complaints. No one even noticed (or said anything to the live-in building owner) until I was seen taking it down when readying to move out. I worked the world on that thing. I now have a 75/80m 1/2 wave dipole, a 40m 1/2 wave inverted V, and one for 17m.

Mobile antennas will work, but not very efficiently. Even if you work out the ground (counterpoise) difficulties, they tend to be compromises in and of themselves and not terribly broadbanded in the lower frequencies.

I love wire. Wire is cheap. (a 500ft roll of 14awg solid wire goes for around $25.00 depending on where you go. I get mine at Home Depot). Wire works. Hang wire! You'll love wire too. I have a tri- bander (unassembled) sitting in my garage since I moved to where I am now. I have such good luck with wire, although in some cases it might be better, the beam can wait for now. My R7 works well. My wire works very well.

If you rent and can convince your landlord/super to allow a small black wire in the air, the feedline entering the window might be the most noticable part. Go nuts!

73 and good luck

Goshgollygee, and I 've heard that current conditions are actually
the result of the former work done by former office holders, not
necessarily attributable to the leader at hand.

For instance, damage Klinton has done may be wrongly pinned on
his successor by "finger pointers".

Also, if what you claim is true, then at least Daddy Bush and Cheney
are there. With Klinton and Gore, its all deny, deny, deny, with
no one to pick up after them, except the American people. (of which,
a greeeeeeaaat deal is verrrrry tired of doing just so.)

At this point, _anything_ is better...trained ape, bloated sack of
protoplasm, etc.

4242. Question: Are there projects for "Cheap wireless Internet" ?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-04 00:00:00 UTC
From: infstar@infostar.de
Message-ID: <post-000009@equium-110659.winews.net>
Source record: 105755

Hi specialists in APR,

I know a lot about Internet, but nothing about Amateur
Packet Radio, so please forgive me a newbie question here:

Spending a vacation in a very large but poor country brought
up the idea to help these people to improve their communication
with a special kind of wireless data communication.
(The country has _no_ phone lines ! It is too large. And no chance
for mobile phones)

The idea would be (in short):
Give the people _very_ inexpensive PCs, a wireless unit (short wave?)
and an antenna - then they can begin to exchange eMail, News and
receive other kind of information (broadcasted news, ...)
Speed is not important.
Special frequencies could be used because the government would
support the project.

My question:
This idea is so simple, that others are surely already working on it.
Could you please point me to some URLs or people which could
be contacted to learn more about such projects and how to adapt
them to specific countries?

TIA
--

>Clintons are a foul, stinking cancer on this society.

Yeah, I'm sick and tired of all those 'Help Wanted' signs darn near in the roads blocking the view in most cities and cluttering up the newspaper's want ads from New York to LA. I'm sure when DuhhBya takes over those ads will disappear and we'll save a *LOT* of TREES .. Who says Republicans aren't TRYING TO SAVE THE ENVIRONMENT ? ;-)

Lloyd, I have a serious question for you. If you're really a prophet of God, why advertise it in your username? A true man of God can stand on his own, and people will recognize it and flock to him. It is only the false ones who have to push themselves on people one way or another.

Jesus did nothing to advertise his "status." His mere Presence was enough... people KNEW they were in the presence of Holiness just by his Presence. Why do you feel you have to jump up and down and scream about who you believe you are?

Why don't you give that a little thought, tone down your posts, post under the name "Lloyd" instead of "Prophet Lloyd Davies," and rejoin the human race? People might even like you if they knew what you were really like underneath all that huffing and puffing, who knows?

Anyway, if I ever met you at a hamfest, I would be happy to have a cup of coffee with you.

Take Care,

W.

Look past the ego, and you will see,
what dwells within is God, not "me."

I'm not a lawyer, but here's my take on it: First, there are no provisions that I know of for a non-ham to operate a ham radio station for ANY reason; it is ILLEGAL, period. Second, the "necessity defense" is generally applicable, IN COURT, as part of a body of evidence to exonerate a defendant who does something normally illegal, in an emergency, to prevent or alleviate death, serious injury, or perhaps major property loss. In other words, you make your judgment call in each individual situation and place yourself under the judgment of the court to see the necessity in the same perspective as you saw it.

:
: It is true that GNU had it's root in Unix, but many GNU applications
: have been
: ported to WinTel such as GCC, emacs, vim, bash, etc.
:
: But the idea isn't to be Unix based, Window Based, MAC based or VMS
: based but
: CORBA based. CORBA isn't tied to any one OS, architector, language or
: machine.
: CORBA routes object request via an ORB (Object Resource Broker) which
: talks
: to another ORB which does the work and returns the results.
:

I have been thinking about this thread since it started. The value of a ham API for radio hardware is great. Some manufacturers will follow right away, others will remain proprietary until hams start expecting/demanding a compatible interface. The idea of using CORBA at the equipment level is bad. CORBA is too heavy for this class of imbedded application. The processing load is sufficient in many radios to force the manufacturer out of using a lower-cost processor. Compare Gnome, a CORBA-based windows manager, to KDE. KDE performace is much better because of the CORBA overhead. Note that KDE is slowing moving towards a CORBA standard, but that move has happened only after the "economy" PC moved past the 500 MHz speed mark.

The value of an object-oriented and network-centric API layer above the equipment layer makes more sense. Look at the OSI or other network layering and you will see that the ethernet card does not need to support a protocol as heavy as CORBA. Let the hardware have a common API, but put the object packaging above the equipment layer. If you want a unified CORBA solution, you can design a box to fit in between the radio and the network that supports CORBA or some other object model. With a common API, the box will always work. A well-designed box could have outputs for ethernet, tcp/ip packet, ppp, IR, wireless IP, or a proprietary scheme. This approach opens all the same doors, lets the manufacturers keep their 4-bit processors, saves the manufacturers from having to invest too much engineering time meeting the CORBA standard, and opens up a new market for the CORBA interface box.

>
> Yessir: We all can learn a lot from that man; we need to elect him.>>>>>>>>>

Ordinarily I'd shred this post by going into the topic of "Dubya's" policy of INCLUSION which contradicts his newly concocted image 100%. " Texas for Jesus" which of course excludes Jews, Moslems, Agnostics, Atheists and every other religion that doesn't recognize Jesus's divinity and there are more that don't than do however be assured that I have no intention of contacting the poster's server to lodge a complaint. AMERICANS WHO LOVE FREEDOM OF SPEECH DON'T PULL THAT KIND OF BULLROAR!

Last night someone on this board contacted MindSpring News about yours truly and in turn they contacted me. Don't get me wrong; it was NOT a threat but rather advice. I was told, more or less, that this newsgroup was for ham radio related subjects and there were more suitable groups for politics etc. Furthermore they said that "out of sorts" postings could constitute flaming.

My reply? Courteous and gentlemanly as expected. I wrote the following:
>>>>>I am a ham radio operator and over 31 years in the hobby I have come to realize that hams are multi-dimensional.

Quite often on the air we hear discussions about politics, sports, religion and other controversial and non-controversial subjects therefore never did I think I would be targeted for expressing my personal opinions about politics on a ham radio newsgroup

I assure you that whomever lodged a complaint against me was NOT a political neutral but rather a Republican Conservative who hates me and my opinions however being a proud American, never under any circumstances would I run to the opposition's server and complain so loudly that that server would admonish or warn him.

May I ask you this: where do strong opinions end and "flaming" begin? Furthermore rec.radio.amateur.misc has been well known and admired for allowing just about every type of subject to be broached therefore I am interested in knowing if your reminder represents a general or specific crackdown?

At any rate, I am truly fond of MindSpring/Earthlink and will respect your wishes. Will you recommend a newsgroup whose adherents enjoy debate on many topics, who respect freedom of expression and are not apt to go complaining to the servers of those posting challenging items?

This morning I received the following:

Hello Charlie,

Thanks for the response.

> Quite often on the air we hear discussions about politics, sports, religion
> and other controversial and non-controversial subjects therefore never did I
> think I would be admonished for expressing my personal opinions about
> politics on a ham radio newsgroup

I would imagine that you hear all sorts of discussions while on ham radio and to relay some of those discussions on this particular newsgroup is not out of line. But what evolved here is straight political discussion, not essentially related to ham radio as perhaps your first articles were. That is off topic for the group.

I would suggest taking this particular discussion to some alt.politics.* newsgroups. Here is a good link to see what newsgroup would be most appropriate for your topic:
<http://www.newsville.com/news/groups/alt.politics.html>

One's political preferences are not the issue here. Usenet is a great place for discussion and expression of one's beliefs. However, in order to keep Usenet a usable medium, we do enforce our AUP which states that customers need to comply with the FAQ, charters or community standards of each newsgroup. All we ask is that you take discussion to the most appropriate place.

I hope this information and the link help you out. Newsville is a good site to scan current newsgroups. I appreciate your attention in this matter.

Regards,

As you see, the people at MindSpring are courteous, not insolent. Folks, it's an excellent ISP. It's now Earthlink, led by Sky Dayton since MindSpring President Charles Brewer resigned. If you're dissatisfied with your server, look into it. This was an unsolicited unpaid advertisement.

Thank you.

But after sending my initial reply last night, it IT HIT ME. I WAS right once but now WRONG. Ham radio is no longer what it was. WE HAVE BIG BROTHER WATCHING and quite frankly I'm not so sure it isn't part and parcel of the Clinton administration however the whole thing gives me reason to sit back and really mull over the situation.

Now before some of you start yelling, "It's the Democrats..it's the Democrats," my feeling is that that represents GENERALIZATION. If anything, it may be a result of ONE Democrat who'll be saying goodbye on 1/20/01 and guaranteed if Gore wins, there'll be a MAJOR SHAKEUP and naturally that goes for G.W. as well but with tremendously more impetus.

Please look at my response again and tell me if I was incorrect by saying that radio hams are multidimensional? Did I miscategorize us? WAS I wong in assuming that ham radio WAS more than a quick QSO, please QSL and 73? Perhaps my view is a bit narrow because my main interest was THE hot spot of 14.313 on which EVERYTHING was discussed and although CONTROVERSIAL, it was GREAT! The BARF against the world and it was a whale of a shootout. But now it's over. I guess Riley feels that ham radio is saved. I say maybe but I sure as hell am positive that freedom of expression is LOST. And who knows but perhaps a tinge of that suppression is now inching into the American side of the Internet? It's mere speculation but nonetheless I sense something's happening.

Alright fellow hams, friends and foes, why did I broach this entire subject? Afterall it affected just me and MindSpring, right? Wrong. IT COULD AFFECT EVERY ONE OF YOU because how sure are you that your server will not respond similarly when a guy dislking you or your politics will go running and complaining to it? So keep in mind that even though hams by nature are intelligent and would like to express their views on many topics, they shouldn't do it on rec.radio.amateur.misc according to MindSpring. Remember-your server may think exactly along the same lines!

Am I angry at MindSpring? No because they didn't come at me with barrels blazing, threatening with clenched fists. And besides it's their show anyway-I just pay the price of the ticket to get in. I guess my anger is at myself who replied as if ham radio was still the model of free speech and "robust discussion"(I think I heard someone use that term). Instead it's become, "Did you know that Grandpa Isaac went to the doctor today to have his prostate massaged?" Or, "Hey you...send card. Me collector...grunt and belch"

And so what say ham friends and foes? Wanna limit "wreckradio" to blivotry electronics and ham ISSUES or flame it a bit? We have an election coming up and it's going to be a nasty campaign. You ham Dems and Reps want to mix it up? Or perhaps you want to say something about the love affair between Davies and shortwave's popular screwy prophet Brother Stair? I mean there's a lot of things intelligent hams can toss back and forth unrelated strictly to electronica.Why don't I simply attend the group recommended by MindSpring? Because they're all strangers. Heck, you guys, friends and foes,

are family to me because for 31 years ham radio's been family too. And hams are BRIGHT. I like bright people and good down to earth debates are cathartic.

If yes, lead the way. If not, then AF2Y will cease CREATING political posts in keeping with MindSpring News's policies but will reserve the right to respond to them while allowing the other guy's server to take action if so inclined.

Doc,AF2Y

4260. This weeks Scanner Dweeb comic (Aug 5)

POLITICAL STATEMENT: Ham Radio activity as based on your First Amendment right of free speech and freedom of assembly. When the state/local cops begin pulling you over for no apparent reason other than just because you have lotst of antennae on your car it is time to take a stand and speak up in defense of your rights. I have done so with the following email. I hope you will understand the reason I post here and not flame me. In defend my own right I am defending your right to participate in the same activity.

The following email is from Senior Advisor for Judicial & Criminal Justice, Asst. Legal Counsel, for the Governor of South Carolina in response to my complaint against a SC Highway Patrol officer.

www.fbi.gov/programs/civilrights/statutes.htm#section245
http://www4.law.cornell.edu/uscode/18/242.html

BACKGROUNDER:

I am a merchant seaman with a home of record in the state of Arkansas. I had just completed an ocean voyage and was returning to Norfolk (place where my union all is located) from Florida, driving my own car.

INCIDENT OF COMPLAINT:

On 17 July 2000 at about 8:15 PM, Officier J.L. Lawson (Badge #461? or 46T) in an unmarked SC Highway Patrol (SCHP) car passed me on I-95 in Clarendon County, South Carolina at a excessive high rate of speed, WITHOUT flashing lights or siren! He apparently was answering a back-up call to a location on the Interstate just up ahead as he was passing me. I was in the right lane. He passed in the left lane. I assume he noticed the two mag-mount antennas on the trunk of my 83 Ford Crown Victoria and one mag-mount antenna on the roof. I drive with a dual-band VHF/UHF

ham transceiver and a scanner (of which I mostly to listen to TV News while on road trips).

QUESTION: When a South Carolina State Highway Patrol Officer is responding to a request for back-up by a fellow SCSP officer, is the responding officer required to display the flashing lights of his "unmarked" car as he exceeds the posted speed limit speeding to the scene? If he is required to display flashing lights and sound his siren as he exceeds the speed limit and he does not display flashing lights and does not sound his siren is he violating South Carolina traffic laws? Does a U.S. citizen have the right to issue a traffic ticket to the officer? Or must the citizen file a lawsuit against the officer?

CONTINUING: I soon arrived and passed the scene of the reason for the back-up call, an apparent speeding ticket being issued). Officer Lawson's car was not at the scene. (He would later explain that another officer had arrived at the scene, fulfilling the back-up need. He continued on to the exit and waited for me to pass).

As I continued on I-95 Northbound I passed an exit at which time I saw Officer Lawson's car proceeding down the on-ramp from that exit onto I-95 Northbound. He accelerated enough to catch up and follow me for several miles.

FACTS: I was not DUI drugs nor alcohol. My driving speed was under cruise control set at 65MPH. The posted speed limit was 70MPH. I presented no probable cause to the officer to pull me over based on my driving.

During this "following" (running my license plate through NCIC?) he again accelerated, lane-changed into the left lane, to be parallel with my car, where he then inspected my car. My front left quarter panel was crumpled from a previous incident when my car was lawfully parked in a parking lot and a 17-year-old boy going to a prom backed into my car and left the seen. This incident was judiciously resolved.

Once the officer did his "drive-along" inspection he fell back behind me and resume his "following." WHY?

I was not speeding. In fact, I had my cruise control set to 65 MPH when the speed limit was 70 MPH. Is driving UNDER the speed limit somehow suspicious now? I was not impaired in my driving by alcohol, drugs, or fatigue. The only reason I can deduce as to why Officer Lawson was so acutely interested in my car was the fact I had "a lot of antennas" on my car.

He followed me for 15 to 20 minutes until I noticed I was low on gas and turned on my right turn signal prior to taking the next exit. It was then, when I entered the off-ramp that Officer Lawson turned on his flashers and pulled me over.

During the roadside interview I asked Officer Lawson what it was exactly that prompted him to follow me, was it because I had antennas on my car?

He avoided answering the question specifically but only gave a "policy" answer to make sure I wasn't fatigued (driving for lack of sleep, at 8:00 PM, at dusk?). I can recognize a B.S. answer when I hear it and this was a B.S. answer. Officer Lawson even admitted my driving was flawless while he followed me except for one moment when he alleges that I reached to scratch the back of my head and alleges that I had slightly swayed in my lane, swayed only an inch or two, not even getting near the lines of the lane. I could not recall that moment. And this, he admits was "awhile back" in distance from where he pulled me over. The other reason he gave was "quota" and as a temporary visible deterrant for other drivers passing by, to see the SCHP at work!

Officer Lawson issued me a "warning ticket" for "Other Violation: Lane Usage". (Ticket Number X-068324). I view this ticket as harassment simply because the officer thought my mag-mount antennas were suspicious. The officer could clearly see my Amateur Radio Relay League's "SKYWARN" decal on my rear window, left side. Unless of course driving under the speed limit has somehow become suspicious the officer had no probably cause to pull me over. When I pursued questioning the officer he retorted (threatened?) to give me a real ticket so I can dispute it in court. The officer covered his obvious disdain for vehicles having extra antennas with professional and courtieous conversation, mentioning he knew amateur radio operators. As far as I am concerned this ticket violates: Title 18, U.S.C., Sec. 1018. Official certificates or writings:

Whoever, being a public officer or other person
authorized by any law of the United States to make
or give a certificate or other writing, knowingly
makes and delivers as true such a certificate or
writing, containing any statement which he knows to
be false, in a case where the punishment thereof is
not elsewhere expressly provided by law, shall be
fined under this title or imprisoned not more than
one year, or both.

Does Officer Lawson reflect South Carolina State Police's policy about "out-of-state" vehicles with amateur radio antennas traveling the Interstate system through their state? Again, I reiterate my complaint that the officer had no probable cause nor did he have reasonable suspicion to follow me for the 20 minute duration and subsequently issuing the warning ticket. I feel it to be harassment for exercising my First Amendment Right of free speech and freedom of assembly (communicating via amateur radio).

I would be ever so greatful to receive information from anyone that corrective action will be taken?

Out of consideration for those on the other side of the isle. The belief statement below has been created to help those that wish to become better democrats. Just recite twice daily.

I, as a good democrat, believe

a. that Margaret Sanger & Gloria Steinmen are more important to Am. history than Thomas Jefferson, Robert E. Lee or Thomas Edison.

b. that standardized tests are racist, but racial quotas and set-asides aren't.

c. that homosexual parades displaying drag queens, transvestites and bestiality should be constitutionally protested while manger scenes at Christmas and the 10 Commandments in your classroom should be illegal.

d. that AIDS virus is spread by lack of federal funding and not lifestyle.

e. that global temperatures are less effected by cyclical, documented changed in the earth's climate and more effected by yubbies driving SUVs.

f. that the NRA is bad because it supports certain parts of the Constitution, while the ACLU is good because it supports certain parts of the Constitution.

g. that taxed are too low, but ATM fees are too high.

h. that the military, not corrupt politicians, start wars.

i. that self-esteem is a gift to students from teachers and not something that is individually earned.

j. that hunters don't care about nature, but activist "greens" do.

k. that businesses create oppression and government creates prosperity & jobs.

l. that capital punishment is evil while abortion on demand at any point in pregnancy is good.

m. that gender roles are artificial but being homosexual is natural.

n. that guns in the hands of law-abiding citizens are more of a threat to your safety than nuclear weapon technology in the hands of Chinese communists.

o. that government knows how to raise your children better than you do.

p. that Al Gore invented the internet.

Virtually anyone can be a democrat. Just quit thinking; and then, vote that way.

And don't forget these things President Clinton has brought us.

1. He was impeached.
2. He lied to the American people.
3. He brought a new meaning to the words "sleaze in government".
4. He has gutted the American Military and made it a "meals on wheels".
5. Received campaign funding from the Communist Chinese.
6. Allowed the transfer of missle technology to the Chinese.

You know the rest Chipster, now don't ya?

Have you wondered why the latest peace talks over the middle east have fallen apart? Let me ask this then...would you believe a man like that? Think about it. And thank whatever God you believe in that Clinton wasn't on watch when we had WW2 or when Reagon outfoxed the commies. Its called creditability Chipster...he ain't got it, which means the United States ain't got it either. Dig it Chipster? The man is a sleeze. Period.

Hi Andy and group,

You bring up a lot of good points. CORBA is quite a heavy has the press
has made it out to be. Of course anytime data marshaling and network
protocols are added to an apps things will slow down a little. One of
the
problems so have had with CORBA was they tried to do too much with
CORBA.
i.e.: "Let's make CORBA wrappers for all of our API". Never the less
your points is very well taken. I could also be wrong about this and
CORBA is a total dog. At any rate, I like the concept behind CORBA
even if it isn't the finally solution.

I think I understand your interface box, but could be the same
system as the users PC. Which was how I was trying to lay out
the example. Each PC had a server ORB(s) to manage one aspect of the
station. As you say this solution would take us a long ways to
proprietary and driver independents without moving any intelligence
to the radio. This will come. My hope is that if we can form at
standards forum we can kept one vendor from trying to rule the world
and kept everything open.

Andy I like your attitude! It is refreshing to have someone not
only points out problems, but offer other solutions. Your comments
are most welcome!

that's your choice!

this is amateur MISC. Get it? Miscellaneous. Just as you can hear any number of discussions on the air, I think the same should apply in rec radio MISC. I could be wrong, some will definately say so, but for any licensed amatuer, actually anyone period, to have his opinions stifled in this NG because someone doesn't like it - well it just isn't right. This NG is open to MISC topics and discussions. I know, I know, ones that pertain to amateur radio. Well, just as enforcement, local government, covenants, conventions, and restrictions, etc., etc., pertain to and affect amateur radio so do politics. If you don't like it ..... and that's my Opinion.

I agree with you Tim. This group should be open to ALL matters that
are of interest to Amateur operators. There is no moderator and we
certainly don't need big brother Riley and his narrow view of what ham
radio should be on here. So I think Mindspring needs a attitude
adjustment.

Riley has managed to turn Amateur Radio into a sunday school
gathering. Everyone is afraid to say what is on his mind. Just like
it used to be in the 50s and early 60s. Those were the days we were
afraid to say the "D" word or we would get a pink ticket. Hopefully
this won't last much longer and he and his Democratic crew will be gone
soon.

And to the fool that bitched and moaned about Doc. If you can't handle
the discussion and the heat, then get out, your out of your league.
Your probably one of those goofs on HF that when he didn't get his way
resorted to jamming the frequency. You miss the good ole days eh OM?

We don't need this same attitude forced on us here in r.r.a.m, or
anywhere else on the internet for that matter.

> owner & licensee informed?

I answered that already Corky-John. Why bother Jon? What difference would it have made? You still are a repeater jamming and burning up fool. Telling the owner would do nothing, but I will mention it to him if that makes you feel better Corky-John. Still doesn't change what you did and what 4 hams heard you do. Lie on little boy.

Anyone who memorizes the test material van become a VE. You are proof John-Corky. BAWAHAHAHAHHAHA. That is all you have to offer up as an example of your sucess. VE and OO. BAWAHAHAHAHHAHAHAHA! You left out traveling nurses aide John-Corky. Why do you always try and hide that part of your life. Ashamed? Still trying to hide those molestation of the elderly charges? Why do you hide this aspect of your life Corkey-John?

>YOU are just jealous of my status & responsibility!

What status and responsibility is that Corky-John? Your status as the most offttopic poster (389 a month average) on this NG? Your responsibility for stalking many? No, you have done and possese nothing that I nor any person could desire. You are a freak.

> Glenn Hansen, KB7PKC, you are just a LIAR trying to cause problems.
> (Do I need to re-post that message you put on rec.radio.swap 4 years ago
> to demonstrate your true desires??)

Ahh, Corky-John threatening me with a forged message his buddy Petey posted 4 years ago. Go ahead John, go for it. It will only demonstrate for the

newer users what a loser you continue to be. Desperate action by a desperate Corky-John Mackey.

How many repeaters have you smoked today Corky? How many repeaters have you claimed to own that aren't your today John-Corky Mackey?

Bingo. This is an _unmoderated_ ng. That's not to say it's a free for all, but _come on_, we have a contoversial election coming up, and as hams, folks are going to "discuss". =)

Some posts can be lengthy and tiresome, but I can't say to your ISP that you should be censored if I disagree with them, or don't like them. Most other places on the planet we can't say what we think/feel without [possibly serious] repercussion(s). We can't run thoughts or ideas "up the flagpole" to see how/if they wave.

Enter .misc on UseNet, stage left.

If this wasn't about a .misc ng, this could be a different matter, and a "redirection" of certain postings might be in order. I believe that UseNet is a Good and Wonderful Thing; that it _should_ be taken seriously, and not allowed to have "interpretive" charters, but that is what .misc is for.

Let the fur fly! =)

>Are artificial grounds worth buying in the event I cannot find a real
>ground? I want to hear a debate on this.

Dear Jason,

An Artifial Ground is essentially a series resonant circuit tied from the chassis of the rig or ATU and connecting at the other end to either nothing or to an earth rod - preferablly, the earth rod for the typical application.

The typical application is to bring the chassis of the rig and ATU to zero RF potential with respect to ground.

It accomplishes this by providing a minimum impedance path from the rig to earth. A series resonant circuit can be quite long physically but offer near zero impedance between the end points. Just using a length of wire alone is usually not effective because the length of wire alone will offer an impedance that is a function of its electrical length. When you tune the length of wire (an artificial ground) to resonance you have made the overall circuit look like a half wavelength or multiple thereof.

The instrumentation provided with artificial grounds usually provides you with an indication of the RF current flowing through the artificial ground. When it is tuned for maximum RF current at the frequency of operation, then it is presenting the minimum impedance from the rig to the earth, thus minimizing the RF potential of the rig and ATU.

This can be effective in those cases where the nature of the antenna, its transmission line, and the station grounding is such that the rig becomes "hot" with RF. The most flagrant example of this is when you are on a higher floor and are using a Marconi type antenna. Under those conditions, the entire rig can be at hundreds of volts above earth potential. The use of an artificial ground can make that situation more livable, although the combination of a Marconi type antenna (end fed, or vertical, working against ground - as opposed to a Herzian or balanced dipole antenna) with the rig not well earthed is a very undesirable situation at best and should be avoided.

>declared, kindly tell me in your opinion what is the lesser of the following
>unspeakable anti-Christian happenings.
>
>Bill Clinton getting fellatio or Mary Cheney giving cunnilingus?

Mary Cheney is (there's that word again) the lesser, of course - she has absolutely nothing to do with politics (we are concerned about the presidency & our country) except that the socialist democrats keep bitching about her sexuality - why? To take the heat off of the idiot we have in the highest office in the land. Funny thing is, they, (the socialist democrats), are supposed to be sooo open minded. If they are, what's "their" problem" with Mary Cheney".

Hey, the cheap buffets most often have the best food - far better than the fast food joints. In fact, the best food I ever ate was at a buffet, next to a remote hotel, along I-65 in Alabama. Absolutely magnificant food (pork chops, chicken, roast beef, steak, etc). I will definately stop by there again the next time I drive through. I'm getting hungry just thinking about it.

There were no actions to iniate Corky-John, all the people ignored you and you went away. They called me, I got on the repeater and we laughed our asses off as some of the guys told me what happened.

> If there was substance to your statements,
> you would have done so long ago.

Again, why would we bother Jon over a simple fools action like yours. Come up here and do it a few more times and we might take issue, but more than likely everyone will laugh again. You hold a special recognition in this hobby as a fool and a liar John-Corky Mackey.

Flop goes your straw man again John-Corky. Posted and verified AGAIN, you are a liar and can never face up to the truth.

Guess its time to have Richard ad this onto the LONG list of John-Corky Mackey's lie list. How many verified lies does he have you pegged dead to rights? 36? This will make 37 Corky.

Lies go on! Corky-John!

=======
Hi Zach == for code programs see url:
http://ac6v.com/pagez.html
I use Nu-Morse but lots of other good ones there.

For grounding -- better read the 3 links at URL:
http://ac6v.com/pageA.html#LG

For 2M rigs -- you need to decide on a Handy-Talkie, Mobile, or base rig.
Too many start with an HT when they really wanted a mobile unit. But an HT
is fine if your operating habits requires it.
However HT's may suffer from intermod and insufficient low power when
operating from a car -- best try them out.

Any of the new 2M mobiles in the $169 - $189 class will be worth
considering. They are easily adapted to base station operation with a 12V
power supply. They will tolerate a high gain antenna as well. HT's are
designed to use a rubber duck antenna and some just don't cut it with a
high gain antenna.

And Dan, what you said about ham radio generally and Riley specifically is right on target. They're both not up to snuff.

Although I still do favor Gore, no one, but no one better tell me that our rights are NOT being eroded. When I used to hear it from hams, I laughed. I WAS WRONG! And the whole thing disturbs me greatly.

Furthermore although I don't like KV4FZ for a multitude of reasons, nonetheless I now feel somewhat uneasy about the FCC hammering him unmercifully. I see it this way: if Riley could have seen it befitting to send me that second letter which contained more horsecrap than the Hialeah Raceway, then JUST MAYBE Herbie has NOT been treated fairly? All we hams, ALL, must be treated fairly in a democratic republic or it ain't one.

Of course I'll now expect to get a ton of Eez saying that I'm a traitor and all that stuff however I don't care. I speak my mind. I pull no punches and am angry because I've seen a once great and interesting hobby/service go to the dogs. I've seen interesting and controversial hams MUZZLED AND LEASHED. I've watched interesting and controversial subjects become taboo.

And now I'm going to draw flack because of this statement. One of the main reasons why ham radio has become Sister Suzie's Knitting Circle is because of those hams who, when meeting Riley, BROWNNOSE and stroke him. I'm not advocating insolence or confrontation but dammit, do you expect me to believe that every ham in this nation approves of the job he's doing?

Hasn't anyone at any hamvention thought of politely taking him aside to ask, "Sir, why do you infringe our Constitutional guarantees and the Freedoms and hands off policy of the FCC seen in the opening of the 1934 Communications Act?" Instead they run to have pictures taken with him so as to seemingly make them immune from action.

I welcome replies via this group, flamefest and private E mail. A few guys I will not answer-most I will.

Doc,AF2Y

4289. PSK31 Contest Announcement

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-05 00:00:00 UTC
From: "Andrew J. O'Brien" <obrienaj@netsync.net>
Message-ID: <sooftuti4v91@corp.supernews.com>
Source record: 105650

The first annual CCCC PSK31 contest was a great success despite a few glitches with mailed award certificates. Participants from over 100 DXCC countries took place and the overall Winner P43P, worked 99 DXCC countries in the 24 hour period.

So, we will try again with the 2nd CCCC PSK31 contest. Please note the contest is supported by MixW, possibly RckRTTY and others.

Andy KB2EOQ

Announcing the 2nd Annual CCCC PSK31 Contest:

Sponsored by the Chautauqua County Contest Club and the Digitalradio Reflector

DATE: 0000 UTC September 2, 2000 to 2359.59 UTC September 2, 2000

Objectives: Have fun and work as many PSK31 contacts from around the world as you can!

Bands: 80, 40, 20, 15, and 10 m.

Classes:

A: Single Operator / All Band

B: Single Operator / Single Band

C: Multi Operator / Single TX / All Band

D: SWL / All Band

NOTE 1:

Single operator all band may also enter as a single band entry of their choice too.

NOTE 2:

DX spotting and alerting assistance is permitted in all classes.

Modes:

PSK31: BPSK or QPSK ONLY (no PSK63F)

EXCHANGES:

RST + QSO number, starting with 001.

QSO Points:

QSO with own country, 5 points.

QSO with other countries in own continent 10 points.

QSO with other continents 15 points.

Same station can be worked once on each band.

In VK, VE, JA and W, each call area will count as separate country.

Multipliers:

Each DXCC country on each band, including first contact with Australia, Canada, Japan and USA. Additionally, each call area in VK, VE, JA and W will count as one (1) multiplier on each band.

NOTE:

Stations operating from call areas other than their call ID, are asked to use '/x' for their actual call area, i.e. K5DJ/1.
Software Support for Scoring: Contest supported by Mix32 software and RCKRtty software. The contest uses SARTG WW RTTY Contest scoring format which may be supported by other contest software .

Scoring:

Sum of QSO points x sum of multipliers = TOTAL SCORE.

Awards:

E-certificates awarded to the top stations in each class, country and district, if the number of QSOs is reasonable.
Due to cost, lost mail, printing hassles, returned mail , broken computers, Murphy's law, and other difficulties , we will no longer send paper certificates via regular mail

Logs: Logs must be submitted in ASCII format Use separate log sheets for each band.
Log must show: BAND, DATE/TIME (UTC), CALLSIGN, EXCHANGE MESSAGE SENT and RECEIVED, MULTIPLIERS, and QSO points.
Summary sheet must show scoring, class, your callsign, name and address.
Multi-Op stations must show the callsign and names of all operators involved.

Please advise of any club participation, your score will be added to the aggregated score of your club.

Your comments will be very much appreciated.

Logs Deadline:

Logs must be received by October 30 to qualify.

Mail logs to:

E-mail: logs to obrienaj@netsync.net

or via regular mail to :
PSK CONTEST , Andrew O'Brien KB2EOQ, 9082 Concord Drive
Fredonia, NY 14063 . USA (NO GREEN STAMPS!!!)

Aluminium electric fence wire is excellant for long-wire
antennae, or threaded through punched paxolin makes a good open-
wire feeder.

Dirt cheap too.

Im happy to know you are now seeing what I told you many years ago. It is not just with Ham Radio that our rights are being infringed upon, its society as a whole. But that is a discussion for another forum.

As for the KV4FZ thing....again I congratulate you on begining to see my point. As you know Doc, I NEVER SUPORTED Herby losing his license. As I told you it would set a terrible precedent, and we would all suffer. I do NOT support Herby or his actions. And I would have joined in the fight and openly supported him in his fight with the FCC. Except for the group that supported him, the BARF. I could not in good conscience support that group for ANY REASON.

Now comes Riley, with good intentions but limited knowledge of what the real deal was/is. He wields his hammer on whomever he takes a dislike to, or the higher ups deam as unworthy of a amateur license. He tries one in the court of public opinion, before you even know the charges, or have a chance to defend yourself. THIS IS WRONG. Not only by LAW, but by common decency. And he does NOT SUBMIT FOR PUBLICATION certain actions he has taken, why? Because they are in the group that he openly supports. THIS IS ALSO WRONG. All or nothing should be the policy.

As for the ones that get on the air and suck-up, or shake his paw at the fests, or spend hours composing e-mails in the hopes that they will not be popped...I feel sorry for them. And why no-one has asked the really important questions of him..its simple...They have been asked, and NOT REPLIED TO. And he has LIED to us on several occassions. I have no use or respect for a LIAR.

Dan/W4NTI

Nope. Still not smart enough to know what's going on.

Warnings were on cigarette packs for years. People still smokes and still sued,
and the cost will be passed on to the consumers who continue to smoke. What
makes you think that warnings regarding RF emissions would be any different?

I've found that it's fun to change a few fields in the newsreader, just to get around those annoying kill files. Doing it with every post is even more fun.

' I'm confused. God was created in man's image? Don't you mean man was created
' in God's image. What's his name and where does he live, God not man.

You can get all the info you need at http://www.heaven.gov/. Or, you
can send an e-mail to God@heaven.gov. He usually doesn't reply
directly.

You can receive His broadcast on 999Ghz. Do not confuse this with the
broadcast on 666Ghz. That is the broadcast of the opposition. You
need to be using a scanner that works with polarity modulation. Be
sure to use the correct alignment. Your filter neads to line up so
that the horizontal polarity is in line with your latitude.
Horizontal polarity represents 0, vertical polarity represents 1. You
need to use the Aramaic character set code page. All transmissions
are in Aramaic with no compression used. You may point your antenna
in any direction. The broadcast is a non-localized phenomenon.

Oh yes, there are 3 null characters transmited every 314 characters
for synchronization. The character stream basicly goes 3 nulls
followed by 297 characters of information and then 14 characters of
error detection / error correction code.

You can get full specifications on the signal encoding from:

http://www.heaven.gov/word/broadcast.html

If for some reason you can not access the site, it means you are a
non-believer and will suffer eternal damnation after the rest of your
life.

From: mystique224@home.com
Message-ID: <398C6EC2.E9FF9A50@home.com>
Source record: 105667

I have the following:

- HP 403B Voltmeter with complete manual (Ex. cond.) $75
- Eico DMC-1 Capacitance Meter (Ex. cond.) $25
- Heathkit Frequency Counter 225MHz (Ex. cond.) $85
- Eico Power Supply 0-30 V @ 1A $10 (only goes up to about 22V
though, think someone repaired it before and modified it with a
different part) Works fine though
- RLC Variable Attenuator 0-120 dB in 10 dB steps, 50 ohm BNC
connectors, Ex.
cond. $70, Retails for $130
- Two BIRD Wattmeter Slugs 50-125MHz 50W & 100-250MHz 50W Both Used but
in Ex.cond. Both for $85
- One brand new (unused) Eimac 3CX800A7 Power Triode Vacuum Tube Bought
new for $329 will sell for $225

That is pretty much the list. They are pretty much items that I have
bought at one time and rarely use anymore. The tube was bought to retube
an HF amplifier in which the person owning it changed their mind. All
items
will be shipped 2-3 Day priority mail. Sorry I have received too many
beat up
boxes via UPS and don't use their business. Buyer pays exact shipping
charges
plus $3.00 for insurance. I will guarantee all items non DOA unless
insurance
is buyer denies insurance. Pics are available upon request. Email if you
have
any further questions.
Thanks,
James

P.S. - I will also except trade offers.

Well Dan, and Doc I have to jump in here. Not to defend Riley but to point out that your statement Dan is correct in many ways. When you said ">Now comes Riley, with good intentions but limited knowledge of what the real deal was/is.<
That's the point. The man cannot know what has transpired over years and years. He has to act on what is occuring during his watch. Although we can inform him, help bring him up to speed, you have to realize that he cannot have full understanding of past situations and occurances. Therefore, what you see as being wrong or inadaquate because of your knowkedge of past events and history of individuals and circumstances doesn't mean that Riley in any way isn't doing what is right. Believe me when I tell you that Riley is like the rest of us, concerned about amatuer radio and this country.
Now Doc, i'm glad you've realized certain things, not that it makes any difference, but there's hope for you yet.
Doc said.."
>Although I still do favor Gore, no one, but no one better tell me
>that our
>> rights are NOT being eroded.
and also
> but dammit, do you expect me to
>> believe that every ham in this nation approves of the job he's doing?

NO - but as a whole I think amatuer radio is better than it was say 3 to 5 years ago.
You cannot scream for more enforcement and not expect some heads to roll.
As one member of the "Fantastic Four" used to say ....Flame On !

4311. Open Letter to John 'Toilet Boy' Mackey, KS0F, and Usenet

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-05 00:00:00 UTC
From: Richard Kendrick <n7nt@primenet.com>
Message-ID: <398C7A60.C12BD7BB@primenet.com>
Source record: 105672
Cross-posted to: alt.radio.scanner,rec.radio.scanner,alt.fan.bill.cheek,alt.fan.john.mackey,alt.radio.parg,rec.radio.amateur.misc

Open Letter to John 'Toilet Boy' Mackey, KS0F, and Usenet

For nearly five years now John, you have inflicted your petty and vile presence on the Internet in the guise of saving it from, in your opinion, the evils of Bill Cheek. In reality, your actions have been merely a smokescreen for your real motives: the expression of your true sociopathic personality on the widest possible audience.

At first, you started with FidoNet and Bill Cheek. When you attempted to disrupt and antagonize the scanner forum with your rude and abusive antics, you were admonished by Cheek to behave or face exile from the forum. Instead, you continued your nonsense and subsequently were banished. Angered by Cheek's banishment, you followed him to the Internet where you continued to stalk and attack him.

Cheek defended himself from your attacks in the same manner and vocabulary that you attacked him. You couldn't intimidate him or your most vocal critics and resorted to rogue cancellations of their public condemnations of your actions. This cost you the loss of your account with your ISP Sprint. With a new account, you continued your rogue behavior attacking anyone who spoke out against you and your lunacy.

Cheek was arguably to most vocal of your critics and had the intellectual wherewithal to rebut your stupidity. That's why he became the focal point of your attacks. While you would have people think otherwise, this is not now nor has it ever been about Mackey versus Cheek. It's about your obnoxious behavior and the people who have publicly denounced you and have openly stated they will not tolerate your behavior.

It has been well established that you are a liar and a fraud whose sole purpose is to antagonize and abuse anyone who criticizes you and that you will resort to absolutely any means to squelch your critics. John, you are like the moron in a theater who continues to talk during the movie when others ask you to be quiet. Cheek and I share one characteristic that just riles you: both of us told you to shut up and continued to tell you to shut up when you wouldn't. Literally dozens of people have also asked you in their own way to cease your bad behavior. But yet, you persist oblivious to the scorn and even hatred people feel for you. This is the true demonstration of your sociopathic personality.

Responsible backbone Internet providers have a method of dealing with rogue ISPs called the Usenet Death Penalty (UDP). This action is reserved for ISPs that continue to allow their users to spam and otherwise disrupt the tranquil interactions of the normal users. UDP is real and has been recently used against the provider UUNet (uu.net). They were sanctioned with a UDP on August 1, 1997 for allowing their customers to spam legitimate users and were unresponsive to complaints from other backbone providers in attempts at resolving the matter.

To implement a UDP, all backbone providers refuse to allow any messages from the sanctioned domain passage through their system. This effectively isolates the offender and none of the offender's messages make it to the Internet.

John 'Toilet Boy' Mackey, KS0F has, by virtue of his behavior, earned the equivalent of UDP. As one of the most outspoken vocal critics of John Mackey, I call for a UDP against him. No matter what he says or to whom, never respond. Do not talk to him or about him.

Regardless of your opinions of the late Bill Cheek, he showed that by exiling Mackey from FidoNet, civility was restored to that forum. If we follow his lead, we can achieve a similar civility on Usenet.

It's up to us.

This Cheek individual must have kept a ton of people absolutely dumbstruck while he was living -- there is not a peep about him or by him, iirc, on this NG.

Did he leave a request to his fiduciary and minions to flood this and other NGs with all this *stuff* I've been reading?

Talk about legacies!

Talk about reaching back from the grave!

What's the secret to such charisma?

Now wait a minute. I write politics, modern politics instead of Davies's constant copy and pasting of rightwing hate, and get admonmished by MindSpring for putting intelligent commentary on a ham radio newsgroup while bellsouth allows hate trash to run wild? And believe me; it WAS posted thru bellsouth. I can't believe what's going on and am thoroughly confused by one server's attitude vis a vis another's.

4319. FS or FS + trade QRO HF-2500DX QSK Amp

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-05 00:00:00 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <398CAFEA.8481146E@cybertime.net>
Source record: 105680

Still offering the QRO HF-2500DX QSK amplifier for sale. New $2895, new asking price is $2000 or trade for Heathkit SB-220 amp plus $1500 cash. Condition is very good. Less than 50 op hours. I am original owner. Buyer pays shipping. If trade, SB-220 must be in excellent condition with low hours on tubes.
Only flaw on HF-2500 are minor scratchs on top cover front to back edges. Uses 2 ea 4CX800A tubes, grid driven. Completely self contained with ALL power supply components inside. All Peter Dahl inside with QSK Vac relay. Easily does 1500W plus with 15 to 50 watts drive depending on

band. Fully WARC band compatable. I've driven it over 2500W into dumy load to see what it can do. But at 1500W its just idling along. Two speed fan. Screen current fault circuit.

4320. Save the USA: Vote RALPH NADER for President

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-05 00:00:00 UTC
From: Charles Schumer <senator@schumer.senate.gov>
Message-ID: <tsecZAABYfddjb@news.senate.gov>
Source record: 105681
Cross-posted to: japan.test,rec.radio.amateur.misc

5 Aug 2000 23:59:10 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine

sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting with how we live our lives, taking small, unilateral steps toward peace in everything we do. Green politics requires us to be both tender and subversive. Affirming tenderness as a political value is already subversive. In Green politics, we practice tenderness in relations with others; in caring for ideas, art, language, and culture; and in cherishing and protecting the Earth. To think Green is to build solidarity with those working for social justice and human rights everywhere, not bound by ideologies."

-Petra Kelly

Guys,
alt.radio.scanner. flame-fest seems to be picking up; hopefully it'll not peter out.
Look, if you Elephants want to knock the Donkeys and vice versa, that's the place. Come on folks-maybe MindSpring was right in ADVISING that I myself take political posts on a ham newsgroup down the road? And how sure are you that one or more" ham only" guys will not complain to your servers? And it will make no difference to those servers regarding free speech and the MISCELLANEOUS in the URL. If they say "MOVE IT, you will.
Of course there are some excellent political newsgoups like
1. alt.politics.democrats.d
2. alt.politics.republicans
I'm sure your servers offer them all. The reason I'm appealing to you is because YOU HAVE MUCH TO SAY; WE ARE ALL HAMS and WE ARE FAMILY even though we despise one another.
I stocked up on mud pies all ready to throw at the Bushites and take note of letters 3,4,.5 &6 if you get my drift.

Suppose instead of an "artificial ground device" we use two pieces of wire
to
ground, one of any given length, the other one half of that given length.
It seems
to me that at any given frequency, if one wire presents a high impedance
patch to ground,
the other must present a low impedance. Is there a fallacy in this line
of thinking?

I liked Supermorse myself. Your last question seems to have been cut
off but if it was where's the best frequencies to listen to code try
the novice portions of 40 and 80 meters:

7.100 to 7.150
3.675 to 3.725

There is usually slower code folks down there. By the way, you don't
need to learn code for the Tech class ticket. You'll need it for
General or Extra though but only 5wpm.

If the outlets are truly grounded it'll do but it's better to use a
ground rod from what they tell me.

>Finally, can anyone recommend a good, inexpensive 2M transciever? I

The newer Radio shack handhelds to me are useless unless you plan on
using repeaters only. VERY low power. Check out the lower cost model
Icom's or Kenwood's. The older HTX-202 model is an awesome radio, why
they discontinued it is beyond me. They should fire that "genius"....

I agreed with everything you said. The only problem I have is that
the republicans are just like the democrats when it comes to most
economic issues (wages, immigration, companies moving overseas, ect).

All of these things can be easily fixed. Companies moving overseas
can be forced to pay import fees just like any other importer.

Wages long overdue for a major increase. Based in the increase in
cost of living, the minimum wage should be almost $30 per hour to live
like Americans did just 20 years ago.

And immigration simply must end. Our country simply cannot continue
to absorb an endless influx of new people. Immigration is driving down
wages, driving up housing costs, and seriously straining our overall economy.

But, at this point, it appears that no viable political party intends
to do a darn thing about these problems, so these problems will continue
into the future (no matter who is elected).

From: Tim Moore <Tim@TM52.com>
Message-ID: <398DC142.9CA5B075@TM52.com>
Source record: 105535

I have an Icom T7H handheld that I am wondering how to change the mode from FM to AM. My other Icom does it by holding in the BAND button (IC 207H) but that won't work with the HT. I am wanting to add 122.800, an aviation freq. No problem adding it but I can't switch it to am mode so I can hear anyone. Does anyone know how to do it on the IC-T7H?? I left a msg on Icom's Compuserve forum but that place is deserted.
Please email me also.

I've got a pair of them and they both automatically change to AM when I enter a frequency between 108.000 and 135.995 inclusive. There is no indication of the change, other than if you open the squelch you will note that the noise is much greater on FM than AM. I use mine all the time to monitor the AM aviation band and also to scan a mix of FM and AM and it selects the correct mode just fine.

By the way, my pair of 207Hs do the same, I never have to take any manual action to change modes.

Regards
Dave

Ohio/Penn DX Bulletin No. 473

The Ohio/Penn DX PacketCluster
DX Bulletin No. 473
BID: $OPDX.473
August 7, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH/WB2RAJ & THE 59(9) DX Report, N4VA, W5KAU, K8AV, K8YSE, W9XF, 4X6UO, DJ5AV & DX News Letter, DJ7AA, DL5MO, EA5XX, EI4GK, EI6HB, G3SWH, G3TBK, G0PSE, HA0HW, IK2XDE, IK7JWX, JH6RTO, JI3DST, OK2BMT, RA0FF, RK1PWA, SU1HM, SV2CWY, UA9OJG, VA3QSL, VU2JOS and YO4AUL for the following DX information.

EDITOR'S SPECIAL NOTE (by KB8NW): There will "NOT" be an OPDX bulletin for August 14th and 21st. I know, you heard this before, but it is true this time. My wife (chief proof-reader) and I will be going to Las Vegas (without the young adults) for our 25th wedding anniversary (How did she put up with me all these years?) and to visit my dad. I can really use the break! However, PLEASE continue to send your DX info to me.

3A, MONACO. Jeff, VA3QSL, will be visiting Europe during August and will be operating occasionally from Monaco (3A) between August 8-13th. His callsign will be 3A/VA3QSL/M under his CEPT licence. He will likely be on the 40, 20 and 15 meter bands using 100 watts into a mobile hamstick antenna. QSL direct to homecall or bureau.

4X, ISRAEL. The "DX News Letter" reports that Mirko, DL8ABO, will sign 4X/DL8ABO/p while he is on a business trip to Tel Aviv and Haifa from now until August 19th. He will be active on SSB with 100 watts into a wire antenna. QSL via bureau to DL8ABO or to his CBA.

6 AND 30 METERS NEWS FROM INDIA. Jose Jacob, VU2JOS, reports that from August 1st through December 31st, 2000, Indian Amateurs (VU) have been given permission to use 10.100 to 10.150 MHz and the spot frequencies of 50.350 and 50.55 MHz.

D2, ANGOLA. Hossam, SU1HM, is now active as SU1HM/D2 from Luanda, the capital of Angola. He can be found every evening on 14160 khz (+/- QRM) on SSB. Hossam starts around 2300z. QSL direct via his home callsign address (OK in callbook) at: Hossam El Shenawy, 16 El Daher Square,

Cairo 11271, Egypt.
Also, look for D2EB on 15 meters SSB around 21290 after 1830z.

E4, PALESTINE. Guenter, OE1GZA, was expected to operate this past Saturday as E4/OE1GZA on 20/15 meters and 17/10 meters if propagation was good. However, it looks like it did not happen. There were no QSNs reported. Arie, 4X6UO, informed OPDX that 6 meters is definitely not allowed in Palestine at the moment (The question was asked and very kindly refused). Arie also mentioned that in a little while Guenter will operate RTTY. The equipment is in hand; it is just a question of what software to use.

FR/T, TROMELIN ISLAND. The Lyon DX Group is still active as FR/F6KDF/T until August 16th. Many have been asking, "Is there online logs?" The team has indicated that online logs will be available after the DXpedition is over. For more information, check out their Web site at: http://perso.easynet.fr/~f6jjx/menu.htm

HO1, PANAMA. Operators Wil/DJ7AA, Manfred/DK1BT and Tina/DL6MYL will be active as HO1A from September 16th through October 1st. The principal purpose for their DXpedition is the participation in the CQWW DX RTTY Contest. They plan to be active before and after the contest on all HF bands. However, Panama is actually not a rare country. The team wants to be active on the WARC and low bands as well as CW and RTTY which are still very much in demand. For this reason, they will concentrate mainly on these modes and bands. They will pay special attention particularly on the low bands to Europe and Asia. The time around the equinox is surely ideal for connections with this continent. For more details and information, check their Web site at: http://www.qsl.net/ho1a/

HR, HONDURAS (Update, Please refer to OPDX.472). A group from Spain will be active from here September 17-25th, transmitting on all HF bands, SSB, CW and RTTY operation while installing 9 new digipeaters. The Spanish team will consist of 6 OM and 1 YL and work together with the "Radio Club de Tegucigalpa". This is more than a simple DXpedition. The operators are very experienced DXpeditioners, but also have the knowledge to work with TNCs, antennas, Tranceivers, Eproms , etc. They are going to operate from two HF stations, 24 hours a day, but currently the callsign is not known. The team has asked for HQ1R, and they are waiting for the authority's answer. More details are forthcoming

INTERNATIONAL LIGHTHOUSE/LIGHTSHIP WEEKEND ACTIVITY. Members of the Wicklow Wireless Society will operate EI9KLH from the Lighthouse on the Old Head of Kinsale on the south coast of Ireland during the International Lighthouse/Lightship weekend August 19-20th. QSL via bureau or direct to EI9HQ.

IOTA NEWS.....
AS-041. Look for Takeshi "TAKE", JI3DST, to be active as JI3DST/4 from Oki Archipelago (Nakano-shima Oki-gun Shimane) now through 0200z August 15th. Activity will be on 40/17/15/ 12/10/6 meters SSB. QSL via the JARL Bureau or diect to:
Takeshi Funaki, 2-18-26 Hannan-cho Abeno-ku Osaka-city,

OSAKA 545-0021 JAPAN

AS-089. Andy, UA1PBP/9 will operate from Marresal'sky Koshi Island
for 5-7 days beginning around August 5-7th. He will be
using 100 watts into a dipole antennas on 40-10 meters
including the WARC bands. QSL via RK1PWA.

EU-011. Three members of the Western DX Cluster Group, G3WNI/Bill,
G0PSE/Tom and G0WMW/Doug will be activating St. Mary's (Isles
of Scilly) using the special event callsign GB0SM. They will
be active from September 30th through October 7th, on 160-10
meters and possibly 6 meters. The modes will be CW, SSB and
probably RTTY. QSL via the Bureau, direct to G3WNI or via
E-mail to: g0pse@qsl.net

EU-052. Laci, HA0HW, will spend his holiday with his family on Korfu
(Kerkira) again and will be active as SV8/HA0HW/p now through
August 19th. Activity will be on all bands (including the
WARCs) CW/SSB and maybe RTTY. The low band activity will
depend on the local area to hang up some long wires. On the
other bands Laci will use mono verticals on fishing rods
like he did in the last few years. He states this is a
vacation, but he will try to be on the bands during the local
early mornings and later evenings while family members are
in bed.

EU-183. Corneliu, YO4AUL, informs OPDX that the complete story about
Sacalinu Mare Island (EU-183) can be found on the Web page:
http://www.qsl.net/yo4aul/

IOTA OOOPPPSS DEPARTMENT. In last week's bulletin, two items apparently
were mixed together. Not sure how it happened (it may have happened
during the power outage), but the following should have read as follows:
EU-052. Look for Gerard, F2VX, to sign SV8/F2VX from Keflonia
Island now through August 13th.

EU-057. After the IOTA contest, look for the DL0KWH team to
be active on HF CW/SSB with their individual callsigns
(DH7NO, DL2RTK, DL2SWW, DL2VFR). Pictures from last
year and logs after the contest will be available at:
http://www.qsl.net/dl0kwh

J3, GRENADA. Dave, G3TBK, is now active as J3/G3TBK and he told your
editor Sunday morning that he is currently working there for about the next
6 to 8 weeks. He will be active on all bands but will concentrate on
the WARC bands. Dave was spotted this past weekend on 20 meters CW/SSB
(14020 and 14195 kHz after 0130z), 17 meters SSB (18145 kHz after 1230z)
and 12 meters on 24900 kHz around 1615z. He states that he will be active
75% on CW. QSL via CBA.

JW, SVALBARD. Jarda, OK2PBM, will be active as JW/OK2PBM from Longyearbyen
(IOTA EU-026) from August 9-16th. Activity will be on CW, SSB, RTTY and
(possibly) PSK31 on 160-10 meters. He is planning to operate on CW 35 kHz

+/- QRM up from band edge, on SSB 10 kHz below DX windows, RTTY and PSK31 on the usual frequencies. QSL via OK2PBM, Jaroslav Rohleder, Karla Capka 2348, 697 01 Kyjov, Czech Republic.

MJ, JERSEY. Barry, N0KV (M0CQS), currently living in the UK, informs OPDX that he just received confirmation from the Jersey Amateur Radio Society for the use of their club station for the CQWW SSB Contest (October 28-29th) and associated operation beginning October 22nd. He will use the callsign MJ/N0KV from LaMoye, Jersey, Channel Islands, UK, from Zone 14 and operate as a Single Op or Multi/Single. Operators will be N0KV and possibly others. Station 1 consists of: IC-756, Alpha amp (400W), A3 tri-bander, R7000(WARC) and bandpass filter. Station 2 consists of: FT-100, club tri-bander, 40/80M dipoles and bandpass filter. Operation outside the contest will be on both CW and SSB starting Sunday, October 22nd, and ending after the contest. Activity will be largely day/evening hours (local) before the contest. Jersey is IOTA EU-013. Barry plans to be back in the US after the contest. QSL via N0KV: Barry Mitchell, 12200 Boothill Dr., Parker, CO 80138 USA

OOPPPSSS DEPARTMENT. Information last week under "HU4, EL SALVADOR" was received/translated wrong by sender. This operation took place last year, so please disregard.

QSL INFO AND NEWS.....
Phil, G3SWH, is pleased to announce that he has now answered all the direct QSL requests for the Wasini Island, 5Z4WI, operation as received to date. If you sent a direct card but enclosed anything other than 1 USD or a valid IRC, then your reply will have been sent via the RSGB Bureau. Phil states, "Please note that 1000 lire and other small denomination banknotes of other currencies are valueless in UK."

Steve, W9XF, received an E-mail from Abubaker, 5A1A, and in the message he mentions that Libya does not recognize IRCs and asked that any QSL requests should include green stamps and be sent via registered mail. So far, it appears he's been footing the postage bill for QSLs he receives unless they contain green stamps.

The QSL Manager for EJ7M from EU-121 during the IOTA Contest should be sent to: Denis O' Flynn EI6HB Ladysbridge P.O., Castlemartyr, Co. Cork. Ireland. QSLs can also be sent via the IRTS Bureau.

A group of Sakhalin Island Radio Amateurs activated the new IOTA AS-149 from Moneron Island (RR-16-01 for Russian Robinson Award) for 8 days beginning at the end of July and at the beginning of August as RK0FWL/p. Operators were RA0FF, RA0FU, RA0FW, RA0FN and RA0FY. They made about 8000 QSOs, including 800 QSOs in the IOTA contest. QSL via RK0FWL (not RA0ZD) to his callbook address: P.O.BOX 79, Yu-Sakhalinsk, 693010, RUSSIA (or via the bureau).

IK7JWX/7, active from Grande Island (EU-091) during the IOTA Contest, is to be QSLed via the bureau, or direct to: P.O. Box 218, 73100 Lecce, Italy.

Chris, SV2CWY, informs OPDX that SY2T counts for DXCC as Greece and to QSL via SV2CWY at: PO Box 40130, Salonica 56000, Greece (or via the Bureau).

The complete logs of "Arctic 2000 Dxpedition" from Svalbard Island (EU-026) from July 6-13th, 2000, are now available at: http://www.xdenews.net/logs/svalbard

Larry, N4VA, reports that he has a bunch of IRCs available (for USA addresses only). He states, "They are piling up from my QSL chores for S21AM and S21R. 75 cents each, any quantity. All have a postal mark of some sort in the left corner and all are the airmail variety." If interested, they should E-mail him at " N4VA@yahoo.com " to request/reserve a quantity.

VP9, BERMUDA. Seiji, JH6RTO, will be active as M0RAA/VP9 from September 21-26th. His activity will be on 40-6 meters. QSL via JH6VLF through the JARL Bureau or CBA. Seiji also states that he will stop his QSLing until next February when he returns from England to Japan. This includes his AH0R (/AH2/VP9), KC6FS/T88FS, S79SF, etc... operations. Please note that Masanori, JH6VLF does not have the logs and QSLs for these operations.

WEB PAGE OF INTEREST. One thing amateur radio operators are very fearful about is lightning strikes. Check out the Web page at: http://lightningstorm.com/lightningstorm/gpg/lex1/mapdisplay_free.jsp

ZD7, ST. HELENA. Barrie, ZD7MY, was active this past weekend on 15 meters SSB (21310 kHz) between 1900 and 2130z. He uses a three element beam with 90 watts. QSL via CBA.

ZONE 23. Look for Alex/RA0WA and RA0WAC to operate respectively as RK0YWA/P from Tuva (Zone 23, WAZ). This expedition will take place in the Sayanskij Mountain. No dates were provided (we will try to find out), but they will operate on all bands including the WARCs. QSL via RA0WA

I have already been on the Limbaugh group as well as the Dems and Reps groups. Some posts are great while others reflect "Duh." This used to be a great group until a sissy nitwit or two, with tears in their eyes went running to momma server moaning, "Doc is tewibble. He's not posting ham wadio stuff. Boo hoo."
MindSpring reacted to the crybabies-afterall, it had to react to somebody. And you especially have one hell of a nerve criticizing me, a person who puts a call and name after every post, while a sissykins like you has to hide behind anonymity. You're as yellow as they come.
AF2Y said that, Doc!

In article <200008061903.PAA13500@anon.cotse.com>, "doc" <anonymous@cotse.com> wrote:

Thanks to everyone who responded to my post. I've learned quite a
bit, and I think I'm going to find this interesting. I have another
question or two, though....

Can someone recommend a good online site/file for General Class
theory? I'm thinking about taking the General exam along with my Tech
exam, and taking the Morse test next month after I've had some time to
practice. I want to know the theory behind the questions,
though...yeah, I could probably memorize enough multiple choice
questions to pass, but I want to know the theory behind the questions
as well.

Thanks for the help!

Zach Babayco, <insert call sign here> :)

The fact is ,that human nature is human nature . No other fact is relevant in "bringing a halt " to this.... You will NOT "bring a halt" to it, in fact. some will always respond to the Looney, others willl only repond occasionally for laughs, While still others refuse to respond at all...This has been, and will always be the case here, even though 5 years has slipped by. To continue his attacks on Cheek, even after the man is dead and gone, demonstrates in spades the fact that he is, as we say up here, "About three sacks short of a load".

He will continue, it is his only aim and obsession. he lacks the intelligence to do anything more with his life. He can no more stop than a dog can stop scratching his fleas. An idiot cannot be more than he is. Cretins do not finally "Get the message". That is why they are cretins. You must understand him this much to see the hilarity as he continues to flop along in his ineffective, ever-repeating pattern, time after time, while a dead man lies in his grave, and no longer hears, nor cares. Try looking at the poor dirt-eating slob in this light, and you , too, can learn to be amused with his antics.....

Dear Irv,

I see what you are getting at. However, in reality, the impedance presented by a wire with its far end earthed can be almost any impedance that you can imagine - but in any case it will generally be almost pure reactance. The real part of the series equivalent impedance will be very small for a perfect or near perfect earth and a moderate gauge of wire. Whatever impedance each of the two wires has, independantly, the two of them together will have an iimpedance that depends on many factors, such as the distance between them, the size of the conductors, etc.

When it is all said and done, the two wires will generally have an impedance many times higher than the series resonant circuit or artificial ground. In fact, the series resonant circuit is essentially optimal in that it can approach an impedance equal to that measured at the earth rod.

There has been a myth floating around for years about using a piece of coax with a capacitor at each end bridging the outer shield to the center conductor. The legend is that such a ground wire will be of lower impedance than any other type of ground wire. Don't believe it!

The artificial ground is probably the most practical way to achieve a cool chassis when feeding an end fed long wire when the rig is distant from the earth rod. This does not mean that there will not be any RF current flowing through the chassis - on the contrary. But the chassis will not have an RF potential with respect to earth (ideally).

I just heard a slick slogan by a W5 in New Mexico in QSO with a W3 in Delaware on 14.237. Truer words were never spoken. It was "Vote against peace and prosperity. Elect George Bush."
That's pretty cute isn't it?

Based on what I'm hearing hams discuss NOW about the upcoming campaign, we have a garden party because the DNC has yet to be held. The low key Mr. Gore will break loose and you will see a fire and brimstone candidate who's gonna shock the dickens out of a lot of us hams and general populace. Wait and see.

According to the latest USA poll, Bush NOW has 206 electoral votes in the bag. He needs 270 to win. Looks real bad for Al who has yet to be nominated; in other words Bush is running against no competitor.

I have a question. And no kidding. Riley Hollingsworth demands peace and quiet on let's say 14.313. Now suppose I or any other Gore supporter get on to discuss OUR man and in comes Dan, W4NTI, or Tim, KK7HO or for that matter any other well-versed Bush supporter and we ARGUE the merits of our preferences. When one discusses politics, which should be allowed on ham radio, voices can become raised. Will this, according to Riley, be disturbing the peace? Will letters be sent to the debating politicos?

You see, friends and foes, what's happening to ham radio? What used to come naturally to us now becomes threatening. Where does all this stinking quasi-censorship end? When the hell is Mr. H. going to respect the basic freedoms of radio communications outlined in the 1934 Communications Act?

So suppose there is a Rep. v. Dem shouting match and it might disturb Heinz from Germany or Vladimir from Russia or Francoise from Paris or..or..or..Julio from Madrid? And letters of complaint are registered. Why should they make a difference to Riley or to any other FCC official? They shouldn't but they just might. Our frequencies might be taken away. My take on it.

SCREW THE COMPLAINERS! We are Americans guy and gals and we rule! That's right and not by might but by bucks. There is nothing more powerful in this entire world than Yankee greenbacks and the rest of the world hinges on our ability to deliver. Who are these "Hunyaks" to try to rob us of freedom of speech and who is Riley Hollingsworth to listen to those complaining freeloaders?

Hold on now, I'm not advocating mayhem or foul language but what I demand as an American is my right to TALK POLITICS on ham radio without worrying about my ticket being lifted. Furthermore I demand YOUR RIGHT to either DISAGREE or AGREE on ham radio and of course the Internet too. We don't need to be

listened to and guided by BIG BROTHER.

And lastly, if you guy and gals don't stand up for the basic principles I just outlined, it'll make no difference whether Bush or Gore win on Nov.7th. Presidents are worthless if they "lead" a nation's citizenry having its rights inexorably shredded.

Doc & All:
I come here for radio talk. This doesn't mean that I'm opposed to political discussion, just that it has it's place. That place is a different news group.

We insist that people put FA at the biginning of a post for an auction announcement. Those of us that aren't interested can pass them by. I suggest we preface our political remarks with: (P). That way those of us that want to skip them, can.

SB DX @ WW < KB8NW $OPDX.473
Ohio/Penn DX Bulletin No. 473

The Ohio/Penn DX PacketCluster
DX Bulletin No. 473
BID: $OPDX.473
August 7, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH/WB2RAJ & THE 59(9) DX Report, N4VA, W5KAU, K8AV, K8YSE, W9XF, 4X6UO, DJ5AV & DX News Letter, DJ7AA, DL5MO, EA5XX, EI4GK, EI6HB, G3SWH, G3TBK, G0PSE, HA0HW, IK2XDE, IK7JWX, JH6RTO, JI3DST, OK2BMT, RA0FF, RK1PWA, SU1HM, SV2CWY, UA9OJG, VA3QSL, VU2JOS and YO4AUL for the following DX information.

EDITOR'S SPECIAL NOTE (by KB8NW): There will "NOT" be an OPDX bulletin for August 14th and 21st. I know, you heard this before, but it is true this time. My wife (chief proof-reader) and I will be going to Las Vegas (without the young adults) for our 25th wedding anniversary (How did she put up with me all these years?) and to visit my dad. I can really use the break! However, PLEASE continue to send your DX info to me.

3A, MONACO. Jeff, VA3QSL, will be visiting Europe during August and will be operating occasionally from Monaco (3A) between August 8-13th. His callsign will be 3A/VA3QSL/M under his CEPT licence. He will likely be on the 40, 20 and 15 meter bands using 100 watts into a mobile hamstick antenna. QSL direct to homecall or bureau.

4X, ISRAEL. The "DX News Letter" reports that Mirko, DL8ABO, will sign 4X/DL8ABO/p while he is on a business trip to Tel Aviv and Haifa from now until August 19th. He will be active on SSB with 100 watts into a wire antenna. QSL via bureau to DL8ABO or to his CBA.

6 AND 30 METERS NEWS FROM INDIA. Jose Jacob, VU2JOS, reports that from August 1st through December 31st, 2000, Indian Amateurs (VU) have been given permission to use 10.100 to 10.150 MHz and the spot frequencies of 50.350 and 50.55 MHz.

D2, ANGOLA. Hossam, SU1HM, is now active as SU1HM/D2 from Luanda, the capital of Angola. He can be found every evening on 14160 khz (+/- QRM) on SSB. Hossam starts around 2300z. QSL direct via his home callsign address (OK in callbook) at: Hossam El Shenawy, 16 El Daher Square, Cairo 11271, Egypt.

Also, look for D2EB on 15 meters SSB around 21290 after 1830z.

E4, PALESTINE. Guenter, OE1GZA, was expected to operate this past Saturday as E4/OE1GZA on 20/15 meters and 17/10 meters if propagation was good. However, it looks like it did not happen. There were no QSNs reported. Arie, 4X6UO, informed OPDX that 6 meters is definitely not allowed in Palestine at the moment (The question was asked and very kindly refused). Arie also mentioned that in a little while Guenter will operate RTTY. The equipment is in hand; it is just a question of what software to use.

FR/T, TROMELIN ISLAND. The Lyon DX Group is still active as FR/F6KDF/T until August 16th. Many have been asking, "Is there online logs?" The team has indicated that online logs will be available after the DXpedition is over. For more information, check out their Web site at: http://perso.easynet.fr/~f6jjx/menu.htm

HO1, PANAMA. Operators Wil/DJ7AA, Manfred/DK1BT and Tina/DL6MYL will be active as HO1A from September 16th through October 1st. The principal purpose for their DXpedition is the participation in the CQWW DX RTTY Contest. They plan to be active before and after the contest on all HF bands. However, Panama is actually not a rare country. The team wants to be active on the WARC and low bands as well as CW and RTTY which are still very much in demand. For this reason, they will concentrate mainly on these modes and bands. They will pay special attention particularly on the low bands to Europe and Asia. The time around the equinox is surely ideal for connections with this continent. For more details and information, check their Web site at: http://www.qsl.net/ho1a/

HR, HONDURAS (Update, Please refer to OPDX.472). A group from Spain will be active from here September 17-25th, transmitting on all HF bands, SSB, CW and RTTY operation while installing 9 new digipeaters. The Spanish team will consist of 6 OM and 1 YL and work together with the "Radio Club de Tegucigalpa". This is more than a simple DXpedition. The operators are very experienced DXpeditioners, but also have the knowledge to work with TNCs, antennas, Tranceivers, Eproms , etc. They are going to operate from two HF stations, 24 hours a day, but currently the callsign is not known. The team has asked for HQ1R, and they are waiting for the authority's answer. More details are forthcoming

INTERNATIONAL LIGHTHOUSE/LIGHTSHIP WEEKEND ACTIVITY. Members of the Wicklow Wireless Society will operate EI9KLH from the Lighthouse on the Old Head of Kinsale on the south coast of Ireland during the International Lighthouse/Lightship weekend August 19-20th. QSL via bureau or direct to EI9HQ.

IOTA NEWS.....
AS-041. Look for Takeshi "TAKE", JI3DST, to be active as JI3DST/4 from Oki Archipelago (Nakano-shima Oki-gun Shimane) now through 0200z August 15th. Activity will be on 40/17/15/ 12/10/6 meters SSB. QSL via the JARL Bureau or diect to:
Takeshi Funaki, 2-18-26 Hannan-cho Abeno-ku Osaka-city,
OSAKA 545-0021 JAPAN

AS-089. Andy, UA1PBP/9 will operate from Marresal'sky Koshi Island
for 5-7 days beginning around August 5-7th. He will be
using 100 watts into a dipole antennas on 40-10 meters
including the WARC bands. QSL via RK1PWA.

EU-011. Three members of the Western DX Cluster Group, G3WNI/Bill,
G0PSE/Tom and G0WMW/Doug will be activating St. Mary's (Isles
of Scilly) using the special event callsign GB0SM. They will
be active from September 30th through October 7th, on 160-10
meters and possibly 6 meters. The modes will be CW, SSB and
probably RTTY. QSL via the Bureau, direct to G3WNI or via
E-mail to: g0pse@qsl.net

EU-052. Laci, HA0HW, will spend his holiday with his family on Korfu
(Kerkira) again and will be active as SV8/HA0HW/p now through
August 19th. Activity will be on all bands (including the
WARCs) CW/SSB and maybe RTTY. The low band activity will
depend on the local area to hang up some long wires. On the
other bands Laci will use mono verticals on fishing rods
like he did in the last few years. He states this is a
vacation, but he will try to be on the bands during the local
early mornings and later evenings while family members are
in bed.

EU-183. Corneliu, YO4AUL, informs OPDX that the complete story about
Sacalinu Mare Island (EU-183) can be found on the Web page:
http://www.qsl.net/yo4aul/

IOTA OOOPPPSS DEPARTMENT. In last week's bulletin, two items apparently
were mixed together. Not sure how it happened (it may have happened
during the power outage), but the following should have read as follows:
EU-052. Look for Gerard, F2VX, to sign SV8/F2VX from Keflonia
Island now through August 13th.

EU-057. After the IOTA contest, look for the DL0KWH team to
be active on HF CW/SSB with their individual callsigns
(DH7NO, DL2RTK, DL2SWW, DL2VFR). Pictures from last
year and logs after the contest will be available at:
http://www.qsl.net/dl0kwh

J3, GRENADA. Dave, G3TBK, is now active as J3/G3TBK and he told your
editor Sunday morning that he is currently working there for about the next
6 to 8 weeks. He will be active on all bands but will concentrate on
the WARC bands. Dave was spotted this past weekend on 20 meters CW/SSB
(14020 and 14195 kHz after 0130z), 17 meters SSB (18145 kHz after 1230z)
and 12 meters on 24900 kHz around 1615z. He states that he will be active
75% on CW. QSL via CBA.

JW, SVALBARD. Jarda, OK2PBM, will be active as JW/OK2PBM from Longyearbyen
(IOTA EU-026) from August 9-16th. Activity will be on CW, SSB, RTTY and
(possibly) PSK31 on 160-10 meters. He is planning to operate on CW 35 kHz
+/- QRM up from band edge, on SSB 10 kHz below DX windows, RTTY and PSK31
on the usual frequencies. QSL via OK2PBM, Jaroslav Rohleder,

Karla Capka 2348, 697 01 Kyjov, Czech Republic.

MJ, JERSEY. Barry, N0KV (M0CQS), currently living in the UK, informs OPDX that he just received confirmation from the Jersey Amateur Radio Society for the use of their club station for the CQWW SSB Contest (October 28-29th) and associated operation beginning October 22nd. He will use the callsign MJ/N0KV from LaMoye, Jersey, Channel Islands, UK, from Zone 14 and operate as a Single Op or Multi/Single. Operators will be N0KV and possibly others. Station 1 consists of: IC-756, Alpha amp (400W), A3 tri-bander, R7000(WARC) and bandpass filter. Station 2 consists of: FT-100, club tri-bander, 40/80M dipoles and bandpass filter. Operation outside the contest will be on both CW and SSB starting Sunday, October 22nd, and ending after the contest. Activity will be largely day/evening hours (local) before the contest. Jersey is IOTA EU-013. Barry plans to be back in the US after the contest. QSL via N0KV: Barry Mitchell, 12200 Boothill Dr., Parker, CO 80138 USA

OOPPPSSS DEPARTMENT. Information last week under "HU4, EL SALVADOR" was received/translated wrong by sender. This operation took place last year, so please disregard.

QSL INFO AND NEWS.....
Phil, G3SWH, is pleased to announce that he has now answered all the direct QSL requests for the Wasini Island, 5Z4WI, operation as received to date. If you sent a direct card but enclosed anything other than 1 USD or a valid IRC, then your reply will have been sent via the RSGB Bureau. Phil states, "Please note that 1000 lire and other small denomination banknotes of other currencies are valueless in UK."

Steve, W9XF, received an E-mail from Abubaker, 5A1A, and in the message he mentions that Libya does not recognize IRCs and asked that any QSL requests should include green stamps and be sent via registered mail. So far, it appears he's been footing the postage bill for QSLs he receives unless they contain green stamps.

The QSL Manager for EJ7M from EU-121 during the IOTA Contest should be sent to: Denis O' Flynn EI6HB Ladysbridge P.O., Castlemartyr, Co. Cork. Ireland. QSLs can also be sent via the IRTS Bureau.

A group of Sakhalin Island Radio Amateurs activated the new IOTA AS-149 from Moneron Island (RR-16-01 for Russian Robinson Award) for 8 days beginning at the end of July and at the beginning of August as RK0FWL/p. Operators were RA0FF, RA0FU, RA0FW, RA0FN and RA0FY. They made about 8000 QSOs, including 800 QSOs in the IOTA contest. QSL via RK0FWL (not RA0ZD) to his callbook address: P.O.BOX 79, Yu-Sakhalinsk, 693010, RUSSIA (or via the bureau).

IK7JWX/7, active from Grande Island (EU-091) during the IOTA Contest, is to be QSLed via the bureau, or direct to: P.O. Box 218, 73100 Lecce, Italy.

Chris, SV2CWY, informs OPDX that SY2T counts for DXCC as Greece and to QSL via SV2CWY at: PO Box 40130, Salonica 56000, Greece (or via the

Bureau).

The complete logs of "Arctic 2000 Dxpedition" from Svalbard Island
(EU-026) from July 6-13th, 2000, are now available at:
http://www.xdenews.net/logs/svalbard

Larry, N4VA, reports that he has a bunch of IRCs available (for USA
addresses only). He states, "They are piling up from my QSL chores
for S21AM and S21R. 75 cents each, any quantity. All have a postal
mark of some sort in the left corner and all are the airmail variety."
If interested, they should E-mail him at " N4VA@yahoo.com "
to request/reserve a quantity.

VP9, BERMUDA. Seiji, JH6RTO, will be active as M0RAA/VP9 from September
21-26th. His activity will be on 40-6 meters. QSL via JH6VLF through the
JARL Bureau or CBA. Seiji also states that he will stop his QSLing until
next February when he returns from England to Japan. This includes his
AH0R (/AH2/VP9), KC6FS/T88FS, S79SF, etc... operations. Please note
that Masanori, JH6VLF does not have the logs and QSLs for these operations.

WEB PAGE OF INTEREST. One thing amateur radio operators are very fearful
about is lightning strikes. Check out the Web page at:
http://lightningstorm.com/lightningstorm/gpg/lex1/mapdisplay_free.jsp

ZD7, ST. HELENA. Barrie, ZD7MY, was active this past weekend on 15 meters
SSB (21310 kHz) between 1900 and 2130z. He uses a three element beam
with 90 watts. QSL via CBA.

ZONE 23. Look for Alex/RA0WA and RA0WAC to operate respectively as
RK0YWA/P from Tuva (Zone 23, WAZ). This expedition will take place in
the Sayanskij Mountain. No dates were provided (we will try to find out),
but they will operate on all bands including the WARCs. QSL via RA0WA

- OR -
Use the VOICE or FAX answering machine at 440-237-8208 which shares the
same phone line as BARF-80 BBS using a data/fax/phone switch. To access:
1) Dial Number. 2) Wait for first ring (the second ring should be a false
ring from the fax/data switch box) and then dial four quick ones ("1111").
(NOTE: Some FAX machines that send single "BEEPS" every second will not
have to do this step.) 3) The phone will pick up and after the "BEEP"
leave your voice message or FAX.

/EXIT

Dan,
Buchanan will take votes away from Bush and Nader will do the same to Gore.
And since Bush and Gore are TRUE candidates, it's a shame.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew

this is the java bean generic radio interface i came up with a couple years ago for what was going to be a java based contest logging program. the principle behind the interface in the java bean world is to define a minimum set of functions that a bean has to fill to fit into the framework. with this as the 'api' you could then impliment beans for specific radios, then each radio bean would be able to make use of a communication bean that had an interface that would let it talk to radios that could be on serial ports, networks, or any other type of port you wanted to write a communication bean for. the nice thing about 'java beans' is that they are modular. as long as you follow certain design processes they can be installed and customized at runtime, so by only publishing a set of interface requirements you could have many writers supplying small pieces that should all fit together and be interchangeable. the whole project kind of bogged down with the slow start of java, lack of tools in the beginning and other priorities. some of the high level design is still available on my web site at:
http://www.berkshire.net/~robbins/logger
there is an old prototype on there, i have continued to update it a bit but haven't had much time recently to really do anything with it. it doesn't actually talk to any radio since the stock java tools didn't include a serial port interface, there are/were some available as 3rd party libraries but were a bit pricey at the time i was working on this.

some advantages of java for something like this is that it is (relatively) platform independent, it has remote process capabilities for use over networks, and the 'beans' concept makes building modular systems nice.

```
public interface RadioInterface
{
public int getVFOCount(); //radio returns how many vfo's it has

public void setTXVFO(int vfo); //select a vfo to tx on
public int getTXVFO(); //radio return what vfo is currently selected for tx

public void setRXVFO(int vfo); //select a vfo to rx on
public int getRXVFO(); //radio return what vfo is selected for rx

public boolean isSplit(); //is split mode selected
public void setSplit(boolean split); //turn split mode on/off

public Frequency getFrequency(int vfo); //get freq from vfo
public Frequency getTXFrequency(); //get current tx freq being used
public Frequency getRXFrequency(); //get current rx freq being used

public void setFrequency(int vfo,Frequency newFrequency); //set freq in a vfo
public void frequencyUp(int vfo, int step); //step freq up in vfo by step
```

```
public void frequencyDown(int vfo, int step); //step freq down in vfo by step

public void setMode(int vfo, Mode newMode); //set vfo mode
public Mode getMode(int vfo); //get current vfo mode
public Mode getTXMode(); //get tx mode
public Mode getRXMode(); //get rx mode
public void modeUp(int vfo); //switch mode up (does this make sense??)
public void modeDown(int vfo); //switch mode down (does this make sense??)

public void setBand(int vfo,Band newBand); //set vfo band
public Band getBand(int vfo); //get current vfo band
public Band getTXBand(); //get tx band
public Band getRXBand(); //get rx band
public void bandUp(int vfo); //move vfo up one band
public void bandDown(int vfo); //move vfo down one band

}

But, wouldn't the fact that the driver and API layers are running on a
several hundred Mhz machine make their delay negligable compared to the
slower transfer rate of the Internet?

I have, as time has allowed, been working on an netwoek type interface
using Linux. I have a couple of programs on my web site for controlling
Kenwood TS140/440/940's. I have a 140. One in written in C using Xforms
and the other is in Tcl/Tk and runs on Linux, Win95, etc. any machine
with a Tcl/Tk 8.0 port.
My first attempt is just a simple network/serial port pipeline. Next
step is to have a more portable type API server and driver. As time
allows that is.

I don't think they, drivers, will do that. Almost all of the delays are in
the routing of the datagrams through the different routers on a network.

> Too much layering, or an incomplete API can interfere with smooth remote
> radio control even if the other problems (delays) in the system are
> solved. Some method of issuing low-level commands might be a part of
> the specification.

That's how software gets broken! The whole point with GOOD software
engineering practice is to keep each module, and layer, isolated from one

another. The communication should ONLY be through the exported API. Each module should not depend on any data structures, internal routines, etc. that are not meant to be used publicly in any other module. This is what is called data hiding, another software engineering principle.

If a programmer does an end run around the system by issuing "low level commands" not supported by the API, then if the hardware, or the internal software, should change then the application fails! Time and time again I hear about programmers who do this. Then later when something changes internally that their software depended they get bit in the behind. They know better. When a good programer does this its because its the "easy and quick way" to fix something, instead of spending a little more time to design a better solution.

By sticking to a standard published API the manufactures, and programmers, are then free to make any necessary changes to code modules, so long as the specifications for the exported API remain the same. That is the whole point of having a standard API, and sticking with it. Every computer science course, book, etc. should hammer people over the head until they finally realize its good solid software engineering practice!

If there is a need to issue a low level command not supported by the standard API, that should be a big clue the API requirements were not completely analyzed, and specified, in the design stage.

> disadvanages:
>
> 1. Must live on the same system.

Nope. There are applications that run on a user's PC which issues
Remote-Procedure-Calls to a server somewhere else on a network, or even a
different network for example.

The company I work for has the user interface software, for payroll;
inventory; etc, running on a user's PC. The interface software then uses
RPC's to call the database application running on the server. The user's PC
does not care where that server is located either.

> 2. Must be loosely or tightly linked with the application

Well that is the point of having a standard API. The application talks to
the API to do whatever it needs with the hardware.

> 3. Language restrictions.

Nope. As long as the INTERFACE, meaning the size; type; and sequence, of the
arguments, and returned data are published, you can use almost any language
to access the API.

Gee, Doc. The glow of Ham Solidarity is now warmly pulsing through my veins thanks to your ever so insightful post. I feel warm and fuzzy all over just knowing that you and I share a common bond.
Save your mud pies. You will be eating them after the current Socialist regime loses the White House to people of real substance and integrity.
By the way, Doc....count me out ref. despising the Hams on this group. I like to hear from almost all of them. You are not included, however, as your posts usually run on and on and on.....ad nauseum.

> I'm sure your servers offer them all. The reason I'm appealing to you is
> because YOU HAVE MUCH TO SAY; WE ARE ALL HAMS and WE ARE FAMILY even
though
> we despise one another.
> I stocked up on mud pies all ready to throw at the Bushites and take note

Hello Doc.

You don't make a lot of sense, but then again most Democrats don't. This was posted a few posting back. Please brush up on your tchnical advice to all us CB'ers. You have a lot of room for improvement when giving us CB'ers technical advice on rec.radio.cb

Jay in the Great Mojave Deseret, ...just down the road ah ways from the fillin station.

I, as a good democrat, believe

a. that Margaret Sanger & Gloria Steinmen are more important to Am. history than Thomas Jefferson, Robert E. Lee or Thomas Edison.

b. that standardized tests are racist, but racial quotas and set-asides aren't.

c. that homosexual parades displaying drag queens, transvestites and bestiality should be constitutionally protested while manger scenes at Christmas and the 10 Commandments in your classroom should be illegal.

d. that AIDS virus is spread by lack of federal funding and not lifestyle.

e. that global temperatures are less effected by cyclical, documented changed in the earth's climate and more effected by yubbies driving SUVs.

f. that the NRA is bad because it supports certain parts of the Constitution, while the ACLU is good because it supports certain parts of the Constitution.

g. that taxed are too low, but ATM fees are too high.

h. that the military, not corrupt politicians, start wars.

i. that self-esteem is a gift to students from teachers and not something that is individually earned.

j. that hunters don't care about nature, but activist "greens" do.

k. that businesses create oppression and government creates prosperity & jobs.

l. that capital punishment is evil while abortion on demand at any point in pregnancy is good.

m. that gender roles are artificial but being homosexual is natural.

n. that guns in the hands of law-abiding citizens are more of a threat to your safety than nuclear weapon technology in the hands of Chinese communists.

o. that government knows how to raise your children better than you do.

p. that Al Gore invented the internet.

Virtually anyone can be a democrat. Just quit thinking; and then, vote that way.

I'm causing interference on my neighbour television on
cable channel 24. I found that the video frequency on cable
24 is 223.25 MHz and audio frequency is 227.75 MHz

I transmit on the national calling freq. 223.50MHz using
25 watts.

The cable company VIDEOTRON can't find the leak.
They said their distribution line is very old.

I was wondering if some of you had similar problem like
mine using this band.

Thank's and 73

Of course he can't be expected to know what went on before he came on the scene. This is probably the reason he stated on the air that what went on before didn't concern him and he would only act on what was happening from now on. This is not a direct quote, but it's what he said.

I just deleted two paragraphs of factual information, that I could prove if needed from this reply. Why did I do so? I chose not to have the wrath of the Federal government on me. So there you have it, censorship by default.

Suffice it to say...one day someone will take the FCC to task for its underhanded handling of this alleged "inforcement effort". The last time I looked we still had rights. Or am I like Doc, out of touch? Did we lose our first ammendment rights when we signed for our license? I don't think so.

For such a politically astute feller you can be really slow sometimes

Doc.

The purpose of a third party now adays is to "spoil" the election.
Example: Remember the Ross Perot charade first time around? He got in
to take votes AWAY from Bush and let Clinton win...which is exactly
what happened.

Then on the second time around....he slipped in and tried it again.
But didn't hang around long. Why? Cuz even Dole didn't want the job.

I don't think the American voters (the ones that will show up) will
fall for this again. Like they say down here....that dog just wont run.

The big question here is Canada like the US? Down here if we bug a
frequency that we are primary user on, i.e. cable TV the cable boys
have to fix the problem. And if they bug us, ditto. How about Canada?

There is nothing you can do to avoid interference being that close,
other than reducing power or improving seperation, or both.

I have for sale a Standard

1. ONE (1) Standard C-228A 144/220 MHZ handheld transceiver is in
Excellent Condition
2. ONE (1) Standard CLC-521 Leather Cases
3. ONE (1) Standard CNB-153 7.2 volt 1000mah batteries
4. ONE (1) Standard CNB-151 7.2 volt 700 mah battery
5. ONE (1) Standard CAW-150 cigarette lighter adaptor
6. ONE (1) Standard CSA-160 Quick Charger
7. ONE (1) Yaesu MH-12 speaker/microphones. Which work great on the
Standard handhleds.

AGAIN THE EQUIPMENT IS IN EXCELLENT CONDITION, AND I HAVE ALL THE
PACKING MATERIAL, AND ORIGINAL BOXES.......

.......$259.00 SHIPPED UPS INSURED IN THE UNITED STATES ONLY......

Thank You & 73,

Leo (310) 670-6969

Zip cord can have remarkably high losses at HF. I once measured over three dB of attenuation at 7 MHz in a 30 foot piece of brand new zip cord. I later determined the attenuation was primarily due to the very lossy vinyl dielectric but surprisingly, the series conductor loss was much higher than expected. The conductor strands were heavily tarnished, apparently as a result of the insulation extrusion process. The conductors were much harder than typical soft drawn copper and may have been an alloy inappropriate for RF transmission lines.

Apparantly, the RF attenuation of Zip cord can vary radically from manufacturing batch to batch depending on the particular vinyl formulation utilized.

I would advise against using Zip cord as an RF transmission line unless you are able to verify acceptable attenuation at the intended operating frequency. Otherwise, spend a bit more money and use product intended for RF applications.

It's not that hard to find a bad cable or connector. Use a portable on that frequency and go up and down the streets looking for the signal. If you can't find it that way, get neat the TV set and see if the problem is inside the house. A loose or bad splitter, or even bad coax inside the TV set. The cable company should have a Sniffer system to do their own tests. It's a fixed frequency tone modulated signal (usually above the top channel) and portable and mobile receivers that are used to localize and find the problems. This type of equipment has been in use for about 20 years.

Unavailable Kenwood Accessories 4 SALE.....

1. Kenwood IF-232C interface unit $75.00 @ shipped in US
Comes with data cabel, and copy of instruction manual
Can be used with the TS-140,680,440,940,850,450,690,950

2. Kenwood IC-10 (chip set) $40.00 shipped, used with the TS-440S, &
R-5000

3. Kenwood TU-6 tone unit for the TH-21,31,41 handhelds $40.00 shipped

4. Kenwood TU-4C tone board for the TW-4000A $40.00 shipped

5. Kenwood YK-88C 500 hz CW filter for the TS-120S,130S,130SE,
430S, 440S $69.00 shipped

6. Kenwood YK-88CN 270 HZ CW filter for the TS-130S,130SE, 430S,440S,
530S, 530SP, 830S, 670S, 660, & R-5000 $69.00 shipped

7. Kenwood MA-5 HF antenna 10,15,20,40, 80 meters in great condition
with carrying sack. $90.00 excellent condition

8. Kenwood MS-1 mobile stand for a TR-2500 handheld $25.00 shipped

9. Kenwood SMC-25 speaker mic for a TR-2500 $22.00 shipped

73, & Thank You

The situation is almost identical here; protection of life and property is paramount and the rules go out the window in emergency situations. Several Northern states here have similar laws with respect to freezing conditions and snow -- one has to help. Similarly, no one has ever been charged for not doing it.

The Amateur Service here traditionally has far more than its share of seabag lawyers (that from a Federal Communications Commission district engineer) and you just saw one fly by.

Only that the resulting impedance is a parallel combination of the two
impedances. If one is inductive and the other capacitive at a given
frequency the result is a higher impedance than either conductor alone
would produce.

: Andrew R Mitz wrote:
: But, wouldn't the fact that the driver and API layers are running on a
: several hundred Mhz machine make their delay negligable compared to the
: slower transfer rate of the Internet?

Yes. You are probably right.

:
: I have, as time has allowed, been working on an netwoek type interface
: using Linux. I have a couple of programs on my web site for controlling
: Kenwood TS140/440/940's. I have a 140. One in written in C using Xforms
: and the other is in Tcl/Tk and runs on Linux, Win95, etc. any machine
: with a Tcl/Tk 8.0 port.
: My first attempt is just a simple network/serial port pipeline. Next
: step is to have a more portable type API server and driver. As time
: allows that is.

Regarding the interface, the human interface should be separate from
the API. I, too, have written network centric interface. Mine
is in Java and was described in the February 1998 issue of QST.
The goal here is to build a common API layer between the hardware
and the rest of the system.

Leland C. Scott (no-spam@junk-mail.net) wrote:
: > Too much layering, or an incomplete API can interfere with smooth remote
: > radio control even if the other problems (delays) in the system are
: > solved. Some method of issuing low-level commands might be a part of
: > the specification.
:
: That's how software gets broken! The whole point with GOOD software
: engineering practice is to keep each module, and layer, isolated from one
: another. The communication should ONLY be through the exported API. Each
: module should not depend on any data structures, internal routines, etc.
: that are not meant to be used publicly in any other module. This is what is
: called data hiding, another software engineering principle.
:
: If a programmer does an end run around the system by issuing "low level
: commands" not supported by the API, then if the hardware, or the internal
: software, should change then the application fails! Time and time again I
: hear about programmers who do this. Then later when something changes
: internally that their software depended they get bit in the behind. They
: know better. When a good programer does this its because its the "easy and
: quick way" to fix something, instead of spending a little more time to
: design a better solution.
:
: By sticking to a standard published API the manufactures, and programmers,
: are then free to make any necessary changes to code modules, so long as the
: specifications for the exported API remain the same. That is the whole point
: of having a standard API, and sticking with it. Every computer science
: course, book, etc. should hammer people over the head until they finally
: realize its good solid software engineering practice!
:
: If there is a need to issue a low level command not supported by the
: standard API, that should be a big clue the API requirements were not
: completely analyzed, and specified, in the design stage.

Exactly. Which is why fast, hard real-time systems often throw the
existing APIs out the window. Interactively controlling a receiver
frequency is a difficult real-time issue. There must be options for
low-latency interactions in the API. There must also be minimal overhead
for moving data between layers or an interactive application will
fail. Computer science books don't write working real-time systems.
They just discuss them. After reading the books, some poor sole
has to make it all work.

Now this guy has a handle on reality. Remember back in the heyday of
the VN War? Im sure you all have seen the movies and stories, but
basically all the "enemy" had to do was wait us out. And the people
would force Washington out of the war. Which is exactly what
happened. So guys and gals...that is exactly what the Communists are
doing right NOW. Patiently waiting until we self destruct. If you
don't believe it, open your eyes, turn OFF your US Newscasts, go listen

to SW Radio and pick up some good offshore satellite feeds. Now that will wake you up.

Hold on now. Wasn't AOL known as the server that stifled speech while Jimmy
O'Brien told me MindSpring was just the opposite? WHAT'S GOING ON HERE?
Tim, I don't agree with you but at least you have the right to say it
possibly until some more schmucks on this board go running to AOL,
complaining about off topic posts. Carry on because you're a ham which makes
you multidimensional, not BORING.

There are not a lot of repeaters in this area. You might want to obtain the
ARRL repeater directory for a list of repeaters. I did a web search and found
nothing.

Hold on Gene. You're confusing ham posts with ham TECHNICAL posts. You seek the latter not the former.

Check my post and it began by mentioning what I heard on the HAM BAND. It was political because the hams themselves were spouting off about politics. It ended on the theme of ham radio being too tightly monitored and controlled. That's unsatisfactory to you? You seem to be against any deviation whatsoever from ham TECHNICAL talk and that's absurd since that kind of talk is NOT prevalent on the bands-at least not what I hear.

Gene, don't you understand the meaning of "misc" in the URL of this group? It means "consisting of diverse subjects." Perhaps if one doesn't exist, you should start "rec.radio.amateur.tech/?" It will automatically signify TECHNICAL only.
Your idea of prefacing a post with a letter or letters to tip off the reader is called stigmatizing. As long as you are on a misc. group, then be prepared to read diverse subjects by us hams.

Lord knows the kind of diversity seen here and, for the most part, it's great. That's because hams are diverse and great. You want us to be automatons. It's absurd!

Greetings,
Can anyone point me to a simple fixed frequency receiver schematic that may be posted on the net? The frequency will be in the 430MHz area.
Thanks,
Gerry

4420. Predicting Interference

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-07 00:00:00 UTC
From: Ron Hubbard <hubbard_ron@hotmail.com>
Message-ID: <8mnvvh$6u35e$1@ID-43450.news.cis.dfn.de>
Source record: 105394

I'm working on a project that involves constructive and
destructive RF interference, and right now everything is by
trial and error. Does anyone know of a formula or any rule of
thumb
that can predict whether two (or more) radio waves of
different
frequencies will interfere with each other in any way?

Any help would be deeply appreciated.

Thanks.

> Fred

What proof do you have that Rick Larson was using the aliases you list
above?

Depends on what spread of frequencies you are using. There are
bound to be some wavelengths where both are an odd number of
half wavelengths, and some where both are an even number.

You might manage to pick two lengths if you only work on a
single band: but if that was the case you would only need one of
them!

Most states have a "Good Samaritan" law that covers you when you help
at an accident site as long as you don't try to do anything that you are not
trained to do. If you have been taught how to do CPR doesn't mean that
you can put in an E-T tube or start an IV just because you are at an
accident site. The rule is just provide the care that you were trained to do.

That is pathetic! OFF Topic my keesteR! The great American Dream is about to collapse from "lack of INTERCOURSE" REGARDS OUR POLITICAL SITUATION.
AMATEUR RADIO PEOPLE SHOULD BE LEADING THE CHARGE USING THE FREE AIRWAYS. WE, COLLECTIVELY, SHOULD BE RAISING OUR VOICES TO MAKE OUR VARIED POINTS. WE AINT GOING TO GET IT OUT OF THE medjia!

I dont know from whence you originate, but if we amateurs can rumble about old chevy engines, and making hi-octane hooch, and bashing the constables for storming Waco, and what fishing lure is best for snagging mullet from the Biloxi backbay outlet of the city sewage where the surface is "walking" thick with wigglin fishes, munchin on crap, (all items overheard on assorted HF freqs withing the past 16 hours) then, we ought to be able to slip some political OPINIONS in.
After all, amateur ops are walking talking proof that everyone of em have one, or two, or three,. etc.
You and I included!

If this really rattles your cage Doc. Then you might proscribe(sic) your self some emmenagogue.

Hmmmmmmmmmm... In maritime law, if it can be proven that you could've rendered assistance, but failed to do so..... you can be sued. ....Seems to put 'responsibility' to your fellow man in a whole different light.

As to operation of a Ham Radio by an unlicensed person for emergency (Mayday or SOS) purposes..... whether or not it's 'technically' legit or not, the FCC would refuse to even consider the case. There's been several examples of ships at sea over the yrs effecting rescue via amateur frequencies... I'm sure not all were licensed amateurs, but rather using amateur rigs (cheaper) as thier Marine SSB rig.

Now in light of Gore's alleged choice of Joe L:ieberman as running mate, the campaigns will become hotter and heavier and more controversial and interesting.

It will become an even greater hotter topic on ham radio and the best I can do is to say that on 14.313 this morning, while exercising, I called CQ and KD0LA came back to tell me he wasn't on speaking terms with me which makes me wonder why he ever acknowledged me in the first place?

Now isn't that news exciting? Isn't it better than my usual controversial and stimulating posts? I hope the sissy who reported my off topic postings to MindSpring is happy but then again is anything off topic to hams? We're supposed to be a smart bunch of guys and gals, right? Not to that schmuck; to him we're supoosed to be programmed robots "Q5-S9, rig is, antenna is, QTH is, name is, please QSL." P.U.-you can have that stupid boring protocol.

Your points about N7NT Richard Kendrick are well taken. Thank you for your support.

>
I'm not talking of just 3950. As far as I'm concerned WA9KJI, K5ZU
(SK), K5BLB, W9ART and other assorted mis-fits are/were the problem
there. And as a opinion I think Riley was told to back off and let the
Liberty Net be jammed. It's not politically correct you know.

I'm talking all over the ham spectrum. Sure things are better. Sure
Riley has had an effect. But we still have Al Abernathy going up and
down 75 meters playing the Porkbutt song. We still have the
malcontents and misfits jamming 14.313 and sometimes even the Intercon
net on 14.300. And these same stations also jam the DX nets. Without
calls of course.

I could care less if Riley makes me happy. All I want from Riley is
straight talk, the truth, and for him to treat every alleged violator
the same. Not give special treatment to certain individuals. Which I
will not name here, in deference of keeping my license, and the fact
that I have a truce going with them. Not to change or make rules as
you go along. Like the Richard Whiten case. That is a total travesty
there. And if you don't think that precedent wont come back to haunt
ham radio then your plain stupid.

When 1 man is allowed total and un-challanged authority, then we have a dictatorship. I always thought we had the rite to due process. Guess I was wrong again.

That is only YOUR perverted opinion.

> in your opinion, the evils of Bill Cheek. In reality, your

MANY people feel Bill presented an evil presence online. This was
confirmed by him being kicked off his ISP (San Diego RoadRunner) for
abuse & being kicked off the Scan-L Mailing list by Peter Laws.

> At first, you started with FidoNet and Bill Cheek. When you
> attempted to disrupt and antagonize the scanner forum with your
> rude and abusive antics, you were admonished by Cheek to behave
> or face exile from the forum. Instead, you continued your nonsense

I simply disagreed with him on a topic, for which he banished me. At that
time,
Cheek was kicking about 5 people off the echo every week. He was kicking
people off who were more technically knowledgable than he or those that
he could not control & manipulate (in other words, all the GOOD people).
Fools like Blake B were the only ones left. Cheek actually honored me
by kicking me off.

> and subsequently were banished. Angered by Cheek's banishment, you

I was not angered, Cheek acutally honored me with his actions.

> followed him to the Internet where you continued to stalk and attack him.

I have never stalked anyone. However, when I arrived on this
rec.radio.scanner,
I found an all out WAR against Cheek. I simply stated my opinions on Cheek
& acted as a witness regarding his actions.

> Cheek defended himself from your attacks in the same manner and
> vocabulary that you attacked him. You couldn't intimidate him or
> your most vocal critics and resorted to rogue cancellations of

I never attacked Cheek. However, I have held him accountable
for his actions as would be done for any adult.

> their public condemnations of your actions. This cost you the
> loss of your account with your ISP Sprint. With a new account,

I have never lost an account with any ISP, including Sprint.

> It has been well established that you are a liar and a fraud whose

Please present your verifiable proof that I am a liar or be found to be a liar
YOURSELF, by default.

> Literally dozens of people have also asked you in their
> own way to cease your bad behavior.

Actually it is the other way around. Go read the message from Larry Johnson,
he is complaining about YOU, & talking about complaining to YOUR ISP of Primenet, NOT ME!!!

> demonstration of your sociopathic personality.

Please present your verifiable qualifications to make an assessment of mental issues.

TIM,

Oh REALLY???? So where were all these gutless wonders when Rich needed help? Or is it alright for a white man to get busted for racial slurs, and a blackman to get off scott free? Phil, N9GOR was JUST AS GUILTY as RICH. But got NO SANCTIONS at all. And they were in the SAME QSO. And here is the best of it all.....this episode happened BEFORE Riley came on the air and told us all that what went on before he was not concerned with. My oh My. He, the chairman of the FCC and various members of congress were deluged with tapes of this convesation. Followed by a orchestrated E-mail campaign. Don't believe me? Do a FOI and see what you get.

I AM NOT SAYING RICH WAS RIGHT. I TOLD HIM IT WAS WRONG WHEN IT WENT DOWN. HE AGREED HE SCREWED UP. I am just saying that punishment should be EVENLY APPLIED. And NOT BASED on being bombarded by hundreds, or more, of e-mails and edited tapes.

Why was a e-mail campaign not initiated to give equal treatment for the same offense? Why was there not a outcry of "foul" when Riley terminated his license based on a E-MAIL??? Because Rich is right, hams are a bunch of gutless wonders. And WHY was his appeal IGNORED by Riley for nearly a year? And has yet to be acted upon???

I rest my case. Rich would NEVER bring this up on here. He is far to proud to do that. He had nothing to do with any of the comments made here. Now who else out there has the guts to say it like it is? Prove me wrong.

4442. A Sick Kenwood TS-830S

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-07 00:00:00 UTC
From: 18745593@my-deja.com
Message-ID: <8mmth3$d3s$1@nnrp1.deja.com>
Source record: 105504

My TS-830S still appears to be sick. I ordered new finals, (4146B's), and a new driver,(12AY7), installed them and my output power is still very low.

DAN/W4NTI was kind enough to sent me the following procedure to tune it up:

http://x75.deja.com/threadmsg_ct.xp?AN=651035589.1&mhitnum=2&CONTEXT=965669457.195493918

When I tried anything past step 7 I didn't see any reponse on my meter, (i.e. when the micophone is keyed the meter doesn't respond to any PLATE, LOAD, DRIVE, CAR adjustments).

When I do transmit my SWR/Power meter shows that I'm putting out about 25-30W. My Kenwood TS-120S shows an even 100W with the same setup so I think the 25-30W is accurate. Most contacts find that I am very light but just readable.

I'm looking for any last ditch suggestions or checks I can do before I ship it off to Kenwood.

Thanks for any help!

RPC is hardly an conventional API. RPC is a real pain to use and the
Unix
RPC is different from WinTel RPC.

>
> > 2. Must be loosely or tightly linked with the application
>
> Well that is the point of having a standard API. The application talks to
> the API to do whatever it needs with the hardware.

I agree!!!!! That why I don't think they should be linked with the
application.
Having a stub object detaches the API from the application. This keeps
"clever"
programmers from by passing the API. Different thread will comment
later.

> > 3. Language restrictions.
>
> Nope. As long as the INTERFACE, meaning the size; type; and sequence, of the
> arguments, and returned data are published, you can use almost any language
> to access the API.

Not always. Try calling a Java object from C++. I do agree in a lot of
cases
it is possible, but not always clean. JNI is an example of a fairly
dirty
interface layer.

Leland, I am not sure if this is the best place to air our disagreements
(may be too strong
of a word as most of the time I find that I really agree with you but
just
looking at the issue slightly different).

Real time is somewhat of a special case. The solution however isn't
to make a end run around the API, but to create a new set of real time
APIs. Anything else is leaving the appl programmers out to dry.

Wow-hold on Darryl! I am listening to a "inprogress comms" on 20 -been going on for about 35 minutes. Couple reasonable sounding callsigned ops discussing the pros and cons of the VPs selection of the chap from CT that is to replace him.
Also, about two hours ago, on 40-several comments tossed around regards the local and national politics. On way to the firing range this AM, I monitored a Chat on 2m about the big lead the Texan is enjoying.

You write your rules, but dont expect all to follow. I got a big stake in this country-vote every election! Absentee for the 20 years I played GI overseas standing for the right of speech, and to vote, and to try to figure out what is wrong with the USA, and to believe in Mom and apple pie and baseball games, and integrity, and truthfullness.

Why pick on politics-lot of hams talking fishing - lot talking religion - lot talking trash - etc. If they are talking it on the bands, then why do you want to forbide it from appearance on this newsgroup? It is Misc. A-radio! My translation of Misc A-radio obviously aint what yours is. I Voltaire you, but I rather enjoy tracing the comments on this forum to its frequent origin in some previously discussed ham chatter somewhere else and at some other time.

Suggest Mindspring RRAM change name to "Mother May I? RRAM"
Wallah-problem solved!

Hey-in about 5 months, when the Texan gallops into D.C., the Misc (key word) Amateur radio political intercourse will fade away, and Misc can again revert to dullsville, and the bands will again sing with prostate, hernia, sugar level, fishing, grass cutting, banjo strumming, bible pumping, name calling, jamming, 5-9 mindless contacting, and the next target will be (fill in the missing word/s)

I QSL your comments old salt. Hang in there/73

I'm not sure since I don't have the 830 sitting in front of me but, if
it has a control marked "car" (thats carrier level) turn it to the
right.

Source record: 105516

Well it figures that algore and his "so called" strategists would play the religion(?) card. Especially after Hillary's boo-boo. I doubt that many will take this for anything other than patronization of a particular voting block. Don't get me wrong, Lieberman is a good choice, the problem lies with his running mate algore. Lieberman and anyone else would be worth looking at but with algore, come on, you have to be kidding, right?
One thing is for sure, we need to thank algore and his strategists(?) for putting one more *Republican in the Senate* by his selection. Thank You algore !You see, Lieberman is from a state where the goveror is Republican and if he (Lieberman) accepts will, he be replaced by whomever the Governor appoints. A republican naturally. Good stategy there?? Actually most responsible democrats are taking a good hard LOOK at the GREEN Party and Ralph Nader. Now there's someone worth Voting for. VOTE GREEN - VOTE for NADER.

I would not say disagreements either, true, but we do have a different angle
of how we look at the problem. 8-))

As a another comment about a standard API using RPC's, Real Time OS, and
mixed language calling, etc., we are really talking about two issues here.

A standard API is a "design" issue ONLY. How that design is executed is an
"implementation" issue. These are not the same. We can have a bad design
implemented on a very fast system, or we can have a great design implemented
by a kid who can't program his way out of a paper bag. I think too many
people get these two concepts mixed up. If you get poor performance how can
one be so sure it is a design problem with the API, or the API concept it
self that is at fault?

Source record: 105518

Who did not get due process? Rich? If i remember correctly Rich sent in his
license voluntarily. Yeah things are still; wrong on some bands, even on 3950
still, but they are nowhere near what they used to be. Your opinion that the
hams you mentioned being the problem *is* just that Dan, your opinion. In
fairness, I have to say that all parties involved were guilty to some extent
but rest assured, and I don't give a damn what you think of this statement, I
know that none of the problems that existed there (3950) would have evolved to
the extent that they did had it not been for the net and them thinking that
they "owned" 3950. Two warnings were given to them regarding this fact. Things
are good now so I don't bring this up to instigate, just merely to respond to
your bringing up things that "were."
As for Riley, he's a straight shooter. If you know of anyone recieving
"special" treatment and you have facts and evidence it's a little lame for you
to bitch and moan about it and then not say who, what, where, or why and
certainly not complain to the "proper" authorites. Apparently this is something
that only YOU or a few are privy to. So bitching here about it, without giving
specifcs, (i'm afraid i'll lose my license) does a lot of good doesn't it.
W4nti wrote
>I'm talking all over the ham spectrum. Sure things are better. Sure

Don't know what you want to buy, but Texas Towers, HRO, AES, Austin Radio, and a dozen others all do mailorder business and are very reliable. This is not CB!! Pick up a copy of QST and call any one of them or browse the web. Most have 800 numbers and I would call rather than try to place an order on line.

I am sure that you don't consider profanity and threats over a repeater as "wrongful", demonstrated by your action on here the last 5 years. You have no morals, scruples or conscience. The 4 hams that listened to you and the one that talked to you know you did it. 3 have posted that you did, not one person has said "No, John-Corky Mackey wouldn't do that". Not even one of your PARG buddies. Why? They know the lowlife you are John-Corky Mackey. End of story.

If your work is going to be network based and TCP/IP is the transport (or one of the transports), you may want to have a look at some of the RFCs related to realtime enhancements to and layers on top of IP. Many of the hard design issues for realtime-over-networks have been addressed. Audio/video streaming over IP depends on it, of course, as does IP-based video-conferencing. For example, I take care of video-streaming servers which are RTP-based. See the IETF workgroup web pages for audio/video transport at http://www.ietf.org/html.charters/avt-charter.html

As another example, remote videocamera control over IP has been done for at least 3 or 4 years in experimental settings. Also have a look at the IETF workgroups for quality-of-service issues at http://www.ietf.org/html.charters/rsvp-charter.html

4469. Repeater Freq for Yellowstone/Jackson?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-07 00:00:00 UTC
From: "Alan W. Dye" <adye@toadpipe.cup.hp.com>
Message-ID: <8mng06$5r2$1@web1.cup.hp.com>
Source record: 105531

Hi,

Can anyone recommend some open repeaters for use in the Island Park, Yellowstone, and Jackson area?

I'll be travelling this fall from San Francisco, through Reno, through Winnemucca to Boise, ID. Then on to Arco, Island Park and Yellowstone. On the way back, I'll drop down through Jackson, WY, over Pallisades, through Bone, into Idaho Falls, down through Salt Lake, across Nevada, back through Reno and end up home again in San Francisco.

I've got a dual band Icom 207H (2m/70cm) in the pickup and pretty much have a list of frequencies for the route worked out from the www.artscipub.com website EXCEPT for the Island Park, Idaho; Yellowstone National Park, Montanta; and Jackson, Wyoming segment.

Any recommendations for those areas will be much appreciated.

Thanks,

Alan (KF6SAM)

Guys, if you read what I posted(MindSpring's advice to me) you will see where they had two complaints. The first of course is that unrelated ham radio topics be kept outta here and secondly, political discussions can be considered "flaming." That's why I suggested we move to that newsgroup dedicated to "flamethrowing."
My question is that isn't anything provocative capable of producing "flames?" I say yes and those same flames, once also produced on the ham bands, have been extinguished by Riley Hollingsworth.
So what's next? Anyone have an idea or two? Somehow I'm getting the feeling of being trapped and ain't no vertical.

In Australia the emphasis is on the requirement to assist in emergencies and
all licensees are obliged to assist where possible. I haven't found anything
prohibiting any other person from using ham gear to assist. For comparison
, the law in Victoria Australia says that any person who can help at an
accident site and does not is breaking the law although in actual practice
I have never heard of any one being cited or charged with an offence. Like a
lot of the rest of you I have to go along with the use of common sense.
For those of you in the States who might be worrying about lawsuits -
forget it. I don't think its against the law to try to help in an emergency.

(I thought we were well beyond this kind of thing in the Year 2000....)

FULL story --->
http://news.excite.com/news/r/000805/21/campaign-gore-veep

" Lieberman's faith is a concern" - U.S. Democratic head

August 5, 2000
By Thomas Ferraro
EAST HAMPTON, N.Y. (Reuters) - Sen. Joseph Lieberman would "almost be a slam dunk" as Al Gore's choice for vice-presidential running mate, "..if he were Episcopalian rather than Jewish", said Ed Rendell, chairman of the National Democratic Committee, on Saturday.

"Joe Lieberman would be a bold and courageous choice," Rendell said, calling the Connecticut Democrat "maybe the finest person in politics" but also acknowledging concerns about a possible voter backlash against his faith.

"I don't think anyone can calculate the effect of having a Jew on the ticket," Rendell told reporters as Gore attended a fund-raiser in East Hampton, New York. "If Joe Lieberman was Episcopalian, I think he'd almost be a slam dunk," Rendell added.

Gore intends to name his choice Tuesday. Lieberman is on the short-list, along with Sens. John Kerry of Massachusetts, John Edwards of North Carolina and Evan Bayh of Indiana, House Democratic Leader Dick Gephardt of Missouri, and New Hampshire Gov. Jeanne Shaheen.

Shaheen and Gephardt have said they are not interested. But only Shaheen has said she would not accept the No. 2 slot if it was offered.

Gore has also said there is a seventh possible contender, identified only as a "wild card."

WILL STAY NEUTRAL

Rendell joked that he was for the "wild card," though he added he did not know the identity of the person. He said that each of the six known candidates would be a boost but that he was remaining publicly neutral and would not endorse anyone.

At the same time, he threw out a couple of other names as potential contenders: Sen. Bob Kerrey of Nebraska, a veteran of Vietnam, where he won the Medal of Honor, and former New Jersey Sen. Bill Bradley, whom Gore defeated for the Democratic presidential nomination earlier this year.

Rendell said Kerrey's war-hero status could be a boost to Gore, who also served in Vietnam as an Army journalist. Rendell said that if Gore picked

Bradley, a former Rhodes Scholar and professional basketball player, that would also trigger excitement.

Asked what Bradley would bring to the ticket, Rendell said, "Intelligence, integrity and stature and (the states of) Pennsylvania, New Jersey and Delaware."

Rendell said Gore might have picked Defense Secretary Bill Cohen as his running mate -- if Cohen had not said he intended to vote for fellow Republican George W. Bush for president.

"He'd be dynamite," Rendell said of the former Republican senator from Maine.

Of Lieberman, Rendell said, "Maybe that is what we ought to do is pick the finest person in politics -- I think it would be great."

Asked if Lieberman's faith was enough of a concern to rule him out, Rendell shrugged and said, "I'm not sure that the people who would vote against us because Joe is Jewish aren't going to vote against us anyway."

4478. Re: (P) Nov.7th

well that sounds like a good solid suggestion. From now on the (P) will be in the subject line of all posts that call for it. If the rest doesn't like it (P) on them. LOL
Now Charlie, as for the discussion you heard, I ask you, are you sure that you were listening to the Laurel & Hardy no one in there "right" mind would actually believe that was a serious statement. Peace and prosperity huh. Well that's what the liberal socialist democrats want you to think. It lulls you into a political sleep. That's what has allowed the most "corrupt" administration in history to exist and to get away with the majority of crimes "they" commited. The "only" reason this nation has had peace for so long is thru "strength," military strength that is, which has been so shamefully depleted by you know who. The only reason this nation has had such prosperity recently was because of "trickle down" economics, not tax and spend, lie, cheat, and steal that the current admin. uses daily.
Check your staion tuning again Charlie, turn everything more to the "right," you may then be able to hear something of substance instead of the politically "cute"
"slick slogan" (you mean slick, as in willie?) that the socialist democrats put out for all of you that need touchy feely one liners instead of a good dose of truth and substance.
VOTE - GREEN .... VOTE for NADER !!!

4479. Re: AF2Y: a VERY serious post

Well I have to agree with you in part Rich. Riley will accept a lie, but remember, some of the ones doing the "lying" are devious and good at it. The lies then fit the situation and thus look differently.
In all fairness to Riley I have seen him, when "presented" with the truth, rescind, back down, undo, and admit being wrong about any circumstances he may have set in motion. A man that can do that when shown to be incorrect is in my opinion a good fair man. Actually Rich, I think that you should just see about getting your license back and quit your bitchin. Riley has had a job to do, by doing "it", he was bound to have some opponents and some friends. when I go to 313 and listen, I don't hear the BS that I heard even a year, to a year and a half ago, same thing applies to 3950. How would you judge a man's performance, by the job that he's done? Or the friends or enemies he's made?

that is a big tain-fore, old salt.
I demand to have the right to listen to you on amateur radio, or on the internet. If the forum doesnt like it, then remove the forum!
Your conduct is continually legal. Your rather dull but barbed comments at least keep me thinking. While we must wait intil after Nov 7th, I will say to you then, what I say to you now---na na nanana na, see I told you so! We have two politicos - The vp guy who maintained very low posture when the CIC was having his root knawed(sic)on in our oval office, and the texan, who promises he wont act like that.
If he does, we the people can slide him down a 50 ft razor blade into a bucket of alcohol. But I am betting my poke he wont!
It isnt a matter of political party. It is a matter of national pride. the 42nd man to be elected to the highest office in our great country, inherited a lot of heavy baggage and had the responsibility to conduct affairs with integrity, and honesty! Doesnt matter what those before did in or out of the office. We expect the appointed leader to represent ALL of US. When the CIC arrived D.C. on the first day as prez, comming down the ladder from the aircraft, and flipping the bird to a saluting decorated marine honour guard doing his duty, that bird image suc-ed (sic).
The texan promises not to do that. And I am betting my poke he will properly salute!
The VP works for the CIC-kind of an understudy. After eight years he seems to have captured the act well.
Me, I want some change. Eight years of slipping and a sliding is enough for this old GI. Lets get it on (Mills Lane for Prez).
If, after four years, it aint on the way to being fixed - integrity, honour, truth - then I am shipping out!

anyhow old salt-keep on keeping.

As for RH-he just be a ham and he be doing a pretty good job!
Instead of focusing his energy on you, He could usefully capture the pathetic 3950 dweebs that continue to annoy like the hemroids they are. You know who I mean-the guy that leaves his mic open, digging deep to clear his lungs and throats with those big hawkers, and then swallowing them, and the cw sender of BS BS, and the slabber jaws that only targets certain stations on that polarized freq and the freak that is continually stalking some of the people with "get out of here XXXXX!" and the marching band music Title 17 violator, and the other fly by night pond scum that annoy like dung flys (sic) (not to insult decent flies). May thier sphincters mold shut.

So, keep up the chatter-I enjoy it.

Percy Q Armyballs III
Col., etc

You sound like the damn liberty net. Does it really matter whether "who" got "popped" gave a frickin callsign or not? The point *is* (there's that word again) That "violators" got popped. Besides I do recall a few getting "popped" that didn't give callsigns, Of course if YOU are only talking about 3950, which *is* damn sure what you sound like, then you may be "unhappy," but what the hell, you'll fit right in, everyone on that net seems unhappy and bitchy. LOL.
Give the man the credit he's due, he can't make everyone "happy" and I'm sure that he's NOT trying to. Catching ALL violators *is* probably impossible. Given time I'm sure that there will be more. Of course even then/those, may not make you "happy."

> *you* worked at that office and not your retired father.
Please present your proof or the above, or be found to be a liar
AGAIN, by default.

> 13. I proved you lied when you claimed that Bill Cheek had never
> been a member of Mensa.
Please present your proof or the above, or be found to be a liar
AGAIN, by default.

> 14. It's been proved by others that you lied when you claimed
> to have never lost an ISP for your forged cancels.
I have never lost an ISP. If yoiu insist on this then please present your
proof or the above, or be found to be a liar AGAIN, by default.

> 15. It's been proven by others that you lied when you denied
> using numerous fake identities on the Internet.
I have never used a fake ID. Please present your proof or the above,
or be found to be a liar AGAIN, by default.

> 16. It's been proven by others that you lied when you denied
> you've never blown up a repeater system through your incompetence
> and total lack of technical expertise.
Please present your proof or the above, or be found to be a liar
AGAIN, by default.

> 17. It's been proven by others that you lied when you denied
> trying to break into other computer systems using Back Orifice.

I have never done what you state above, if you insist on this, then present your
proof of the above, or be found to be a liar AGAIN, by default.

> 18. It's been proven by others that you lied when you claimed
> you had "acquired MORE FCC licenses ... than could be counted
> on one hand!"
I never made the above statement. If you insist on this then present your proof of
the above, or be found to be a liar AGAIN, by default.

> 19. It's been proven by others that you lied when you claimed
> you have made your "lioving from the Radio Communicatoins Field
> for most of the last15 years."
Please present your proof of the above, or be found to be a liar
AGAIN, by default.

> 20. It's been proven by others that you lied when you denied
> having stalked Bill Cheek for over three years.
I have never stalked anyone. If you insist on this then present your proof of
the above, or be found to be a liar AGAIN, by default.

> 21. It's been proven by others that you lied when you denied
> being kicked off Fidonet by Bill Cheek.
I was never kicked off Fidonet by anyone. If you insist on this then
present your proof or the above, of be found to be a liar
AGAIN, by default.

> 22. It's been proven by others that you lied when you claimed
> Bill Cheek had been kicked off of Fidonet.
I never said he "had been kicked off of Fidonet". If you insist on this
then present your proof of the above, or be found to be a liar
AGAIN, by default.

> 23. It's been proven by others that you lied when you claimed
> a police had been filed supposedly about harassing phone calls
> made to you at your place of work.
I never "claimed a police had been filed supposedly about harassing
phone calls" as you state above. If you insist on this then present your
proof of the above, or be found to be a liar AGAIN, by default.

> 24. It's been proven by others that you've emailed death threats
> to your detractors on the Internet.
I have NEVER done this as you say immediately above. If you insist
on this then present your proof of the above, or be found to be a liar
AGAIN, by default.

> 25. It's been proved by others that you lied when you claimed to
> "have helped resolve" the problems of the scanner newsgroups
> and have "rid this NG of trouble makers."
Please present your proof of the above, or be found to be a liar
AGAIN, by default.

> 26. It's been proven by others that you lied when you denied
> sending bogus complaints using aliases to the Internet providers
> of your detractors.
I have NEVER done this as you say immediately above. If you insist
on this then present your proof of the above, or be found to be a liar
AGAIN, by default.

> You have been proven to have many other identities. A couple of years
> ago, I posted a list of over a dozen aliases that you have used.
I have NEVER done this as you say immediately above. If you insist
on this then present your proof of the above, or be found to be a liar
AGAIN, by default.

Without knowing your route, that would be difficult.

Are you taking I-15 ... or taking US-395 to I-80? (Or something inbetween such as US-6?)

Yes. My packet station literally takes out cable channels 18 (2m), 24 (125cm), and 60 (70cm) in a three block radius. Cable in my neighborhood was laid over 30 years ago. However, that's tough. Although you're north of the border, here in the U.S., we only have to observe the "quiet prime time" rule where interference is with a broadcast signal received with an antenna - and cable TV doesn't count (since it's not received with an antenna and the cable company's "head" isn't in my 3-block radius). Maybe your Canadian rules has something similar to our 47 CFR 97.121?

It's also quite possible that there is no leak and the fault lies with your neighbor's TV set itself.

I agree with Bob's recommendation, but let me add that a quick and dirty "fix" is sometimes the so-called "driven ground."

Cut a length of any wire to 1/4 wavelength at the center of the band in question. Drape it along any handy supports keeping it away from metal if possible. Tape up the "far" end since it will be hot with r-f and connect the "close" end to whatever you choose to call the "station ground."

Since the wire is in the near field of the antenna, it will absorb some energy and develop maximum r-f at the open end. Since it is 1/4-wavelength long, the end attached to the station ground will be driven to near zero r-f potential. Because of these actions, current will flow in the wire and it will radiate so be careful where it is dressed to avoid RFI issues.

This accomplishes the same goal as the series tuned circuit, et al, at much less cost and complexity. Plus, it is automatically tuned!

Good to hear from you again, Bob.

Rich, I am interested in what your saying. Before I had a chance to read everything I had to re-format the HD. The items you sent were rather lenghty, thus, I didn't get thru everything when the computer crashed. But i would sure like to read them and see for myself . If you'd care to send them again I'll do just that. You and Dan have always shot straight - so I'm wondering ......what the hell went on.

Aw, what the heck, Roy- When signals are running 20 dB over S9, 18 dB loss really isn't that big a deal. Sorta depends on the context. I don't know what Kurt's context was, but what is completely acceptable in some circumstances isn't in others. The B&W terminated folded dipole is an excellent example.That lossy antenna was successfully used very widely in government and military installations for many years.

Web,
A 'straight' key is used to manually produce Morse code. All
parts of each character is produced by the user's sense of timing,
and hand movement.
An 'Iambic' key is used in conjunction with an electronic keyer
to produce a 'string' of dots and dashes automatically. These are
then combined to make each character.

Here in Southern California, you don't need two frequencies. Just go over to
147.435 and you're guarenteed 100% interference! ;-)

Actually, try looking at the sum and differences of any two frequencies and see
if those combinations also happen to be any of the IF's used in (any of) the
receiver(s). Then, if using more than two frequencies, look for combinations
of three or more in the same manner.

The thing that puzzles me is all the folks putting thousands into towers and beams. They're flat wasting their time. To get 18 dB over a dipole requires about 16 three-element beams or equivalent, so the gain of even the hugest HF antenna farm is obviously insignificant. What a waste of time and money.

On the flip side of that, some people are now saying a few dB of gain
change results in receiving level changes of several dB because the
ionosphere is not linear.

Some of that is based on a recent QST article where a large curtain
antenna was compared to a tribander.

It looks like antenna sales literature, offered under the disguise of
an article, has become a source of reliable information on how
everything works.

This install sugestion is elaborate, but worth while if you wont to protect your equipment and your vehicle. This also adds the benifit of opperating with your ignition and motor turned off.

Purchase a quality battery, a dry cell or gell cell is ideal, especially the marine type that can handle being drawn flat dead and recharged without any problems. Install a battery isolater ratted around one hundred and fifty amperes. Connect your power cables to this new battery, be sure to fuse both your power and ground cables. Do not forget the ground from frame to battery. Connect the isolator to both of your batteries and then to your alternator. For added protection against line voltage drop you can home build a capasitor pack, the larger the pack the more voltage change at high current it can handle using appropeitly ratted parts.

Not, your radios are isolated from your vehilcle electrical system and the only interference possible is from RF. Propperly sheilded cables will take care of this aspect. Best of all, now you can opperate without burning up a tank full of gas!

Opperating time is about and hour at full power and steady use. Charge time, as long as it takes to get where you are going. I run this set up in my 98 Ford F-150 without any faults.

Yes, but 6-8 db gain with a yagi isn't that hard, and not only do you quadruple your effective ERP, but you benefit on receive as well. And a big plus to a yagi is the side and back rejection - which helps a lot when working crowded bands. Personally, I'll take a good yagi over a dipole and amp any day.

Check ALL voltages at the tube sockets. Power on of course and
per the manual/schematic. My guess is your grid bias is way off.
This can be due to a leaky bypass cap or resistor which
has changed value with age over time, or while in service.

Also clean all rotary switches with non-residual type spray cleaner.
Blue Shower (available via www.hosfelt.com or www.techni-tool.com
is good stuff and is non-reactive with most polymer based switches.
TEST FIRST to be sure! Place a drop on the outside of the switch
under a strong light and look for any crazing or blemishes. If they
occur do not use it!!! Use 91% isropropyl alcohol to clean it instead.

Finally, are the tubes good? Be sure. Substitute a known-good set
or find an old-timer who had a tube tester.

Also, look for burning or carbon-paths on the underside of the tube
finals sockets. Clean with a toothbrush dipped in alcohol and cover
with Corona-Dope high voltage potting compound. Let the C-D dry
overnite or better for 24 hours at room temp.

Okay, let's try this one.

The FAA is adamant about something aside from smoking on domestic flights which I have no interest in anyway. Smoking is for dummies, period.

Have you flyers noticed that before takeoff, the "stews" will tell you about electronic equipment during the flight? During takeoff and landing, everything's off limits i.e. laptops, phones, AM & FM radios and anything else I'm forgetting to mention.

But then, once reaching the crusing altitude, the sky's the limit EXCEPT for a standard AM-FM radio. On it, one sends out no signal whatsoever compared to other devices, yet if one disobeys that FAA ruling, once that plane lands, it's ARREST TIME!

WHY THAT RULING? Tnx.

Doc,AF2Y

It could have been worse. Gore could have chosen a Jewish woman.
Yep, Lloyd, it's all over and your man has won on Aug.8th. Now it's time for the Chief Justice of the Supreme Court to go over the swearing in ceremonies with President Bush and Veep Cheney. Gee, that was one quick run for the White House. Oh well, the Dems can look forward to possibly regaining it in 2004.

Yes, but.....The implementation made at Ohio State Univ. which I saw
a few years back was actually part of an H.263 videoconferencing stream
with camera-control add-on (assuming my memory is reliable), so the full
data stream included realtime video feedback (MPEG1 if I remember) and
audio channel. Obviously this is closer to realtime radio control
requirements.

I believe that the IETF RTP website which I mentioned above has some
drafts on videoconferencing payloads on top of RTP. Also, I should have
mentioned the IETF diffserv workgroup which studies the quality-of-service
issues which will be important for realtime commodity-internet (as
opposed to realtime radio-shack-intranet :-)

One can't claim that RTP and RSVP will necessarily dominate realtime IP in
the final analysis, or even that realtime IP itself will dominate. It's
going to take a while for the dust to settle. I just wanted to point out
that public standards and vendor implementations of RTP and RSVP do exist,
and that it might pay to build on that previous work.

This is very interesting stuff and I would very much like to see us
get to the point of using RTP, but I think it will be awhile. I like
CORBA and RMI, but they will haven't matured enough in the PC space
to make them workable yet.

I would like to suggest that the goals of SDAR be as follows:

1. Conventional API Standards Spec and code created with distributed
concepts in mind.

a. Radio Control Standard API
b. Log file format API
c. Rotor control
d. Digital Keying both CW and Voice
e. DSP

2. Convert the above API into a distributed system such as CORBA, RMI,
COM,
DCOM, XML-RPC or RPCs.

3. TBD

Of course much of this could be done simultaneously. The two important
things
for me is that it remains Open and OS independent.

I believe that you need a non-linear device to act as a mixer in order
to produce harmonics, but sum and difference frequencies will appear
wherever the signals mix.

Cell phones will not cause problems with the avionics!! The problem is that at 20 to 30,000 feet....there would be so many cell sites seeing the phone, it would cause chaos, and extreme switching confusion. The Cell Phone industry is actually 'against' such approval......for obvious reasons.....

Readers,
There are now 86 messages displayed on alt.radio.scanner.flame_fest/

Could be catching on. As I scan the subjects I see "hail hail the boys are all here, almost" from this board. N0VFP, W4NTI, Osmama yo' Momma, Rich, Hoover, no monkeys, Dave Windisch, KK7HO, cw, redrum, Howard and Kelly Lute, Jeff Herman & AF2Y. Where is the Chipster?

Come join us. Blow off steam. It's a great place for Dems to knock Reps and vice versa. We can do a Don Rickles on each other and no one on rec.radio is gonna go bawling to our servers.

If you're free spirited, feisty, argumentative and opinionated, friend or foe, climb aboard. But then again if you're just a tech minded ham, keep the hell away or we'll blow ya out of the water. Hey Sparks, how about you? You wrote me a technical e-mail but something tells me you're a hellraiser too. The group is for MEN who can take it, so climb aboard the Insult Express and GIVE IT.

Doc,AF2Y

Maybe 6 dB equals one "S" unit on your meter, but not on mine. On my ICOM 730, one "S" unit is 1.3 to 4.0 dB, depending on where on the scale you are. "9 + 10 dB" is 5.6 dB greater than S9, and "9 + 20 dB" is 12.9 dB over S9. An 18 dB reduction in an S9 signal will take you down to just above S1, well into the normal noise level on the lower frequency bands. The vast majority of QSOs I've had over the years are with stations whose signals are well below S9, so an 18 dB reduction in their signal strength would make them unreadable. But if your operating consists entirely of chatting with your local buddies on 75 meters (which must be the case with "Sterba"), you can probably tolerate an 18 dB reduction without noticing the difference.

What sort of rig do you have that has 6 dB per "S" unit on the meter? As far as I can tell, that's very unusual.

Adam,
There are two types of 'switching' power supplies. One is made
for communications use, the other is not. The ones ~not~ made for
communications use are the 'ultimate' square-wave generators. The
ones made for communications use are 'cleaned' up. It isn't a
simple matter of filtering the output, 'cleaning' the noise up means
going all through the supply with suppression circuits.
If the advertisement doesn't say it's for communications use, ask!
If they say it isn't noisy, ask if you can return it if it is noisy.
If they say no, shop somewhere else.
'Doc

Doc,
One reason is that all AM/FM radios produce a signal because of
the IF conversions. Depending on the frequencies the manufacturor
selects to use, they can interfere with the various navigation radios
in use. Ever had two radios next to each other and have them cause
interference between them selves?

Hello
I'm new to Amateur Radio and I have a few questions. I don't have a radio yet and I was wondering if anyone has any recommendations. I want a hand held that costs $200 or less. And my other question. If I was transmitting at 5 watts without a repeater, about how far could I communicate with another person using 5 watts and a hand held in simplex mode? Thanks in advance.
Ken

4564. Re: WHAT PROGRAM CAN DO THIS ????

DXbase 2001 has rotor control plus everything else under the sun in an intuitive easy to operate interface. The database itself uses the Microsoft Access database format and as such is extremely robust and rugged. One can also have internet and VHF DX clusters both going at the same time. It also prints custom qsl cards. It is compatible with and supports all the CD Rom callsign lookup CD's. This is a case of there being " too many features to mention " I have used it since DXbase 2000 without ever having one single program crash ever. It is a reliable workhorse that is capable to meet the needs of the serious DX'r and is also just as home logging a rag-chew QSO with an old friend.

It does require a Pentium so it is not for everyone I suppose. I have a link to the demo on my site on the Software Downloads page.

I was thinking the same thing. You would think that if the guy is
going to spam newsgroups, he would at least make an effort to spam
groups where there might be at least some possibility of interest in his product.

But, hey, you never know. Perhaps in the future people with tiny
radio minitures pierced through their nipples will become a common sight
at club meetings and swap fests.

Can't beat an Astron for quality, performance, and durability.
For a 30A load, you'll need the RS-50A or RS-50M (metered).

Hi Everyone,
I am soon to be the proud owner of a IC746 and i need to purchase a power
supplie,

Ive had many people tell me that Watson Power Suplies give off a loud
buzzing noise on the signal when TXing.

Ive also been told to stay well clear of Switched Mode stuff, however Icom
uses Switched mode in their matching PSUs, Confussed? i am.

Any suggestions with brands(and stockists) that have worked best for you
would be very handy, has anyone had the probs described with the Watson
PSUs....Please let me know...Also your experiences with Manson and Diawa
brands.

P.S I will need to run 30A at 100% Duty cycle.
(I like a PSU that can pull more power if needed)

Yaesu makes a FREE Frequency Allocation and World Map.
Got mine at "Yaesu day" at Ham Radio Outlet. (be careful though
as some "dealers" charge for them, although Yaesu gives them away
for free)

What 'Doc said, and also, I have read that some of the allow/disallow (although it varies between airlines--some are OK with handheld GPS units, others will ban them altogether) has to do with shielding. For instance, a laptop PC has been (somewhat) shielded, whereas your typical AM/FM radio is probably as leaky as a sieve, RF-wise.

Go here:
http://joe.mehaffey.com/gpsrfi.htm

There's a decent page that is GPS-centric, but it is still informative. Plus there are some interesting links, as well.

It was my understanding that each "S" unit on your meter represents a 6 db change in received signal strength. So if the person transmitting increased power from say 20 watts to 80 watts, a power increase of 4, then you would see a 1 "S" unit increase in the received signal from the formula 10 log 4 = 6. I believe that this is explained in the ARRL handbook.

In article <3990CB44.16247F9E@eznec.com>,

Gentlemen and I use that term loosely:

I checked 14.313 this morning and heard nothing. Even Intercon was barely audible. 14.275 was bare. I then did a quick SWL to East Cars on 7.255 and there was a fool on there trying to sell memberships to that useless garbage net for $5 a throw.

I mean can you imagine is this day and age of cell phones, anyone dumb enough to drag along a mobile rig to call into East Cars to have them phone patch him in to Aunt Mable, 35 miles away? They ought to rename it the Dinosaur Net since it's usefulness and necessity are 165 million years old. Or how about "Jurassic Cars."

I certainly hope this ham only posting satisfies Gene and anyone else who demands the strictest obedience to newsgroup rules and please, don't anyone place an "H" for ham to the left of the subject line. That's profiling.

It's as intolerant as making certain people wear yellow stars, pink stars etc. That kind of garbage should have died out along with the Third Reich.

May the Lord bless and keep you all. God love you and bestow His profoundest blessings upon your kishkas and hoden.

Sincerest 73,

A switched mode PSU specifically designed to power a rig, will be
(or better be) heavily filtered. I have a US 80A+ switched mode
unit, designed for I know not what, which is completly clean.
£20 at Longleat. Fan's noisy though.

>Any suggestions with brands(and stockists) that have worked best for you

Can't you do a deal to get a PSU thrown in? I did with W&S.

Do you REALLY need 30A continuous? Seems excessive to me.

Sheepfornication
Psycho Jim's from "Minnesoter"
Trys to steal your sheep for his perverse desires
Little ewes from the next farm over
Dreams of wooly bleating bovines
And if you want these kind of dreams
It's Lysen's Sheepfornication
It's the shithole of the world
And all of western civilization
The sun may rise in the East
At least it settles in the final location
It's understood that Glenwood
sells Sheepfornication
Pay your sheriff very well
To keep your ass out of jail
Animal balls rests on Lysen's chin
Or is that a goiter you're dragging
Chorus:
First exposed by his daddy's horn
Hard core soft porn
Dream of Sheepfornication
Dream of Sheepfornication
Marry me sheep be my fairy to the world
Be my very own constellation
A wooly bride with a baby inside
Getting high on agricultural information
And buy me a salt lick on the boulevard
It's Sheepfornication
Cloning may be the final frontier
But it's made in a Glenwood basement
Listen can you hear the squeals
Singing while Jim gets off off station to station
And Algernon's not far away
It's Sheepfornication
Born and raised by those who praise
Control of population the Lysens have been there and
I don't mean on vacation
Chorus
Selfloathing leads to a very rough road
But it also breeds creation
And Lysen's shakes are to a sheep's guitar
They're just another good vibration
And libertarianism couldn't save the world
From Sheepfornication

Pay your sheriff very well
To keep yourself out of jail
Lysen's sicker than the rest
There is no test
But preverted sex is what he's craving
Chorus

"Adam Waterson" <adam.waterson@btinternet.com> writes:

>Ive also been told to stay well clear of Switched Mode stuff, however =
>Icom uses Switched mode in their matching PSUs, Confussed? i am.

Switching supplies have high-amplitude fast rise time transients in the internal circuitry. IF they are not adequately filtered, they can get out and be picked up as noise by a receiver. In addition, switchers are complex feedback circuits and hard to fix if they ever fail. On the positive side, they are much much smaller and lighter than a conventional linear supply for the same power output.

Old-fashioned linear supplies have no high frequencies that need filtering, and the circuitry is usually pretty simple. But they are large and heavy and give off a lot of heat.

I have an Astron switching supply rated at 15/18A that I use to power an FM rig (144/440). It's specifically designed for radio use, and I have not noticed any problems of radiated noise. The supply has a small fan that will come on if the internal temperature gets high enough, but I have never been able to get the supply more than warm and the fan has never come on. Without the fan, it's dead quiet.

Well, actually, it makes a little bit of noise if the load is too small. Before I got the dual-band mobile, my home radio was a handheld mounted on a MAHA "booster" amplifier. This setup draws 8 A when transmitting but only about 50 mA during receive. The handheld also has a "battery saver" mode that reduces the current even more, to about 20 mA, most of the time. At that very low current, the Astron supply was switching its internal oscillator on and off many times a second to keep the output voltage from rising, each time producing a tiny "tick". Thus, I could hear a low-level "buzz" from the power supply during receive, and the buzz was modulated by the battery saver wakeup time. Just turning off battery saver mode mostly eliminated the sound.

With the mobile rig, the radio draws about 1 A during receive, the power supply oscillator stays running all the time, and there is no audible noise at all.

Dave

Unfortunately, this is a myth which is impossible to kill. The ARRL, "Kurt Sterba", and other prominent writers all insist on using the term "S-Unit" to mean 6 dB. (Why they don't just use dB has always escaped me.) The problem is that virtually every receiver sold has a meter which is labeled "S Units", and the marks on these are very seldom 6 dB apart. They vary a great deal from receiver to receiver, and frequently differ from one part of the scale to another, and from one band to another. All the S meter on a typical receiver does is read the AGC voltage, which is only approximately a logarithmic function of the signal strength. An S meter with 6 dB per unit would be considered by most amateurs to be pretty dead. So when reading the writings of the ARRL, "Sterba", and others, convert their "S-Units" to 6 dB, but don't confuse them with the marks on your receiver's meter. If you do, you can be wrong by a very, very, large amount.

It's easy to measure your S meter with a step attenuator you can build in an evening.

>handbook.

It's also on the amateur exam, I believe.

Unfortunately it is not correct. It's more of a pipe dream than
anything else.

Collins, Drake, and many others never even tried to use 6 dB per S
unit. For example, the Drake R4C uses 5 dB per S unit as the
scaling...although the receivers don't even work out to that value!
Collins clearly uses a scale that is 40 dB from S0 to S9 on my 75S1
receiver. I know that because the scale is marked both in dB and S
units, and 40 dB is right above S-9.

I own about half dozen transceivers (Collins, ICOM, Yaesu), and a few
receivers (Collins, Drake, Heathkit, Hallicrafters).

None of them have meters that show 6 dB is an S unit.

Most of my receivers actually are around 1 dB or so per S unit at the
lower end of the scales.

It's unfortunate we suffer the myth that S units are all six dB, when
most receivers tried to use 5 or less.

Maybe they just need to insert the adjectival phrase "theoretically ideal"
in there somewhere, such as:

"That's only three, theoretically ideal S-units difference..."

or:

"Doubling power only buys you 1/2 S-unit on a theoretically ideal
receiver."

Gee, this dead-thread flogging is kinda fun. ;-)

Hello, I've just moved to a new house, wanting to get the antennas up and can't use the windows for 'plexiglas passthroughs' as these new ones are all double pane, swing in, etc..... SO... anyone have a good source for a wall passthrough, maybe some nifty trickery that can be achieved with a simple square cut through the wall or whatever? Like a commercial roof passthrough but not so big. I hate to chop into the siding though.... Maybe a better idea? something homegrown is best or no? I don't have an antenna farm and I think this could be done in the same space as a double outlet box, or maybe I'm wrong. any input appreciated.
Please email me direct!
thanks!
Randy

> Cell phones will not cause problems with the avionics!!

I question this assertion. I would like to see some tests done
under actual field conditions (aircraft in flight, trained tech observers
in place to actually try it) before I believe it.

I will say that, given the frequencies a cellphone operates at, the
most likely point of interference would be the ATC transponder.

> is that at 20 to 30,000 feet....there would be so many cell sites
> seeing the phone, it would cause chaos, and extreme switching
> confusion. The Cell Phone industry is actually 'against' such
> approval......for obvious reasons.....

That I could believe. However, keep in mind that there is the
'Airfone' service from GTE that, supposedly, operates in the same bands
as cellular (I've not verified that).

I use the RST system for signal reporting. It's been published for many years in the ARRL Handbook, and probably predates the S-meter. You can find the definitions on p. 30.51 of the 1997 Handbook, the most recent I have. S7 means "moderately strong signals".

My experience when working with other CW operators is that they give roughly similar reports, so receipt of an S7 report conveys some meaning. As arbitrary as this system is, it's much more consistent than the vast differences in S-meter readings from one rig to another.

If you don't use the RST system, what system do you use?

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr36_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr36_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr36_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Hi Everyone,
I am soon to be the proud owner of a IC746 and i need to purchase a power supplie,

Ive had many people tell me that Watson Power Suplies give off a loud buzzing noise on the signal when TXing.

Ive also been told to stay well clear of Switched Mode stuff, however Icom uses Switched mode in their matching PSUs, Confussed? i am.

Any suggestions with brands(and stockists) that have worked best for you would be very handy, has anyone had the probs described with the Watson PSUs....Please let me know...Also your experiences with Manson and Diawa brands.

P.S I will need to run 30A at 100% Duty cycle.
(I like a PSU that can pull more power if needed)

Well each 6 db equals one "S" unit on your meter, so 18 db is three "S"
units. Not too bad...
And 18 db represents the equivalent of 64 times your current output
power. Remember on the licence exam: db = 10 log pwr_diff, so:
10 log 64 = 18.

Not too shabby.

He said he needed 30A 100% duty cycle and I think the R/V-S-35 series
only can handle 25A continuous. I'd recommend one of the Astron 50
series, like the RS-50A without the meters, or the RS-50M if he wants
metering, they are rated at 37A continuous. Whatever the case unless
portability is an issue I'd *definitely* go with the standard
(non-switching) type supply and for my money Astron is about the most
reliable trouble free PS of the bunch. YMMV.

Man, what Radio do you own? I have never found any of the rigs I've
ever owned to even come close to 6dB per S-unit... My present one is
about 3ï¿½ per. And that varies for band to band.

It depends on band, antenna, terrain, obstructions, elevation, etc.
Considering if we're talking 2 meters and you are on the same elevation
on flat land with minimal obstructions using stock rubber duck antennas-
probably 2 to 5 miles. This will vary when one or more of the
aforementioned factors come into play.

In a word, go with an Astron. Whether it is a conventional type, or a switching supply, you can't do better. Just be sure to get one large enough to give you a little headroom. Personally, I have had excellent service from their RS-35M and RS-70M models for many years.

Additionally, in a related survey, it was learned that 100% of the original poster of this message routinely touches himself in an erotic and self-gratifying manner most Friday and Saturday nights (but most likely several times each day of the week) because he can't get a date and his dog died. He wishes he had a decent radio, but spends most of his money on porn and tissues.

We have to eat poorly and cheaply so that we get high cholesterol die at an early age, leaving our heirs to have "estate sales" when we go, so that used equipment is always available. It's kind of like perpetual motion or a simple life cycle of hams and used stuff. We buy used stuff at estate sales when we are young...we further our hobby buying new stuff. As we age and die prematurely due to contesting and diner food, we leave a glut of used stuff for the next youngster to buy. Since our heirs never really know what our stuff is worth, there's always a bargin somewhere to be found. A newbie buys it, grows in the hobby, ages and eats cheap food at diners, and so on and son and so on.....

I was in communication with Bill, when he was in the Navy, in Calif.
He helped me a bunch, on building communications gear. His small
trailer was left at my place near Albuquerque, on his way back East,
when it broke down after he got out. Came back later and picked it up.

We are providing the Technician, General and Extra exams, along with several other categories, such as the FAA pilot exams.

http://www.webexams.com

It is free. We are not charging or requiring e-mail addresses.

You can take predefined or randomly generated tests, design your own tests, browse through questions and answers, have exams and questions emailed to you, and more. Exams can be timed or open-ended, and you can pause or suspend exams as interruptions occur. You can track your progress, and focus on your own weak areas, all free of charge.

Visitors to the site have told us it is very helpful in preparing for the radio exams, and a fantastic confidence builder.

We are very excited about providing this free, the way we think it should be, and would love to have feedback on how to improve the work we have done. In addition, if there are other exams you would like to see up, please let us know!

Dave

But Osama bin Salami, that's what puzzles me. A receiver RECEIVES. Are you
and others saying that a hand held AM-FM radio gives off a signal that
conflicts with those heard and sent by the captain? Apparently the other Doc
from Oklahoma rendered the explanation but keep in mind that if I'm sitting
in a plane in let's say Row 25, all the way in the rear(wise guys shut up),
I'm like a football field away from the cockpit.The explanation is still
valid under those circumstances? I can understand how it applies to the rich
Republicans flying in FIRST CLASS, but in the case of us average Democrats,
-it's DISCRIMINATION!

Wherever there is a receiver, there is a local oscillator.
Wherever there is an oscillator, there is a transmitter.

By nature, the local oscillator in many electronic devices
emits RF. It is this RF and harmonics that are the concern.
LCD watches, AM/FM radios, CD-players, handheld GPS's, etc.
all emit RF to some degree.

Avionics and communications aboard a modern jet airliner can
be affected by these devices. Antennas are installed at various
points along the fuselage, and one may be near your seat. Even if
it is attached under first class, your leaky device (can I say that
on TV?) may cause interference 1/2 a mile away.

Also, avionics devices are installed in many areas of the aircraft.
Sure would be a bummer if a passengers' CD-player was competing
with control signals to an RF-controlled servo for trim control.
(I don't know if this scenario is accurate, but that's the jist
of what I had read.)

The "shark fin" appendages on a plane are actually FM antennas,
I believe, and they are located above or below the passenger
sections.

I came across an interesting magazine or web page on this very
subject...I'll try an locate it.

PS I bought the cheapest DVD player on the market since I felt that
spending $500+ for a unit that might soon become obsolete seems to
be making less and less sense as time goes on. It is a home unit, the
same size/footprint as average stereo gear, and the manufacturer is
"Konka", straight out of China, I think. I have been happy with its
performance, and I thought to myself, "Cool. This only cost $149, which
is about the depreciation I would take on a more expensive unit after
a week." Along the same timeframe as my installation of this unit, I was
experiencing horrible intermod on 144.39MHz, APRS. My TNC won't transmit
if the radio's squelch won't close, so I was off the map. Changed
feedline, antennas, radios, etc., still no go. After some time had
passed, and I was taking a fresh look, I realized that the DVD player
was leaking RF; I turned off the main power, voila, no more intermod.
Turn on the standby power to the DVD, the intermod was back.

I don't know of the harmonics, if any that this unit emits, but I am
sure they exist when it has power. I guess I could take my HT and
criuse around the neightborhood to see just how far this interference
might reach. It could be many football fields' worth...

Yep, another chap wrote me that although that may have been a standard very few (if any?) manufacturers adhered to it, which is disapointing. I still use the S meter on my Yaesu for reports as S1 is really weak, and S8 or 9 means that I need to punch in the attenuator. However on my meter-less QRP rigs I use the ARRL method of how-readable-is-it.

Actually my original comment was to someone who felt that an 18db antenna gain was trivial, and I was pointing out that that was a respectable amount of gain.

Yep, I really don't even look at the S meter when working CW as far as
giving a report. My ear pretty much tells me the appx S/N ratio, and I
report from that. A medium signal usually 579. A weaker sounding signal
that is totally readable but sorta in the noise rates a 559, etc. I
hardly ever give reports on fone, unless a one on one new QSO. As I'm
usually just yik yakking on fone, I don't usually give a report unless
they ask for one.
I use the S meter alot comparing signals though, but use fast ant
switching to get an accurate indication. But don't really think of it in
any certain db. I have used the 6 db per S meter as examples a few
times, but more theoretical than actual real world. I guess I oughta
quit doing even that, but old habits die hard. :/ MK

Obviously a non ham wanting to get around the testing to talk on the ham freq's.
If he was a ham he would be proud of his call sign, I am K5JOE, what is yours?

BD wrote:

BD, since you are obviously not a ham, are you going to use the information you got about emergency use by non-hams to talk on the Ham bands? My guess is yes. If you had a call sign you would be proud enough of it to put it on the end of your emails. Mine is K5JOE, what is yours?
I see where you did some research on use of non hams talking on ham freq:

{{Is it legal for a non-ham to use a ham-radio in an emergency?
If so, what kind of emergencies would it be ok for such use? ;)
I've done a little bit of research (I admit it's not been much) and can't find any reference to anything similar..
Thanks.
PS. Yes, I'm a ham.. Just wondering..}}

Yea right.... If you are a ham, tell us your call sign.
K5JOE

Yes, I am. Thanks for asking.

Doing PSK31 Alot, one of the most amazing and easy modes of Operating ever.

go to http://www.qsl.net/k8cpa and check out the link to psk31 info page, to find out about it.

I'm also getting on 75 meters, not very often, as I'm working alot of hours, and just don't have alot of time on my hands. and for the record, CD, It's Chuck, Not chuckie... I'll tell you what, you call me chuck and not chuckie and I'll call you CD and not Nigger boy. Deal?

Subject: Evidence John Mackey Lied About His "Articles"
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

OK Toilet Boy, you say you've written lots of articles for the
ARRL and other technical journals. The ARRL does not show you as
author for anything and no articles in ANY technical journals
have been found. Here is the proof that you lied about your
articles.

Several people have visited the ARRL Web Site (www.arrl.org), and
searched, finding nothing written by you. You claim they used
faulty search methods. Here are the results of my search of the
ARRL Web Site using "john mackey" and "ka0ssf" as search
parameters. Before you get all excited and claim my search method
was faulty because I did not use any capitalization, the search

engine is case INsensitive.

Regarding the search for "john mackey," the first, third, and fourth hits showed only because of "John" and "Mackey". The second hit refers to The ARRL Letter for July 5, 1996. That was the issue the contained the item about PARG catching a jammer.

Regarding the search for "ka0ssf," the only hit was a duplicate from above.

The original article appeared on the PARG web page (www.parg.org) does not credit you as the author. That article is reproduced below in its entirety. The next article is from the HamRadio Online website (www.hamradio-online.com), also reproduced below in its entirety, does show you as author. Finally, the item in The ARRL Letter is shown below as well. It does not credit you as author either.

It is interesting to note that the HamRadio Online piece appeared in the June 1996 issue and the PARG piece appeared in July 1996. Why would your own group not credit you with authorship? Why would you use the email address of someone else (mscott@teleport.com) instead of your own? Oh yes, I remember now. That was the time (March through August 1996) that you were using one of eight bogus addresses because you were stealing Internet access. Let's see, you were using the addresses:

John.Mackey_Jr@p234.f40.n105.z1.fidonet.org
John.mackey_jr@p234.n40.f105.z1.fidonet.org
Here.now@present.com
no.address@anywhere.com
no.address@anywhere.gov
No-place@anywhere.org
no--place@any-where.com
no__place@any__where.com

Comparing the three articles side by side, it is very clear that the first article, which appeard in HamRadio Online, was reworked for the PARG web page. Then the ARRL edited it for their use. No matter how you slice it, you have not written several articles, as you've claimed.

Again, Toilet Boy, you lied.

And now, the evidence:

Amateurs Locate Police Jammer in Oregon

by John Mackey, KA0SSF, mscott@teleport.com

During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham
convention was being held, a group of hams belonging to PARG
(Phantoms Amateur Radio Group) were down on the beach front
enjoying the annual PARG bonfire. One of the hams (KB7YZS) was
monitoring the local Seaside Police Dept. He heard someone
cursing and yelling at people. At first he thought it was
coming from the UHF side on his hand-held transceiver, but to
his surprise it was coming from the VHF side which was
monitoring the police.

He promptly notified everyone at the bonfire to listen. After a
few minutes of listening to the person, the members had figured
out that the person was up in a balcony, was with 3 or more
people and 2 of which were females. They realized this because
of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP)
just happen to be most of the PARG Interference Committee. They
immediately activated the PARG Interference Committee direction
finding operations. They promptly tracked down the interference
to a specific location of the Shilo Inn and searched for someone
matching the description. After only 5 minutes they saw a group of
people on the third floor of the Shilo who matched the description.
Then they saw him pick up his hand-held transceiver and speak into
it. At the very same moment the voice on the police frequency was
saying "Hey, fat ass, yea you in the black pants and the white

shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to

watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at http://www.teleport.com/~mscott/dumb.shtml.
You can contact PARG at

PARG, PO Box 1586, Beaverton, Oregon 97075-1586
Phone 503-818-PARG (24 hours)

The PARG Crack
The Official Newsletter of the Phantoms Amateur Radio Group
"We are anything but complacent"

July 1996 - Portland, Oregon - ONLINE EDITION

Interference Committee Stops Californian Jammer

The SeaPac ham convention was saved once again by PARG representatives. In a valiant effort to restore peace and safety to the coastal community, members of the PARG Interference Committee assisted Seaside Police officers in the apprehension of an individual jamming their dispatch frequency.

During the annual PARG bon fire, several members of the Interference Committee were monitoring the local police dispatch frequency. As they were completing a safety check of the area before returning to their accommodations for the evening, the Committee members heard someone sending malicious transmissions on the VHF dispatch frequency. Immediately, the field operations of the Interference Tracking Unit (ITU) were activated and the search began for the jammer.

After a relatively short and efficient investigation, the ITU determined that the illegal signal was originating from a shore front hotel. This information was derived from both direction finding techniques and verbal clues left by the jammer.

The group immediately broke into two teams and sent a representative to contact a police officer who was patrolling in the area. The other team went to the hotel from which the suspected jammer was transmitting and watched his room for a possible escape attempt.

Soon after contact was made with the police department, the suspects were seen going down the hotel stairs and away from the building.

During the time that the suspects were out, the jamming ceased. About two hours later, the jamming started up again. When this happened, the officer the PARG representative had contacted returned to the room and apprehended the suspect.

According to reliable sources, the suspect, KE6VNU was arrested by the Seaside Police Department for the charge of Interfering with a police officer in the line of duties. In addition to being involved in this situation, the jammer was allegedly involved in similar activities in Sacramento County, California.

The outcome of any prosecution will be covered in a later edition of the PARG Crack.

PHANTOMS HELP NAB "THE PHANTOM JAMMER"

The Phantoms Amateur Radio Group (PARG) of Portland, Oregon, is claiming credit for helping police to nab "The Phantom Jammer," who was interfering with police calls in Seaside, Oregon, during the Northwest Division Convention in early June. John Mackey, KA0SSF, of PARG reports members were on the beach enjoying the annual PARG bonfire when KB7YZS heard someone "cursing and yelling at people" on the VHF police frequency, which he was monitoring at the time. After a few minutes of listening, members figured out that the person was up in a balcony and was with a mixed group. KB7YZS, KB7YZR, N7XMD, and AA7UP (who just happen to be most of the PARG Interference Committee) immediately activated direction finding operations and tracked down the interference to a local motel. It only took them a few minutes to spot a group on a balcony, one of whom was using an H-T. After noting that the transmissions coincided with what they heard on the police frequency, PARG informed Seaside Police. A short time later, Mackey reports, Seaside Police "caught the person in the act."

Seaside Police subsequently charged Bobby Lee Aguero, KE6VNU, of Rocklin, California, with interfering with a police officer. As we've already reported in The ARRL Letter and in QST, Aguero, 19, already faces similar charges in California.

Mackey said this was the second consecutive year PARG got to provide a public service during the Seaside convention. Last year several PARG members apprehended a purse thief--after a brief foot pursuit--returned the purse to its rightful owner, and detained the suspect until police could arrive. PARG has a Web page at http://www.teleport.com/~mscott/dumb.shtml. The group's current president is Justin Bousquet, AB7NG.

Message-ID: <19971217040221.25634@ns.sol.net>
Newsgroups: news.admin.net-abuse.usenet

This data has been gathered by Joe Greco and sol.net Network Services
as part of an ongoing project to monitor Usenet trends and abuse.

There are currently two items scanned:

1) "From:" header
2) "NNTP-Posting-Host:" header, if present

All articles sharing the same header (i.e. all articles with a
"From:" header of "jgreco@ns.sol.net") are counted together, with
a summary of the number of posts, bytes posted, and BI. Only
articles that have a BI of 20 or greater are summarized.

Please remember that BI is a general formula to measure the
number of groups posted to in a manner which favors crossposting.
The fact that the posts of a single poster may have a BI of 20
does not imply that the articles are spam, as each article may
have been completely different and unrelated.

Let's see, according to WhoWhere? <http://www.whowhere.com>, you've used
no less than sixteen obviously fictitious Internet addresses. These are
just the ones where you were stupid enough to use your callsign. You
might plausibly claim one or two were used by someone impersonating you,
but you can't claim all of them Toilet Boy.

In light of the abuse you've managed with fraudulent address, your
ragging on Bill Cheek about the WinRadio issue in the manner you
have been, makes YOU the hypocrite here, as usual.

That's an apples and oranges comparison. The time periods are not equal.
But, you're too stupid to understand such simple concepts, Toilet Boy.

==========
You claimed you were not the most proflic poster of off topic messages.
You lied.

With the aid of DejaNews, I have analyzed the quantity of postings by several regular posters in the alt.radio.scanner and rec.radio.scanner news groups for a one year period and compiled the statistics. The full one-year period between August 1, 1997 and July 31, 1998 was examined on a month by month basis. All the the people were subject to the same search and level of scrutiny.

Seven people who are, or who have been accused, of being high frequency posters were selected. Those people are John Mackey, Bill Cheek, Richard Kendrick, Blake Bowers, George Vetterle, allsafe, and K4CC. The addresses
used by these individuals were the seed for the search.

In the case of Mackey he has used ten different addresses during the selected time period and all ten were used. Those address are: jmackey@usa.net, jmackey@parg.org, kaossf@parg.org, jmackey@parxg.org, jxxxmackey@uxxxsa.net, ka0ssf@premovearg.org, jmackeyremove@usa.net, ka0ssf@paremoverg.org, and jmackey@pio.net.

Bill Cheek changed from cts.com to san.rr.com before the examined time period and his posts from that domain are not included in this survey. The address used was Bill Cheek <bcheek@san.rr.com>.

George Vetterle changed providers, but this only added five to his total count of messages posted. The two addresses surveyed are: geovet@ix.netcom.com and geovet@thevision.net.

The other address used were Richard Kendrick <wa7twi@primenet.com>, Blake Bowers <bbowers@townsqr.com>, <allsafe@netwit.com>, and <k4cc@aol.com>.

This is the quantity of postings broke down on a month by month basis for each of the people named above. If a message was cross-posted to both qroups, it was only counted once.

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0

SEP 97 | 181 | 78 | 0 | 2 | 4 | 0 | 0
AUG 97 | 29 | 2 | 0 | 1 | 2 | 0 | 0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

AVG/DAY| 5.86 | 6.43 | 0.55 | 0.56 | 0.75 | 0.73 | 0.93

AVG/ADJ| 5.86 | 6.43 | 0.95 | 0.74 | 0.75 | 1.09 | 3.72

The TOTALS are the sum of twelve months of posts for that individual.

The AVG/DAY is the average number of posts per day based on the formula TOTALS / 365.

The AVG/ADJ is TOTALS / SUM OF DAYS IN TOTAL MONTHS OF POSTINGS is the average number of posts for the actual days in the news group. The adjusted value is because some of the posters had a 0 for any given month(s).

The two months marked with an asterisk (*) for Bill Cheek are inflated values. The actual values are probably much lower because these values included the reposts of the messages canceled by John Mackey.

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

For the others, between one-eighth and one-half of the posts made by them were pertaining to scanners and scanning.

I use WD-40 all the time on swiches (rotary, AC power, relays, you name it), noisy potentiometers, sticky slugs in old UHF rig inductors, locks, and anything else that slides or turns. Doesn't hurt any of 'em. It's one of the Great Inventions of the 20th Century (along with latex paint and plastic drinking straws. .)

Subject: Proof of Bill Cheeks Mensa Membership
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

I have been able to verify that Bill Cheek did indeed once belong to American Mensa, as he claimed. In the 1983/1984 Directory of American Mensa Membership, there is a listing for William David Cheek, 235 Pike Street, Golden, CO 80401, (303) 279-1447. Bill Cheek was not listed in the 1985, or subsequent editions of the directory.

A check with the National Mensa office in Fort Worth, TX revealed the following facts about a persons membership. Once a person has qualified for membership, he is qualified for life. He may let his membership lapse at any time for any reason. He may then rejoin at any later time by simply paying the current dues. A members IQ does not drop as soon as his membership expires, as John Mackey would have us believe.

Gee, it looks like Bill Cheek DID tell the truth, unlike John Mackey.

So that's how you're trying to describe suppressing the truth about you,
Toilet Boy? You can keep trying to emulate your Nazi propaganda heroes,
but you're out of your league there. You lack the intellect to
understand
their methods.

Here are a few pieces of evidence for you chew on, Toilet Boy.
This should keep you frothing for a while. You know the rest of
the evidence exists; this is enough to prove my point. You are
a liar and a fraud, Toilet Boy.

To your dimwitted friend Larry Johnson, two things:

First: Not only is the emperor wearing no clothes, but he's
wearing last year's fashion.

Second: Go commit intrapersonal intercourse.

Newsgroups: rec.radio.scanner,alt.radio.scanner
Subject: Evidence John Mackey Lied About His "Articles"
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

OK Toilet Boy, you say you've written lots of articles for the
ARRL and other technical journals. The ARRL does not show you as
author for anything and no articles in ANY technical journals
have been found. Here is the proof that you lied about your
articles.

Several people have visited the ARRL Web Site (www.arrl.org), and
searched, finding nothing written by you. You claim they used
faulty search methods. Here are the results of my search of the
ARRL Web Site using "john mackey" and "ka0ssf" as search
parameters. Before you get all excited and claim my search method
was faulty because I did not use any capitalization, the search

engine is case INsensitive.

Regarding the search for "john mackey," the first, third, and fourth hits showed only because of "John" and "Mackey". The second hit refers to The ARRL Letter for July 5, 1996. That was the issue the contained the item about PARG catching a jammer.

Regarding the search for "ka0ssf," the only hit was a duplicate from above.

The original article appeared on the PARG web page (www.parg.org) does not credit you as the author. That article is reproduced below in its entirety. The next article is from the HamRadio Online website (www.hamradio-online.com), also reproduced below in its entirety, does show you as author. Finally, the item in The ARRL Letter is shown below as well. It does not credit you as author either.

It is interesting to note that the HamRadio Online piece appeared in the June 1996 issue and the PARG piece appeared in July 1996. Why would your own group not credit you with authorship? Why would you use the email address of someone else (mscott@teleport.com) instead of your own? Oh yes, I remember now. That was the time (March through August 1996) that you were using one of eight bogus addresses because you were stealing Internet access. Let's see, you were using the addresses:

John.Mackey_Jr@p234.f40.n105.z1.fidonet.org
John.mackey_jr@p234.n40.f105.z1.fidonet.org
Here.now@present.com
no.address@anywhere.com
no.address@anywhere.gov
No-place@anywhere.org
no--place@any-where.com
no__place@any__where.com

Comparing the three articles side by side, it is very clear that the first article, which appeard in HamRadio Online, was reworked for the PARG web page. Then the ARRL edited it for their use. No matter how you slice it, you have not written several articles, as you've claimed.

Again, Toilet Boy, you lied.

And now, the evidence:

==== Article from HamRadio Online, www.hamradio-online.com ===
==== June 1996, reproduced without permission ===

Amateurs Locate Police Jammer in Oregon

by John Mackey, KA0SSF, mscott@teleport.com

During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham
convention was being held, a group of hams belonging to PARG
(Phantoms Amateur Radio Group) were down on the beach front
enjoying the annual PARG bonfire. One of the hams (KB7YZS) was
monitoring the local Seaside Police Dept. He heard someone
cursing and yelling at people. At first he thought it was
coming from the UHF side on his hand-held transceiver, but to
his surprise it was coming from the VHF side which was
monitoring the police.

He promptly notified everyone at the bonfire to listen. After a
few minutes of listening to the person, the members had figured
out that the person was up in a balcony, was with 3 or more
people and 2 of which were females. They realized this because
of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP)
just happen to be most of the PARG Interference Committee. They
immediately activated the PARG Interference Committee direction
finding operations. They promptly tracked down the interference
to a specific location of the Shilo Inn and searched for someone
matching the description. After only 5 minutes they saw a group of
people on the third floor of the Shilo who matched the description.
Then they saw him pick up his hand-held transceiver and speak into
it. At the very same moment the voice on the police frequency was
saying "Hey, fat ass, yea you in the black pants and the white

shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to

watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at http://www.teleport.com/~mscott/dumb.shtml.
You can contact PARG at

PARG, PO Box 1586, Beaverton, Oregon 97075-1586

The PARG Crack
The Official Newsletter of the Phantoms Amateur Radio Group
"We are anything but complacent"

July 1996 - Portland, Oregon - ONLINE EDITION

Interference Committee Stops Californian Jammer

The SeaPac ham convention was saved once again by PARG representatives. In a valiant effort to restore peace and safety to the coastal community, members of the PARG Interference Committee assisted Seaside Police officers in the apprehension of an individual jamming their dispatch frequency.

During the annual PARG bon fire, several members of the Interference Committee were monitoring the local police dispatch frequency. As they were completing a safety check of the area before returning to their accommodations for the evening, the Committee members heard someone sending malicious transmissions on the VHF dispatch frequency. Immediately, the field operations of the Interference Tracking Unit (ITU) were activated and the search began for the jammer.

After a relatively short and efficient investigation, the ITU determined that the illegal signal was originating from a shore front hotel. This information was derived from both direction finding techniques and verbal clues left by the jammer.

The group immediately broke into two teams and sent a representative to contact a police officer who was patrolling in the area. The other team went to the hotel from which the suspected jammer was transmitting and watched his room for a possible escape attempt.

Soon after contact was made with the police department, the suspects were seen going down the hotel stairs and away from the building.

During the time that the suspects were out, the jamming ceased. About two hours later, the jamming started up again. When this happened, the officer the PARG representative had contacted returned to the room and apprehended the suspect.

According to reliable sources, the suspect, KE6VNU was arrested by the Seaside Police Department for the charge of Interfering with a police officer in the line of duties. In addition to being involved in this situation, the jammer was allegedly involved in similar activities in Sacramento County, California.

The outcome of any prosecution will be covered in a later edition of the PARG Crack.

========== Article from The ARRL Leter, www.arrl.org =========
========= July 5, 1996, reproduced without permission ========

PHANTOMS HELP NAB "THE PHANTOM JAMMER"

The Phantoms Amateur Radio Group (PARG) of Portland, Oregon, is claiming credit for helping police to nab "The Phantom Jammer," who was interfering with police calls in Seaside, Oregon, during the Northwest Division Convention in early June. John Mackey, KA0SSF, of PARG reports members were on the beach enjoying the annual PARG bonfire when KB7YZS heard someone "cursing and yelling at people" on the VHF police frequency, which he was monitoring at the time. After a few minutes of listening, members figured out that the person was up in a balcony and was with a mixed group. KB7YZS, KB7YZR, N7XMD, and AA7UP (who just happen to be most of the PARG Interference Committee) immediately activated direction finding operations and tracked down the interference to a local motel. It only took them a few minutes to spot a group on a balcony, one of whom was using an H-T. After noting that the transmissions coincided with what they heard on the police frequency, PARG informed Seaside Police. A short time later, Mackey reports, Seaside Police "caught the person in the act."

Seaside Police subsequently charged Bobby Lee Aguero, KE6VNU, of Rocklin, California, with interfering with a police officer. As we've already reported in The ARRL Letter and in QST, Aguero, 19, already faces similar charges in California.

Mackey said this was the second consecutive year PARG got to provide a public service during the Seaside convention. Last year several PARG members apprehended a purse thief--after a brief foot pursuit--returned the purse to its rightful owner, and detained the suspect until police could arrive. PARG has a Web page at http://www.teleport.com/~mscott/dumb.shtml. The group's current president is Justin Bousquet, AB7NG.

This data has been gathered by Joe Greco and sol.net Network Services
as part of an ongoing project to monitor Usenet trends and abuse.

There are currently two items scanned:

1) "From:" header
2) "NNTP-Posting-Host:" header, if present

All articles sharing the same header (i.e. all articles with a
"From:" header of "jgreco@ns.sol.net") are counted together, with
a summary of the number of posts, bytes posted, and BI. Only
articles that have a BI of 20 or greater are summarized.

Please remember that BI is a general formula to measure the
number of groups posted to in a manner which favors crossposting.
The fact that the posts of a single poster may have a BI of 20
does not imply that the articles are spam, as each article may
have been completely different and unrelated.

Let's see, according to WhoWhere? <http://www.whowhere.com>, you've used
no less than sixteen obviously fictitious Internet addresses. These are
just the ones where you were stupid enough to use your callsign. You
might plausibly claim one or two were used by someone impersonating you,
but you can't claim all of them Toilet Boy.

In light of the abuse you've managed with fraudulent address, your
ragging on Bill Cheek about the WinRadio issue in the manner you
have been, makes YOU the hypocrite here, as usual.

That's an apples and oranges comparison. The time periods are not equal.
But, you're too stupid to understand such simple concepts, Toilet Boy.

==========
You claimed you were not the most proflic poster of off topic messages.
You lied.

With the aid of DejaNews, I have analyzed the quantity of postings by several regular posters in the alt.radio.scanner and rec.radio.scanner news groups for a one year period and compiled the statistics. The full one-year period between August 1, 1997 and July 31, 1998 was examined on a month by month basis. All the the people were subject to the same search and level of scrutiny.

Seven people who are, or who have been accused, of being high frequency posters were selected. Those people are John Mackey, Bill Cheek, Richard Kendrick, Blake Bowers, George Vetterle, allsafe, and K4CC. The addresses
used by these individuals were the seed for the search.

In the case of Mackey he has used ten different addresses during the selected time period and all ten were used. Those address are: jmackey@usa.net, jmackey@parg.org, kaossf@parg.org, jmackey@parxg.org, jxxxmackey@uxxxsa.net, ka0ssf@premovearg.org, jmackeyremove@usa.net, ka0ssf@paremoverg.org, and jmackey@pio.net.

Bill Cheek changed from cts.com to san.rr.com before the examined time period and his posts from that domain are not included in this survey. The address used was Bill Cheek <bcheek@san.rr.com>.

George Vetterle changed providers, but this only added five to his total count of messages posted. The two addresses surveyed are: geovet@ix.netcom.com and geovet@thevision.net.

The other address used were Richard Kendrick <wa7twi@primenet.com>, Blake Bowers <bbowers@townsqr.com>, <allsafe@netwit.com>, and <k4cc@aol.com>.

This is the quantity of postings broke down on a month by month basis for each of the people named above. If a message was cross-posted to both qroups, it was only counted once.

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0

SEP 97 | 181 | 78 | 0 | 2 | 4 | 0 | 0
AUG 97 | 29 | 2 | 0 | 1 | 2 | 0 | 0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

AVG/DAY| 5.86 | 6.43 | 0.55 | 0.56 | 0.75 | 0.73 | 0.93

AVG/ADJ| 5.86 | 6.43 | 0.95 | 0.74 | 0.75 | 1.09 | 3.72

The TOTALS are the sum of twelve months of posts for that individual.

The AVG/DAY is the average number of posts per day based on the formula TOTALS / 365.

The AVG/ADJ is TOTALS / SUM OF DAYS IN TOTAL MONTHS OF POSTINGS is the average number of posts for the actual days in the news group. The adjusted value is because some of the posters had a 0 for any given month(s).

The two months marked with an asterisk (*) for Bill Cheek are inflated values. The actual values are probably much lower because these values included the reposts of the messages canceled by John Mackey.

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

For the others, between one-eighth and one-half of the posts made by them were pertaining to scanners and scanning.

I use WD-40 all the time on swiches (rotary, AC power, relays, you name it), noisy potentiometers, sticky slugs in old UHF rig inductors, locks, and anything else that slides or turns. Doesn't hurt any of 'em. It's one of the Great Inventions of the 20th Century (along with latex paint and plastic drinking straws. .)

Newsgroups: rec.radio.scanner,alt.radio.scanner
Subject: Proof of Bill Cheeks Mensa Membership
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

I have been able to verify that Bill Cheek did indeed once belong to American Mensa, as he claimed. In the 1983/1984 Directory of American Mensa Membership, there is a listing for William David Cheek, 235 Pike Street, Golden, CO 80401, (303) 279-1447. Bill Cheek was not listed in the 1985, or subsequent editions of the directory.

A check with the National Mensa office in Fort Worth, TX revealed the following facts about a persons membership. Once a person has qualified for membership, he is qualified for life. He may let his membership lapse at any time for any reason. He may then rejoin at any later time by simply paying the current dues. A members IQ does not drop as soon as his membership expires, as John Mackey would have us believe.

Gee, it looks like Bill Cheek DID tell the truth, unlike John Mackey.

I used 4 inch PVC floor flange designed for mounting a toilet to
the floor with the appropriate fittings.

I go through the soffet and across the attic crawl space to the
shack then down through the wall into the room. The extra space
in the PVC is stuffed with fiberglass insulation and this keeps
birds, bats, and bees out.

I even have 7/8 inch hard line going through with no difficulty.

No. I never use the S-meter reading for issuing a signal report. It would be meaningless to the other station, since he has no idea of its sensitivity -- or my noise level, for that matter.

An online list (where one can select just the open machines) is at:

http://rptrlist.w6jpl.ampr.org

This list, sponsored by the JPL ARC, may also include repeaters which are not coordinated, which will obviously not be listed at the FC's web sites (which are also not searchable by such criteria).

**** Stop wasting your time and money at XXX web sites!! ***

Why pay $360.00 a year at adult web sites when they hardly ever update their site or add new material? Not only do you have to wait for the material to download, but the picture quality and the frames per second rates are pathetic.

Imagine having everything an adult web site can offer you and much more on CD Multimedia! Not only would you be saving hundreds of dollars, but there would be no more waiting for downloads! No more poor quality streaming videos! You see everything the very instant you choose it!!! The XXX videos are shown at 30 fps instead of the 1 fps adult web sites offer you! Take a look at all you'll get when you order our Adult Multimedia pack:

- Easier, and quicker navigation than any adult web site can offer.

- Over 100,000 XXX pictures in EVERY category from hard-core to underwear pics. With a lightning fast searchable database to find only the pictures you're interested in.

- Built in slideshow and picture viewing software that'll keep track of your favorite pics on the CD.

- Over 30,000 XXX videos at the quality adult web sites cant offer you! All movies have a preview thumbnail and description so you know you'll be interested before you watch!

- The best of prerecorded hidden camera action. (Footage includes: Dressing rooms, public showers, hotel rooms, college dorm rooms, up skirt, bathrooms, swimming pools, bed rooms, parties, Las Vegas, Mardi Gras, and tanning beds)

- Over 100 of the hottest XXX games! (These games alone can be found priced at $10 to $39 each!!!)

- 1,000's of hot erotic stories. All with a short description to find exactly what you're looking for. Some stories are recorded in audio with some of the sexiest sounding voices you'll hear. Try finding that at any adult web site!

No multimedia has to be copied to your hard drive. Everything can be ran from the CD's!

If you don't agree that the Adult Multimedia Pack is better than any adult web site, send it back and you'll receive your money back, no questions asked!

Here's how you can get your hands on the Adult Multimedia Pack:

- -

Send your orders to:

V-Tech
10500 Sherman Grove #210
Sunland, CA 91040

Enter your shipping address here:

Name_____

Address_____

City_____ State_____ Zip_____

Make checks or money orders payable to: V-tech Software

( ) Adult Multimedia Pack Vol I.....$14.95
( ) Adult Multimedia Pack Vol II.....$14.95
( ) Adult Multimedia Pack Vol III.....$14.95
( ) Adult Multimedia Pack Vol IV.....$14.95
( ) All four Adult Multimedia Packs.....$34.95 (saving you $24.85)

Choose what type of computer you'll be using:

( ) IBM PC or compatible ( ) Macintosh

There is no extra charge for shipping and handling. All orders are shipped discreetly.

Each multimedia pack contains unique material. All packs combined will give you over 3 gigs of the hottest most erotic adult material available on computer.

YOU MUST BE OVER THE AGE OF 18 TO PURCHASE THIS SOFTWARE!!!

Nuther possibility is to come out under the bottom edge of the siding.
Drill through at a steep angle. This works good, except in termite country.

I once did a nice pass-through using 1" white PVC pipe... I happened to have an 18" drill-bit extension that had a 1 1/4" hole-saw mounted on the end, I had recently used that rig to drill out the mufflers on a new Harley) so I put the hole saw with extension back on my drill, picked a nice spot high on the inside wall, and near a window, and drilled right on through to the outside. I drilled at a slight upward angle; maybe 20 degrees.

Then I put a 90 degree "elbow" fitting on one end of a 10" piece of 1" PVC pipe, went outside and found my ladder so I could climb up and stick the pipe through the hole I had made. I used "Liquid Nails", a construction cement, to fix the pipe in place and seal up my wooden siding so there would be no leaks. I pointed the end of the "elbow" down toward the ground.

I gave the "Liquid Nails" a day to dry, then I sawed the extra pipe sticking through my interior wall so that it stuck out only 1/2" or so. Then I used ordinary window caulking to "cover the ugly", using a wet finger to create a smooth fillet around the pipe and fill the gap. (Yes, I used spit to get my finger wet.) I gave the caulk a couple of days to set up and dry out a bit, before using the pass-through. That's optional, if you are in a hurry. Last, I used "Coax Seal", that gooey black tape-like stuff to seal the outside of the PVC "elbow" once the coax was in place. The elbow already points down, promoting the use of a "drip loop" in the coax, so water isn't a big problem. Still, there are dust and bugs to consider.

The pass-through looked fairly official, and did a good job. I'd recommend a bigger PVC pipe/Hole-Saw combination, though, if you have more than one bit of coax to route.

Safety Tip: While merrily drilling through your wall, make sure that you are not drilling something dangerous like an electrical wire or gas pipe, or something embarrassing like a water or telephone connection. When you get through the interior wall, pull out the hole-saw and see what else you will be drilling through before proceeding any further. It hardly ever hurts to be careful, but not being careful can really hurt bad, and almost certainly will after a while. Go with the good odds and think carefully about what you are doing.

The IRTU rules specifically allow any person to use any
radiotelecommunications, whether licensed or not, to summon help in a
distress situation.

Distress is defined as when life is in imminent danger.

Note the imminent. That means right now, not may be in a few minutes. Also
note that it is life, not injury we are talking about and not property.

Tom, I have no idea where the S-unit is legally defined. I'm practically certain it is nowhere. But I'm sure its not a criminal offence anywhere on earth not to comply with it. Nobody is having their arm twisted to adopt it. For some reason some people attempt to ridicule other people who mention it. Does it have to be written in the Constitution before anybody recognises its existence? In the UK we are done for - we don't have a Constitution.

Is there no such thing as a 6-inch ruler because a standard 6-inch rule is not kept locked up in the Tower of London alongside the Crown Jewels.

The S-unit is just an obvious way of describing a significant change in signal strength when a one dB change on the 20m band is much too small to mean anything of consequence.

Clearly a defacto standard has existed for many years. Everywhere on Earth where commercial amateur radio receivers are made the S-meter is graduated from zero to S9 somewhere around mid-scale to S9+40dB or S9+50dB when the pointer is hard over. I assume they were reluctant to continue from S9 to S10, S11 etc, because the 1920's and 30's meaning allocated to S9 was "Very Loud" and in the absence of screen-grid vari-mu valves (toobs), any louder would have been deafening.

It is a natural question for a manufacturer to ask when setting up the assembly line with a tuning-up work-bench at the end : "To what shall I instruct the pretty little testing girl to set the signal generator?" And the answer is a nice round figure of 100 microvolts open circuit from a 50-ohm source at 7 MHz.

(Have you ever asked any one to think of a number between 3 and 10 and wondered why its always 7 ?)

I suppose I first took notice of the 6dB per S-unit in the 1950's. I have a vague recollection of reading something in Wireless World.

For the last 10 years or so, since the tuned first RF stage disappeared and the antenna went straight to the 1st mixer, receivers from all sources have become standardised. They

use similar chips, the same number of IF stages, similar agc circuitry, etc. One S-meter looks and behaves very much like another. They are now far more capable of being used as RF volts or power meters than they were when you and I were boys. There is a linear-log meter scale which is good enough from S4 to S9+50 - a range of 80 dB. Outside that range an error of 10 dB or a couple of S-units is much better than not having the slightest idea.

It turns out that if you had to design a 50-ohm HF receiver for optimum sigal to noise ratio for the range of signals encountered by amateurs between 1.8 and 30 MHz, for the most linear logarithmic scale on a meter you would find that the most appropriate mid-scale level from the signal generator is 100 micro-volts open-circuit from a 50-ohm source.

That level has long been used by all amateur receiver manufacturers and is descibed in the maintenance handbooks. Peculiarly enough - Bingo - it corresponds to S-9 or "Very Loud".

From some remarks made on this NS a year or so back, in the 1950's the US military specified this in the acceptance test routine when purchasing a batch of receivers from a well known US receiver manufacturer. No doubt the military copied the clause from the manufacturer's own test schedules.

A last comment : On a linear dB meter scale, S9 is half way beween the mixer noise level in a 3 KHz bandwidth across 50 ohms and the strongest signals which can be received without undue intermodulation products. The meter scale best fits when an S-unit is made equal to 6 dB. We are drawn inescapably to that value. Funny how it corresponds to a voltage ratio of 2:1 eh?

Hello all,
just a note to publicise our club operating at the
"Astle Park Steam Tractor / Engine Rally"
held near Chelford, Cheshire this week end.

Listen out for GX4MWS/P or GX1MWS/P and give a call in
we welcome all contacts.

PS
as the WX looks like it is going to be good why not come down
to the show if you are in the area

73 Martin and all at GX4MWS / GX1MWS

Obviously you're the kind of knucklehead whom we do not want on the flamefest. You'd add nothing to it but negativism providing of course you know what that means.

Thanks Reg.

I assumed it was a number just pulled out of thing air, and you have
nothing offered that indicates otherwise.

Unless someone who is never wrong, like Chip, defines an S unit as 6
dB then I guess we will all have to agree it isn't a standard.

Still offering the QRO HF-2500DX QSK amplifier for sale. New $2895, new asking price is $2000 or trade for Heathkit SB-220 amp plus $1500 cash. Condition is very good. Less than 50 op hours. I am original owner. Buyer pays shipping. If trade, SB-220 must be in excellent condition with low hours on tubes.
Only flaw on HF-2500 are minor scratchs on top cover front to back edges.

Has anyone considered the simplier approach of using existing technology? For example, has anyone tried an interface based on MIDI? MIDI can handle a large number of input/output channels, can quickly transfer large amounts of data, and is not controlled by a single company or organization.

While MIDI was designed for music devices, it can control all types of other devices as well (lights, stage props, and others). Therefore, I see no reason why it could not be built into a radio to handle radio control. Users would then be able to use industry standard MIDI interfaces and cables.

It would also be easier to write software if the companies agree on a common MIDI setup inside the radio (this MIDI command controls this, this command controls that, etc).

Of course, this would require radio makers to build MIDI ports into their products (and agree on a common internal setup). And, like others have said, that may be the biggest problem - most companies like the proprietary approach (they make more money by cutting out competition).

But that's the problem. It isn't associated with a particular signal level at the input to the receiver. Would you care to measure the signal level which gives an S7 reading on your meter? I'll do the same with mine, and we'll see just what information would be conveyed to someone by telling him that his signal is S7 on an S-meter. Of course, the reading will be different depending on whether I have the preamp in or out, and probably different on each band, but we'll post all the combinations. Ok?

I recall asking several times whether you've checked your S meter and gotten either a negative response or none at all. This will be a good exercise for you, and you might be surprised at the result.

Tom, it's not the '6db per S-unit' standard which is at fault - it's the calibration of your receivers. No measuring instrument is perfect but, by definition, a standard is immaculate.

But as you know your S-meter errors you will be able to apply appropriate mental corrections when issueing signal strength reports. ;o)

Hey all,

I'm going to be in Boston area all next week (Chelmsford, north of
Boston). I'll be bringing my Icom T81 multi-band handie. I'm wondering
what are some 'active' repeaters in the area that I could drop in on
and say 'hello' to some area fellas, especially interested in some
nets during the evenings. I've got the ARRL repeater guide
but naturally it can't tell me the 'popular' machines.

tnx es 73 to all

For Sale! $150
Radio Shack DX-394 AM-USB-LSB-CW SHORTWAVE RECEIVER.
It covers the 150 - 30000 Khz range, and thus will receive LF for beacons, the AM broadcast band, all shortwave and all amateur radio bands in that range. AM/CW/SSB capable, it has an LCD frequency readout and LCD signal strength meter. The DX-394 is an excellent choice for your general coverage receiver. Covers the entire HF spectrum! Operates on either 120VAC or 13.8VDC with optional power cord. This DX-394 is in very good condition. Telescoping antenna. Operational condition is excellent.

Click this link to see the radio!
http://www.geocities.com/dbnawell/dx394.htm

I can accept payment via PayPal if you prefer and that will get the radio shipped FAST!

The hysterical attitudes here about Morse code, bordering on religious fervor, have caused me to wonder whether there will be Morse Code in Heaven.

My hypothesis, while not touching on my opinions on what kind of afterlife I'm headed for: There will be Morse Code in heaven, even though that some there would object, but the only people who will hear it are are the ones who will think it is good. The way I see it, that'd be the kindest way to run that particular railroad.

Mackey, your "rubber-glue" mentality is really tiring, and has by now raised the noise floor of these NGs to an unprecedented level. Do you actually have anything useful to offer us, or are you just so mentally ill that this kind of stuff defines your only purpose for living?

If Internet bandwidth were as precious as the amateur radio spectrum bandwidth, you would have been shut down long ago. This behavior is simply not becoming of your (alleged) recognized status in the amateur radio community, and you should be damned well ashamed of your moronic behavior. Do us and yourself a favor by trying to apply yourself in a more constructive way.

Well, Hans, from what I have seen here, there are few who really object to hearing it; they just don't want to have to learn the code in order to be let in. Once in, they have no objection to those that want to use it.

Ah, Reg, you never disappoint me. Theory is always so much tidier when not sullied by those annoying measurements. As long as we never actually measure our S-meters, we can remain steadfast in our certainty of their precision. Exept for American S-meters, of course.

4712. K2 FRACTAL FLYER:** New Antenna ** Link

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-12 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000812142554.18783.00000848@ng-cb1.aol.com>
Source record: 105138

Hi All--

The K2 Fractal Flyer is a new class of monopole, which uses an elevated fractal counterpoise and fractalized sloping 'sloper' section. Low height; high performance; unidirectional!

Especially if you are height restricted, this antenna is very appropriate.

The antenna is covered by pending patents, but radio amateurs are invited to build their own for private, non commercial use, and without sale or manufacture.

Enjoy!

The link is on the ham page of:

http://www.fractenna.com

The CLARC SwapFest'2000 will be held on September 23rd, 2000 at the Webster Civic Center in Webster Tx.
Doors open to the public at 8am. This will be Amateur Radio, Home Electronics etc. There will be vendors, fox hunt, demos, prizes, food and more.
Check out the website www.clarc.org/swapfest.htm
You can sign-up electronically for tables or mail in your request.
Ham and Vendor dealers please contact hamfest@clarc.org for more information.

I found IT?

The battery is a button type in the face of the radio. I used Radio Shack CR2032 Lithium Battery to replace it. I just have to wait to see if retains its memory. A piece broke off when I tried removing the battery, so I had to solder it back on. Then I had to reset the radio using the FUNC and POWER buttons together.

Good Luck guys,

73's

Paul KA1TEL

4716. MFJ-1621 portable antenna - does it work?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-12 00:00:00 UTC
From: wb8nhv@aol.com
Message-ID: <20000812163458.18589.00000832@ng-cn1.aol.com>
Source record: 105142

Greetings.

I recently moved to an apartment, so cannot use any kind of outdoor antenna for HF or VHF (or even one like the Barker & Williamson all-bander that clamps to window sills). Shortly after moving here, however, I purchased an MFJ-1621 54" portable antenna. My question is simply this. How well do these antennas actually work? MFJ claims that amateurs have won all sorts of DX awards with this gutless-wonder antenna, but I cannot, in my wildest dreams or my worst nightmares, imagine that statement being anywhere near true.
I was also told that this particular antenna is very inefficient. Is it, really? I will be feeding this antenna with my 100-watt Icom IC-725 and operating mostly 30, 17, 12 and ten meters. I realize this antenna is no match for the all-band dipole I had at my former QTH; however, will I have anything even approaching good results with the MFJ-1621? My main operating interests are CW on 30 meters and 2m FM. (I have certain problems on the latter band as well, but I have been told that they are most likely being caused by receiver insensitivity at the repeater site, not by my HT as I originally thought.)
I've read and have been told that one can put up just about anything for an antenna on 30 meters, and can work the world with only a few watts output. Is there any truth to this? If this statement is accurate, I would think my IC725 with the MFJ portable antenna will allow me to make some contacts on 30. I have been a ham since 1972 (28 years) and have had an interest in amateur radio since I was eight years old (I'm 44 now), so I realize that a simple, indoor antenna such as the MFJ-1621 cannot match, let alone outperform, a properly-installed dipole or beam.
All I'm looking for is an installation which will enable me to get back into CW hamming on 30 meters (and the other WARC bands, of course), as well as the 10-meter SSB club net of a local radio club of which I am presently a member. CW is my favorite mode, and I certainly don't want to get "rusty" in the receiving department (I can presently copy about 17 wpm "in my head" and a bit less if I have to write it down). I spent far too much time learning the code and getting my speed up to General level to allow myself to forget it.
Please reply either via this newsgroup or via e-mail to wb8nhv@arrl.net.

Thanks a lot and 73.

Jeff Strieble, WB8NHV
Fairport Harbor, Ohio

To me, CW was merely the path to more spectrum, and I didn't need that
additional spectrum enough to take the time at any point during the 20
years I've been a Tech.

> You apparently feel a great sense of
> accomplishment for waiting until the requirements were dumbed down to your

Nope. I'm glad to have the addional spectrum available, when I'm
finally able to take the Extra exam.

I don't base my self-image on my CW ability or clas of license. For me,
the lure of ham radio is to communicate via my chosen method, not by
yours.

This is, no doubt, because of the increase in the number of Extra-class
hams, who have always been responsible for "bad-ham" operation to a
level far beyond their percentage of the ham population.

4722. Re: DTMF and FM Repeaters

Newsgroup: rec.radio.amateur.misc

...And of course, the filtering option may be just that - an option (that's usually enabled). However, some repeaters will pass DTMF, especially if they're controlled from a different frequency.

For the custom software I wrote for my repeaters, I have a programmable option to let pass DTMF (and IGNORE it as a command) if it's on the input with the normal PL tone, but accept it if it's sent without that PL tone (including with a different one) - therefore control functions may require a different PL than that which accesses the repeat function. DCS is also becomming popular for control, too.

I'm in an apartment on the top floor of a garden apartment building with an access hatch
to the roof crawl space. Can't walk up there, but I was able to toss weights with wire
tied to them a good 15 feet or more in a horizontal V pattern. I've worked Australia,
Japan, Argentina from Silicon Valley CA.

If you rig only puts out a few watts like 5 or less then there should be no
problem. If it is no higher than 25 watts you can run it to your fuse box. If
you have a new car with a computer chip you should wire high wattage rigs to
the battery directly and have the antenna at the back of the car. It is also a
good idea to use ferrite loops at the power connector so no RF escapes to the
battery, which can be distributed to the rest of the car.

Actually, this is fairly common on all auction sites (and not just ham sellers do it). Ebay is aware of the problem and has a somewhat limited method to deal with it. But, since the seller can create an account on just about any server, with just about any email address, it is almost impossible to stop.

Your best bet is to bid with caution. Don't bid in large price increments. And practice restraint when a bidding war develops (in other words, know where you want to stop before bidding).

I work in a classified electronics lab for government equipment.
Because of the RF leakage of AM/FM Radios, we are not allowed to
have such equipment in the lab since it is possible to listen in
to comversations using the leakage and the speaker acts as
a microphone. It can be done!

Dear Roy, I have no objections whatever to the RST system.
It works very nicely when you don't have an S-meter as it
was in the 1920's perhaps into the 1950's

But when there's an S-meter reading with a number attached
it MUST be associated with a particular signal level at the
input to the receiver. There is no way of averting the
situation brought about by using the plate current
milliameter as a signal strength meter when receiving.

Roy, there's no need to toss your receiver into the garbage
bin just because your ancient receiver S-meter is a little
bit (10 db) out of calibration. If it works, its doing a
good job. Whatever you do don't try to fix it !

Believe me, I'm with you americans all the way.

Regards from Reg, G4FGQ

I think that we can agree that you don't want to bother to look it up.

I remember a definition being 6db per S unit and mentioned in text in
either the ARRL handbook, or one of the Gordon West study guides, it was
probably even in the question pools. There's some sources, have fun!

I'm sure that the EIA or IEEE have no interest in defining a formal
standard for this. But, we're talking about ham equipment, not
commercial stuff. In that light, in my 1974 and 1986 editions of the
ARRL Radio Amateurs Handbook, it was mentioned that some equipment
makers attempted (but failed) to promulgate a standard of 50
microvolts for S9 and 6 dB per S unit. Curiously, the 2000 edition
makes no mention of this. They all have a textual definition of the S
units, i.e., extremely strong, strong, moderately strong, etc. I
wonder what standard is used by contest and DX stations that hand out
"59" or 5nn to everyone?

I recall having checked the S-meter calibration of receiver (75A4)
using professional and calibrated equipment and it wasn't too far off
of this "standard."

Nope - cant do it. From what I have witnessed on this freq-about 25-30% ham stuff and rest misc. I will hang out here. If the MFWICs let the AMP crap get thru, then reacon I will be true to the cause and hang in here. If I respond to non ham inputs and get silenced for it-then, it shows the hipocracy of the entire shooting match.

4738. Hamming from an apartment - next to impossible?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-12 00:00:00 UTC
From: wb8nhv@aol.com
Message-ID: <20000811233211.22052.00000550@ng-ci1.aol.com>
Source record: 105266

Greetings.

My last post was in reference to problems which are keeping me off my favorite amateur bands and modes (30, 17, 12 meters SSB and CW and 2 meters FM). The biggest problem is I cannot put up an outside antenna for HF or 2 meters, because I live in an apartment building. How do I get around this? I certainly don't want to give up the hobby; after 28 years it means too much to me.

Frankly, I did not go to the trouble of having my license modified for my new address (and believe me, it was a lot of trouble, since FCC's ULS is almost impossible to use) just to have it sit in a drawer unused. I want to get back on the air on CW and FM in the worst way, but as I said, I cannot erect outside antennas and am not in a position to build any kind of antenna (I left all my tools, and a rather large basement workshop area, back at my former QTH near Cleveland, which I couldn't go back to now if I wanted to--the house was sold about nine months ago).

I'd like to get back into ham radio because I enjoy it--always have, since I was first licensed as a Novice (WN8NHV) at 16 years of age in 1972. I live in a very small town where there isn't much to do at night, and I don't drive so I can't set up a mobile station or get away from my town to see other parts of northeastern Ohio. If I could set up my amateur station again, I would at least be able to work 30 meters (one of my favorite CW bands) and check in to a 10-meter SSB club net of a local radio club of which I am a member.

I did not mean to imply, as the gentleman who answered my last post (Gary Danaher, AB5RM) seems to think, that I expected to hit any repeater 35 miles away with an HT and a rubber duckie antenna; after 28 years in ham radio I know this is impossible under those circumstances. However, I wish I could get into the local repeater, which is about three miles away, with a decent signal. My antenna problems have literally forced me off the HF bands (my entire HF station remains packed in two boxes which are stacked, one atop the other, against a rear wall in my apartment), so I am hoping I can at least use the club repeater my dues are helping to support.

One other reason I want to get back into CW hamming is that this is my favorite mode. I spent far too much time learning the code, then getting my speed up to 17 words per minute to get my General ticket, to simply drop it and forget about it just because I live in an apartment. I miss working the world on 30 and 17 meter CW (as I did, every night, when I lived in the city), not to mention checking into CW traffic nets. Am I in a situation where the only CW I will ever hear from now on is the identifier on the local 2m repeater?

Thanks for reading this, 73, and best of luck.

Jeff, WB8NHV (wb8nhv@aol.com)

Jeff,
I did some hamming out of an apartment building with lots of people using rabbit ear TV antennas and the like about ten years ago. I used a small MFJ tuner feeding a 3 foot piece of ladder line snugged under a metal screen window. Attached to this I ran two somewhat equal random lengths of #28 magnet wire over the parking lot to the garage roof in sort of a v-beam pattern. The #28 wire is invisible unless you get real close to it. The wire was never more than 15 feet off the ground. Ground was to the ground screw on the wall outlet. I was able to work 100 watts CW and SSB on 40 thru 10 meters with excellent results. In my case, the secret to not causing TVI or RFI was a "balanced antenna" rather than a random wire.

Good luck and 73, Joe, W1GFH/6

Got a back porch or a balcony ? My FT-100 and the ATAS 100 antenna with a homebrew mount for hotel balcony railings does a great job from 40 meters to 70 cm. when I travel. Perhaps some type of screwdriver antenna and a temporary mount could work for you ?

Good luck and 73 de W6DKN

Likewise, I have an Alinco DR-599 whose battery has died.
Ideas on where it's located (either the head or the body...) before
I rip into this thing?

Yes, that's the story I read in the Handbooks, that one or two manufacturers tried to adopt a standard but it failed to catch on.

I think that was around the 1940's.

4748. DTMF and FM Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-12 00:00:00 UTC
From: Chuck Wyatt <cwyatt@webmail.solidworks.com>
Message-ID: <8n3gvh$p0v$1@bob.news.rcn.net>
Source record: 105276

I recently acquired a pair of DTMF enabled HT's so that my wife and I could keep up around town (ala' cell phone, but cheaper of course). I notice that I can pretty easily run the DTMF and open squelch on simplex, but it doesn't seem to work thru a repeater. Even with delay programmed in (the tones can be programmed to kick on 1000 ms after PTT) -- do many repeater operators somehow DTMF disable their machines?

thanks!

4749. Re: Hamming from an apartment - next to impossible?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-12 00:00:00 UTC
From: "Scott D. Hernalsteen" <w8cqd@arrl.net>
Message-ID: <39954B02.9353F4C0@arrl.net>
Source record: 105277

I ham from my apartment regularly. I have done SSB, RTTY, PSK31, VHF Packet and FM.

I use and older B&W Apartment antenna with reasonable success. This antenna clamps to the balcony or can attach to a window frame and uses loading coils and a counterpoise wire(which is adjusted per band). I am also not allowed to have things on the balcony, but the temporary setup hasn't netted me any complaints from management. I don't have problems with RFI and have worked as far away as Germany(on RTTY) with this HF setup. My VHF work was done with a 1/2 wave mag mount stuck to a round pizza pan inside the apartment.

I haven't found a really good, affordable solution for me, but anything that puts a signal on the air is better than nothing!

Good luck!

Go to a metal shop and have them cut a 2" angle iron the the width of the window you wish to use. Drill 4 hole in one side to attach to the window sill where the window mates with the sill. In the upright drill the correct size hole for bulkhead (passthru) connectors of the type you are using (PL-259, N, Bnc, ect.). When the window is closed on the edge of the angle iron, drill a hole at the top edge of the window to allow a bolt type lock to be installed on top of the window, so the window can be secured.

```

Dear Roy,

I have not the slightest wish to be thought offensive, but the calibration of your particular ancient S-meter, of my particular modern S-meter, or of anyone else's particular S-meter, has nothing to do with acceptance/adoption of some form of standard when aligning/checking amateur radio receivers at the end of a production line.

It is VITAL the test engineer (or pretty girl?) be told the signal generator settings when twiddling the preset gain controls. Otherwise nothing would ever get out of the factory gates.

For many years the the defacto standard adopted by international manufacturers (certainly the Japanese but probably preceded by US citizens) has been :-

(1) With no signal input twiddle something to set up S-meter zero.

(2) With 100 microvolts open circuit from a 50-ohm signal generator at 7 MHz, twiddle the second preset gain control for a reading of S9 on the S-meter.

(3) Set the signal generator to 10 millivolts and twiddle the third preset for a meter reading of S9+40 dB.

(4) Go back and forth between (1), (2) and (3) till the interaction disappears.

From the internationally adopted DEFACTO S-meter scale graduations this corresponds to 1 S-unit = 6dB, which fits very nicely into the age before S-meters were fashionable, and when an S9 report simply meant "Very Loud" and S-zero meant "Have you gone QRT ?".

S9, at 1/2 full scale meter deflection, corresponds logarithmically (dB-wise) to half way between the first-mixer, 50-ohm, 3 kHz bandwidth noise level and the receiver signal input (at 50-ohm)level at which the intermod products begin to be excessive and difficult to control.

So there are sound engineering reasons, not just historical and traditional, for the defacto standard of 50 microvolts into 50 ohms and 6dB per S-unit. And a 2-to-1 voltage ratio

is very convenient for mental arithmetic.

Forgive me for the repetition - how your or my particular S-meter behaves has nothing whatsoever to do with it. And in the whole of my 60 years of experience of designing, manufacturing and using communications measuring equipment I have never been surprised at any measurement results made by myself. And on the downside - not by anybody else. I invariably expect the worst. Delusions of accuracy is the most common ailment in this world of engineering.

> either the ARRL handbook,

From 1986 ARRL Handbook

"An attempt was made by at least one receiver manufacturer in the early 1940's to establish some significant numbers for S meters. S9 was to be equivalent to 50 uV, and each S unit would have been equal to 6 dB. The scale readings above S9 were given in dB. The system never took hold in the manufacturing world, probably for the reasons given earlier."

(The reasons given earlier are manifold and include varying gain distribution within a
receiver from band to band. and the fact that S meters are relative reading instruments.)
Let's face it -- there is no real standard, and the S meter serves only the eye of the
beholder. This argument has been rehashed over and over again and remains in the
same category as the discussion as to whether horizontal or vertical antennas are better.

Most repeaters in my area have filtering to remove DTMF freq. as well as PL tones. This is for safety so some low life can't decode you phone # on autopatch, and know there is no one at home.

I was told while purchasing my first 2m mobile rig that there was nothing wrong with powering it via the cigarette lighter adaptor. I have always been under the impression that the only valid configuration was direct-to-battery. Are there any reasons why the former method would be unsafe or undesirable. Thanks in advance.

Be careful when you bid on Ebay.Watch out for some of the ham auctioners.When I bidded on an item and was outbided and lost the auction to a "UNKNOWN" bidder.And come to find out the bidder was a fake! Or was a false account made up by either the person auctioning the item or one of his/or hers friends or family members!And not to my suprise the same item showed up on the auction less than 2 days after the item was to have been sold By the same seller!And when confronted with this they reply that they just wanted to get the auction going...Well to me that sounds like rigging an auction.....So I guess ther little false bidder scheme did not work after all.....73,

Think what you want to think old salt. I have been monitoring freaks (sic) for about 59 years. 21+ years for the outfit near Ft Meade. as I mentioned in another post, the politics are temporary. Has every bit of business in the Misc category of Rec Radio Amateur Misc. That is what the ops are bantering about on the amateur airways. I have no interest in verbal jousting with non-hams about politics. I have been reading this forum for about a year. There has been an abundance of misc topics presented here. Many have astounded me, and some have opened my eyes and changed my way of thinking. I enjoy the various postings. Would certainly be a very dull place to hang out IF only directed circuit wiring, antenna flatulence, power supply trouble shooting, propagation predicting were the topics. So, old salt, I will humbly remain in the association of the assorted and sundry flatulent orators.

That was a good indication that what they were offering was really junk. Good equipment need not have false bids to get a reasonable auction price.....

I suspect you already know the answer to this one! As an article in a recent QST documented, everything works some, even lightbulbs. You have heard stories of people testing into a dummy load only to hear a ststion call them back, right? So, you just bought a crummy dummy load with poor shielding- but I bet you will make some contacts.

FCC authority over hams is not absolute.

While the Commission can reasonably regulate under Part 97, it is not empowered to run roughshod over the First Amendment. When a QSO appears on its face in keeping with customary standards of etiquette, declaring it forbidden because of the regulator's personal opinion is specious.

Moreover, assuming authority akin to Ham Radio Czar violates law. No one person can whimsically proclaim free speech violative of Part 97 absent strong settled evidence. Surely, hearsay alone was never contemplated as giving rise to a cause of action. Please see AF2Y's post in this NG as a more eloquent expression of this subject-matter.

Obviously you're the kind of knucklehead whom we do not want on the flamefest. You'd add nothing to it but negativism providing of course you know what that means.

Of course Doc would never be offensive. He goes well out of his way to be friendly with all he meets. Right, Doc?
Oh, by the way, Doc. I have long wondered why you, a dentist, refer to yourself as "Doc"? Real doctors with MD's can be called "Doc", but a tooth puller with pliers just does not cut it. Dentists are severely limited in what meds they can administer and their schooling is much less that that of real doctors.
Maybe you have been snorting too much Nitrous Oxide....

I suppose it takes all types to make up America-even ignorant low class trash like you. Tell me, is your lack of education voluntary or were you checked out of school for gross aptitudinal incompetence?

My education at NYU College of Dentistry came about by achieving very high grades for four years in undergraduate school. That means in college, fool. My GPA was 3.6
In order to be accepted to dental school, I had to pass what's known as dental aptitude tests which were the most rigorous tests in all subjects possible. You ever pass a test, fool, except a urine?

The first two years of dental school are HARDER than medical school because the same courses demanded of the med students are demanded of the dental students and THEN SOME. We had to take extra courses in things like dental anatomy and morphology, embyology and basic verterbrate dentition.

Aside from those, in the first two years we had gross anatomy dissection for 7 months, dissection of head and neck for 2 months, year courses in microbiology, pathology, physiology, biochemistry, histology, blood chemistry, oral medicine, roentgenology, orthodontics, and much more but why elaborate because by now you're probabaly completely lost. If not, here's more:

After the first two years, a dental student is asked if he intends to remain in dentistry since it's a specialty of medicine or would like to switch over into regular medical school. This is based on GRADES ACHIEVED and I remained in dentistry because the life of a physician isn't his own.

Years three and four in dental school are nightmarish because you are then assigned to work in the clinics for two years. On top of this we have to master fine arts courses in the art of dentistry such as prosthetics, crown and bridge, pedodontics, periodontics, surgery, standard operative procedures, biopsies and Lord knows much more. After graduation I had an externship in oral surgery plus post grad prosthetics.

And to think an idiot like you sits on a computer and denegrates a marvelous specialty like dentistry is bewildering.
All it does is to show your complete ignorance for which I grade you 100.

Incidentally I took my ham radio tests before FCC examiners in New York City. There was no fudging, money under the table or begging. I did it their way-tough and honest. I earned an Extra. Now tell the board about where you stand in ham radio and what you do for a living. I'm sure we all are in need of a good laugh.

Doc,AF2Y

Tuned down around 3853 last nite. Insomnia. Was hoping to catch that old
drunk rom Conroe Tx flappin his gums and drinkin from the ole-brown-bottle.
Got a pity-party instead - some other guy in 5-land whining like a old
maid how James can't do no wrong and folks from other freqs are
jammin and playin music24 hrs a day. (didn't her a thing) Guess he never
heard
james launch into an all-nighter of blue language that would knock
over a mule and make Big-Al's past tirades look like an english garden
tea party... Oh well, on to more radio amusment, spin the VFO!
I tune up to 3950 around 2 AM an some 4-lander is moanin about
"someone from Gettysburg Pa" makin problems for him or other what not.
Switched it off, phoey! Watched E! Network instead - cute gals in
dental-floss
bikinis gyrating on a beach - this is more like it!! Gotta sell that stupid
ham gear. Nothin but a pack of cheap old white men whining, bitchin and
complanin
like old washer-women leanin on a backyard fence, complete with the pink
curlers
in their hair and varicose legs showin. Yup. Think I'll sell the Yaesu and
buy me
one of those new 19" satellite dishes what get all the Triple-X TeeVee
channels.
This ham-radio stuff is for commensurate loosers.

what is a good source of permanent mount (not magnetic) auto antennas... I drive a F-150 pickup and have a few magnetic antennas on the roof.... I'd like to get three or four permanent antennas...
one antenna for CB, one for 2M/440, one for low band and one for high band (for the scanners)

One person remarked that my truck is amobile communications center with all the radio equipment I have
three Scanners, CB, and soon 2M/440 also.

I am in either the Phoenix Az or Glendale Ca areas

Thanks for the reply. It will actually be 10 watts at about 4 amps. The adaptor has an 8 amp fuse in it which the dealer fitted to the rigs power lines which also contain a 15 amp fuse. I'm still leaning toward going directly to the battery.

Hi all - I just took the test yesterday (passed both Tech and General written), and I'm trying to decide on a transciever. I'm leaning more towards a VHF handheld, or maybe a mobile - I don't have the space right now to set up any sort of antenna. I'd also like to start learning Morse, and I noticed that little .1 MHz allocation for it on the 2-meter band - does anyone ever use morse there, or is the majority of it on HF? Is it practical to try to use CW through a low power station like a handheld/mobile, and if so, what's a good rig to use?

Thanks!!

4799. Alternator noise cure????

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-13 00:00:00 UTC
From: VE3TMT <mdonoghue3@home.com>
Message-ID: <ScFI5.124194$7I1.2480291@news1.rdc2.on.home.com>
Source record: 105197

Hi all,

I'm experiencing alternator noise on my DX70TH. The noise blanker does remove it, but also adds a lot of distortion to the received signals. I would prefer to not use it and attack the noise at the source. On HF, I don't hear the noise at all when the antenna isn't connected. On 6m I get S5-S7 noise running a Larsen on the trunk lip. The HF antenna itself sits on a frame hitch on the rear of the vehicle as far away from the alternator as can be. This leads me to believe the noise is being radiated. What are my best options as to rid myself of this problem. The first thing I am going to do is run the negative return wire right to the battery post. Currently it is attached to a rear seat bolt. Also I read running a ground braid from the hood to the firewall might help. I was considering purchasing an in-line filter from Powerwerx, but I want to make sure I am going after the right source.

Thanks in advance.
Please reply direct to my e-mail mdonoghue3@home.com

First off, congratulations and welcome to Amateur Radio.

I won't recommend any particular radio. There all basically good. A handheld vs a mobile. Mobile wins hands down. More power, more versatile, but you need a ps for the house.

As for .1mhz on 2meter for CW. Only the DX hounds and other types hang out there. Not a lot of cw on 2 meters.

Id recommend a course with a tape on the cw. Easier. Then pick up a older HF rig, listen around a bit. Keep playing with the tape. Go test, then join real ham radio on HF.

That slice of 2m is used by CW'ers who are using EME (bouncing signals off the moon). There may be some direct contacts too.

Well I found one reference to the S-meter reading in the General
question pool. It's on question G4B11 which reads:
"By how many times must the power output of a transmitter be increased
to raise the S-meter reading on a nearby receiver from S8 to S9?"

The answer is "Approximately 4 times". The reason is of course that a 4
times increase in power is a 6 db change. The formula being: 10 log
(new power / old power).

The meter on my Yaesu FT-840 also works as expected. If I'm having a QSO
with a station that QRP's or QRO's the S-meter reading changes in
accordance with what I would expect based on the above formula. This
stuff isn't magic, it all works for very good scientific, physical, and
mathematical reasons.
If someone else's meter doesn't behave the way it should that meter's
fault not the standard's fault.
It's like arguing with someone with a broken calculator that insists
that 2.361 + 1.639 = 5.

I just bought a nice Comet dual band 144/440 antenna and mounted it on my Ford Bronco. It is not much longer than my Ford radio antenna, so it goes in and out of the garage OK. used a Larsen mount that screws into the top of the fender between the edge of the fender and the edge of the hood. Mount is pretty unobtrusive and out of line of vision pretty much. This is a great antenna. I can e-mail additional information and a picture if you want. 73

> 1. How important is a ground? Most people say that grounding is all-
> important, but I have had a few people tell me that grounds aren't
> necessary.

Grounds fulfill three distinct functions. The best ground for one function isn't necessarily the best for another. The three are:

a. Safety ground. This protects you from a shock hazard if one of the mains or high voltage power supply wires contacts the chassis due to some kind of fault. The requirements for this ground are spelled out in your state's electrical code. I believe that most states adopt the National Electrical Code (NEC). The safety ground conductor in your wall sockets should be connected to ground according to this code, and your rig's chassis should be connected to the safety ground.

b. Lightning ground. The requirements for a ground for lightning protection are much more stringent than for a safety ground. The topic has been discussed in this group many times, and there are numerous resources available for learning how to make a ground system for lightning protection.

c. RF ground. This is required only for certain types of antennas -- ones which require current flow to ground to complete the antenna circuit. An example is a quarter-wave vertical. One wire of the feedline connects to the base of the antenna, and the other connects to ground. The connection to ground has to have a low RF resistance, or you'll expend too much of your power heating the ground. A few radial wires will provide a moderately low loss connection. A ground rod will help a little, but the RF resistance will be high, resulting in quite a bit of loss. Chapter 8 of the ARRL Antenna Book shows the approximate trade between resistance and number of radials. If your antenna is much shorter than 1/4 wavelength, you'll need many, many radials to get reasonable efficiency. If it's longer, you can get by with fewer. A 1/2 wavelength base-fed vertical needs only a very modest ground, and a ground rod is adequate. The requirements for various other end-fed antennas depends on their length. If you use a "complete" antenna like a

dipole or a ground plane (that is, one that doesn't require your feedline to connect to ground), you don't need an RF ground, as long as you keep common-mode currents off your feedline. A "current" or "choke" balun is most commonly used for this.

> 2. What are the ground/counterpoise alternatives to driving an 8-foot
> metal pole into the ground? I live in an apartment, and I highly doubt
> I can do this.

Shallow-buried radial wires are the best. Connection to other conductors just under the surface, like a metal water pipe, is next. These are for the RF ground described in c.

> 3. I have heard that balanced antennas don't require grounds. How do
> I get a balanced antenna?

See ground type c, above.

> 4. How do mobile HF operators get RF grounds? For obvious reasons,
> the 8-foot buried pole won't work.

In a typical HF setup, the car is capacitively coupled to the ground, so the antenna is something sort of like a cross between a lopsided vertical dipole (with the whip being one side and the car the other) and a vertical with elevated radial system.

I think Dwight might be referring to problems caused by the poor
bypassing and lead routing that is common today in radios.

One example is in the key jack. My IC-751A doesn't ground the keyjack
at the chassis, instead the ground lead and everything bypassed has to
follow a path all the way to the circuit board where the keyer chip
is.

Audio systems do the same, although in some radiaos they wisely have
the RF bypasses grounded through a less lengthy path.

Grounding the case of the radio can help eliminate common mode
excitation causing the accessories connected to the radio from feeding
RF into the non-grounded jacks, like audio and keying input lines.

Why the radios are grounded that way internally, instead of using the
chassis or cabinet entrance points as a common ground point, is beyond
me. It must be because it's easier to insulate a jack and a tiny PC
board on a jack than isolate the signal input on a complex circuit
board, or they've never bother to learn how to work with ground loops
properly.

It amazes me they even pull that nonsense with a dc control signal
that has a two or three volt threshold, like the keying line inputs.
On my test radios that are subjected to high RF fields, I rewired
everything and grounded all the shields and jacks at the inputs where
the leads first enter the radio.

Jason - Thank you for a well thought out and reasoned treatise concerning possible ills of our beloved Amateur Radio. There are many barriers to ham radio, the license, equipment, antennas, etc.. When bitten by the bug one has to overcome and prioritize. Being outside the "traditional" main group requires a degree of stick-to-it-aness that most people do not have (hence the desire to follow the path of least resistance!). When was the last time you spoke with a youngster over the air? For me, it was last Field Day. There are some YLs now and again, but they seem not to venture beyond the safety of service nets or CW. They seem to congregate in small groups of similar interests. When was the last time you heard a YL (or xYL) call CG? You well articulated the reason our hobby is dying. The over the hill gang will soon be the "Well Over the Hill" group. Then they will die off - leaving only a few to watch over our collective resources. Contributions or suggestions? I have none because I am part of the problem. Perhaps I subconsciously want fewer people on the air because it gives me more space. I don't know Jason - but thanks for starting the discussion.

> avoid.
>

Some neighbors can not be placated. But you can try. First thing to
remember is most of the RFI will NOT be because of your equipment.
Unless your running antique junk.

Most, if not all, of your RFI will be with the cheap junk trashy
telephones. Not a lot you can do there, stick a filter on them and
hope. However phones are not radios and are not supposed to pick up
radios. If they do, they are operating incorrectly. It is up the the
customer to contact the manufacturer. That is what the FCC says.

Another growing source of trouble is the proliferation of home
computers. The speakers are total crap. I had a neighbor that heard
me loud and clear above 20 meters. I tried everything. NOTHING FIXED
IT. I ended up giving my speakers to him (no problems) and I've got
his. Be inventive.. hi.

TVI is a whole different animal. One set gets blown away. Another
doesn't. Ive got a 32inch RCA that I blow away on 15 and 10. I stick
my cheap Sylvania portable on the same satellite and cable feed and NO
RFI at all. I've got a older RCA in the bedroom, NO RFI. Go figure.

> away) should be OK. Right?

That is generally a good assumption.

> 2. Using low pass filters, a decent ground/counterpoise/balance
> system, and so on.

Yes indeed.

> 3. Limiting my power output to 10-50 W.

I'd say 50 watts will do on cw. Not too good for ssb. Run the rig at normal barefoot level. Some radios actually put out more crap when you reduce the power. Remember if you run 100 watts and reduce it to 50, thats half power. But you will only drop 3 db. Not much to worry about.

> 4. Keeping a comprehensive log of my transmissions (time, date,
> frequency, power level, etc.).

Do that anyway. There are lots of nitwits out there and you may need to show the FCC this log.

> 5. Offering to prove that I am not causing interference. The
neighbor

I would'nt advertise that your on the air. If someone asks, be cooperative. Other than that keep your own house clean and enjoy.

Move out.....seriously tho....you got a problem there. And yes a wire
antenna would work out well. The trick will be to hide it. I don't
know what you mean by "unreachable area".

Also can you run a whip on your car and drop a feedline to it? Just a
thought.

With what your saying I guess you will have to stick something out the
window in the middle of the night.

Is there anyway you could get access to the roof?

>populations have very few hams of Native American descent.

The hobby is often propagated by elmers. Kids don't know how to ask
for this stuff in most cases.

Even as late as the '60s and early '70s minorities were often
discouraged from technical pursuits such as ham radio. With no elmers
in the community, how would someone have gotten started?

>This is ironic given how egalitarian an environment ham radio is.
>Something doesn't add up.

No, it adds up quite well. Once upon a time, before the word
"computer" was used in the same sentence as the word "hobby," ham
radio was about as high tech as you could get. Kids were attracted to
the hobby in droves. Radio was high tech, it was accessible, and
there were folks to help you out --if you were white.

Yes, I knew a few minorities in the hobby, but they were relatively
few in number. Most of them were either from the military or were
helped by those who were in the military.

The issue was also financial. Although economic barriers were being
removed, minorities were still busy spending their money on more
important things, such as education.

>I don't have any clear answers, but I believe that the conspicuous
>absence of Noncaucasians is simply a reflection of the rest of American

>society. It's no secret that society has discouraged women, African
>Americans, Latinos, and Native Americans from technical activities and

>society that ham radio is an "old boys club".

Similar perceptions are found in aviation. Aviation is also dominated
by white, middle aged men. Yet the exams themselves are as
even-handed, fair, and performance based as possible. The "old boys
club" perception persists. It takes a helping hand. In many cases,
that helping hand isn't readily available in the community. And when
people learn these things and better themselves, they're almost always
financially successful in other ways such that they often leave the
old community.

>On the one hand, ham radio has a problem. On the other hand, it also
>has a great opportunity.
>
>Any thoughts?

It's called an outreach effort. I think local radio clubs should make
the effort. But it takes dedication and time. And no matter how
noble the cause, these things are always in short supply.

Dwight and W1QH have valid points. And the one about "DRUGS" is also
very pertinant.

My opinion is that Amateur Radio as we presently know it must change if
it is to survive. And there is no guarantee we will change. We are in
the fight of our collective radio lives, and most people don't know it.
Or they don't care.

We are at the end of the original Amateur Radio era, and the beginning
of the new era. We will see CW go the way of the DODO Bird. As we
will with SSB. These modes will be replaced by spread spectrum

technologies and our "bands" will no longer exist. We will receive licenses, but with the ss technology there will be no need for frequency band assignments per se.

We will see the advent of Earth to Space communications with the new space station. We will see ham stations on other worlds. All of this tightly intertwined with computers.

Most of us "old farts" will not see it. Remember us fondly and carry the torch proudly....Now I'm off the play on CW.

You are...what is probably happening is the car body is radiating the
alternator whine. Usually good grounding of various part of the
vehicle to each other and using both hot and negative straight to the
battery will help. Some folks even use heavy coax for this.

Also put a filter on the alternator. This is a heavy inductor with the
wire wound on it and a capacitor or two. A basic pi-net if you will.

Thanks to all for the wonderful publicity. Many FB interviews even with Rueters, RAI, and other international press reps. I was clearly visable for about 30 seconds while the VI delegation voted. I was the only person without the benefit of a permanent suntan. Very hard to miss me if you were watching Wednesday night. If you have any additional doubts merely ask the RNC for a copy of the Roll Call of Delegates and you will clearly see me listed from the Virgin Islands.

The people of Philly were wonderful and this convention was magnificant. Our hotel was in New Jersey but the conections across the Walt Whitman bridge were very convenient.

--
The FCC states that KV4FZ "lacks the requisite character to have his ham license renewed".
So they are banishing him from the ham bands forever. Yet the FCC has

renewed the ham
licenses of murders, rapists, drug dealers and pedofiles. No problem at
all. Ham exams are
administered to individuals in prisons across the country. Even super
hacker Kevin Mitnick retained his ham license
without a whimper from the FCC. What is so special about KV4FZ that it
required Bill Clinton to order FCC Chairman Reed Hundt to whack him?

>> >
>> > Now it all makes sense: The NRA is run by a drunk.

...and there's a good chance the director of M.A.D.D is one or is married to a gun owner. What the Hell does having a drinking problem have to do with running (although I believe it's more of a figurehead and honorary position as opposed to the actual daily running of the NRA) an organization or even a privately owned company for that matter? The policy and direction of the NRA is not in the hands of one doddering old man who might have begun to think he actually is Moses. It's in the hands of a board and it's active membership. I hope Mr. Heston lives for many more years. I'm happy for him that he recognized his drinking problem before it took him. We don't want his hands cold and dead yet.

Already did in a previous message. It's on the General licence exam
question pool. If you have issues with that you'll need to contact the
chaps that prepare the licence exams.

I'm sure it wouldn't take you too long to find aout more information on
your own as well.

4834. ! Science of cambridge MK14

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: David <david.oharrow@btinternet.com>
Message-ID: <8n9lt5$9m4$3@plutonium.btinternet.com>
Source record: 105108

Hi,

I am trying to locate a Science of cambridge (Later to become sinclair) Mk14 computer. The computer was available in a home built kit in the UK and, from what i am led to believe, many were sold to amateur radio enthusiast, as, at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this group)

If you have one, or any spares, or indeed any sinclair items ie radios, calculators, watches, etc, working or otherwise, that you would like to sell please email me as i cannot regularly access newsgroups.

I would also possibly be interested in early home computers from the late 1970 to the late 1980s. Preferably boxed but all will be considered.

Thank you in advance.

david.oharrow@btinternet.com

Herbie,
I believe you were there. I believe you were there. The white guy! Yeah, a lot of guys saw you and Ruth Hoffman did too. She sent me an E-mail about it. I don't have to consult any RNC for a roll call. You made your point. Now I just hope your man loses in November.
About your problems with the FCC, I have my own. You're a devil who got hurt and I'm an angel who got it too. Riley sent me a letter saying that I was jamming Polly and MXL which happened to such a degree that when MXL was questioned about it on the air, he admitted I wasn't there at the time. Let's hope that either Gore or Bush fires Hollingsworth or his bosses. Riley's a good lawyer but a lousy cop.
Herbie I stopped picking on you about your ham problems a long time ago and whether or not you deserved all the crap you've gotten is now speculative to me.One time I thought you did but now....?
Personally speaking I think when you stopped annoying Intercon and picking on the Jews, you should have been awarded a blue ribbon and left alone or maybe a citation from Israel. You saw the light..you saw the light. I'm not going to tell you to gay cockin' any more.
Doc,AF2Y

I hope Monika appreciated your dancing with a gorgeous Latina delegate. If not, what did you tell her upon returning. You were trying to garner the Hispanic vote for Bush the tush?

4843. Form To Use For Club License Application???

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <dfugps4v66vr066obl8aa8b6tr81gvdsmn@4ax.com>
Source record: 105117

Well, once again the ARRL website has proven to be about as useful as breasts on a bull. Lots of hype about why clubs should be ARRL affiliates, but damned little about forming one, especially information about the form and information required. Their search engine couldn't find it's butt in a phone booth with both hands.

The NCVEC quick-form 605 has spaces for Amateur Club application, but no information as to what the FCC/ARRL wants for Name and Address. The trustee? The club itself? The sponsoring institution (this is a school club)? The dean of the college?

Who signs? Where? And what boxes to check? This certainly isn't an examination, a change, or a renewal -- and those are the only options.

Now if you go to the FCC site, they have you do another rather antiquated form that they say is in update. Which means by the time I get the damned thing filled out and back there, it will come back as being out of date.

Anybody help me with the 605? Or a better idea?

Jim
Jim Weir, VP Eng. RST Eng. WX6RST
A&P, CFI, and other good alphabet soup

4853. Anyone got any spare blank mil/commercial message forms?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: Boatanchor Bob NA4G <na4g@weedcon3.cropsci.ncsu.edu>

Any of the old timers around have any blank message forms from some
of the old military or commercial circuits? I was wanting to collect
up several, before they all disappear. At one time there was an RCA
blank on a web page, but I can't seem to locate that. Anything that
anyone might have a pointer thereto, or a spare lying about, do holler.

Thanks

Bob/NA4G

I can show you countless textbooks and references that describe how a
calculator should process 2.361 + 1.639.

Can you name a textbook, or reference book, that says 6 dB is an S
unit? Can you explain why the scale is marked wrong on Collins
receivers, or Drake receivers... making them absolutely impossible to
calibrate?

Thanks.

Date: 2000-08-14 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8n7jd5$g6$1@nnrp1.deja.com>
Source record: 105213

I would like to hear some stories on how you or others placated angry neighbors who accused you of interfering with their TVs and other appliances. I would also like to hear some stories on situations that weren't satisfactorily resolved simply so I can see what I need to avoid.

I am a newly minted General licensee still shopping for HF equipment. I'm overwhelmed with information on various issues.

Some of the things I plan to do include:
1. Testing my own TV, VCR, telephone, and other appliances at various distances from the antenna and at various power levels. If I can avoid interfering with my own gadgets, the neighbors' equipment (further away) should be OK. Right?
2. Using low pass filters, a decent ground/counterpoise/balance system, and so on.
3. Limiting my power output to 10-50 W.
4. Keeping a comprehensive log of my transmissions (time, date, frequency, power level, etc.).
5. Offering to prove that I am not causing interference. The neighbor will find a witness to watch me transmit while I find a witness to observe the supposedly affected appliance. If I can prove that I am not the culprit or find a solution (lower power, etc.) that will avoid causing interference, this would calm down my neighbor. Right?

Did anyone take the above steps but fail to placate the neighbors?

4859. HELP: RF grounding advice needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8n7jqsje1@nnrp1.deja.com>
Source record: 105214
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

I am a newly minted, no-HF-experience General bewildered by various issues of setting up an HF shack. I'm trying to gain as much knowledge as I can before I buy the rest of my equipment.

My grounding questions:
1. How important is a ground? Most people say that grounding is all-important, but I have had a few people tell me that grounds aren't necessary.
2. What are the ground/counterpoise alternatives to driving an 8-foot metal pole into the ground? I live in an apartment, and I highly doubt I can do this.
3. I have heard that balanced antennas don't require grounds. How do I get a balanced antenna?
4. How do mobile HF operators get RF grounds? For obvious reasons, the 8-foot buried pole won't work.

4861. HELP! No stealth antenna?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8n7kcsvm1@nnrp1.deja.com>
Source record: 105216
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

I live on the ground floor. Outside my apartment lies a 10-20 foot stretch of grassy open space where anyone can walk by (well, at least it faces away from the parking lot and towards an unreachable area of steeply downsloping woods). Between my apartment and the unreachable area, there are NO bushes, shrubs, railings, trees, or other large objects I can use to conceal wires or other objects. I'm sure that even a well-camouflaged wire would be discovered sooner or later. At least someone on a higher floor can better conceal things.

Can I still operate HF stealth with an outdoor antenna? Could a wire antenna work?

Or would I be better off using a mobile antenna (like a Bugcatcher) outside and bringing it inside when I am not operating? Since I only plan to operate a few hours per week, few people would notice.

John, be careful if you mount the antenna on the roof.

I mounted a Diamond dual bander (770NMO) to a NMO mount on the roof of my '97 F150. it is fine for highway but in the city beware of low hanging trees. I noticed one day my antenna was crooked so I took off the antenna and noticed the sheet metal was bowed up. Like if you took a screwdriver to a can of corn!
I took it to a friend of mine who is a installer of two way radios and he fixed the problem by bending it back CAREFULLY
he also told me it was my mount that did the damage.
So I got a larson MNO mount with a large base to cover the mount with more surface area, there fore more resilient to low hanging branches.
Now if the home owners trim their branches or there are no trees around by all means drill the hole but make sure they are at least a wavelength apart from each other to avoid problems with desence and the like

but if you have trees I would stay with a mag mount
I would rather buff a couple of scratches and replace a antenna whip than pay to have a hole plugged and repainted. I learned this the hard way.

thanks for your time
hope this helps if not well then sorry!

Source record: 105219

All good ideas except using 10-50 watts. you'll probably find out that you need more than that on HF. At that power level you should have no problems on a resonant antenna. Also make sure your ant. is in good shape, i.e, coax, feedline, connections, swr etc.,. Bottom line is, what you experience in your home, more than likely your neighbors are also. That is not always the case though. watch for long wire runs such as cable tv coming into the house, phone lines, etc. They most often act as an antenna themselves, bringing RF into the equipment. Be SURE that cable tv cable is in good shape. Again at that power level you should have no problem. I'm sure that you'll find the need to increase that as time goes on.
Good Luck, and enjoy the great Hobby. Congrats on the general ticket.

4865. Ham radio demographics

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8n7n4t$2vp$1@nnrp1.deja.com>
Source record: 105220

Here in the United States, most ham radio operators I see at club meetings and hamfests are middle-aged to elderly Caucasian men.

Evidently, ham radio has had difficulty attracting other demographic groups. Much has been discussed about the importance of recruiting younger hams (and I don't want to discount this), but I have heard surprisingly little discussion on why so few women and Noncaucasians enter our hobby. During my 3 1/2 years as a ham, I have only seen an infinitesimal number of Latino and African American hams despite the fact that these racial groups were a much larger percentage of the rest of the population. Even in the Chicago area, I saw surprisingly few Asian American hams despite the fact that many Asian Americans work in technical fields. I suspect that the ham radio clubs in Oklahoma, New Mexico, Arizona, and other states with large Native American populations have very few hams of Native American descent.

This is ironic given how egalitarian an environment ham radio is. Something doesn't add up.

I don't have any clear answers, but I believe that the conspicuous absence of Noncaucasians is simply a reflection of the rest of American society. It's no secret that society has discouraged women, African Americans, Latinos, and Native Americans from technical activities and fields. In addition, I sense a misguided perception on the part of society that ham radio is an "old boys club".

On the one hand, ham radio has a problem. On the other hand, it also has a great opportunity.

Any thoughts?

Thanks for any and all input on my dilemma. I'm going to install (read: DRILL HOLES FOR) multiple NMO mounts in the roof of my Ford Explorer. I have 2 questions.

#1 What is the better material to buy the mount in?

stainless steel, or brass? They are available in both.

#2 What size mount is the best to use 3/4" (install from the top-LARGE HOLE) NMO or 3/8" (bottom install-smaller hole) NMO?
I will be using various VHF & UHF (18"-45") antennas.

Any other "installation tips" are appreciated. Thanks to all who respond.

> majority of it on HF?

Yes and yes. Yes there is some CW on the bottom end of two meters, but by
far the majority of CW is on the HF bands.

To come across CW on the bottom of two with any regularity would be highly
unlikely. There are those who work Earth-Moon-Earth (EME), by bouncing
signals off the moon and there are some who hold meteor scatter schedules as
well as a *few* who actually go down there and operate CW.

Picking the bottom of 75, 40, or 20 would yield many more signals, but a
high percentage of the ones on 20 would be DXers. This part of the sunspot
cycle would probably make 80, or 40 CW the most likely.

As you are going to be listening, a receiver, or tranceiver set up insided
just tied to a wire should hear many signals. No, it's certainly not like
using a big ourdoor antenna but it should suffice. If you transmitt, watch
out for the advanced and extra portions of those bands.

Is it practical to try to use CW through a low
> power station like a handheld/mobile, and if so, what's a good rig to
> use?

Hand held? Probably not, but a mobile with a key jack will do fine.
Many of my friends operate CW mobile, which to me is more dangerous than
trying to dial a cell phone even if you don't have to look at the key.

Some clubs hold code practice on 2 meters so you might find something
locally.

Good luck, and again welcome,

Roger (K8RI)

You forgot one other - most of the new, heavily computerized,
multiband radios require a ground to prevent RF from causing problems
with the digital components inside the radio. In these radios, the
results of a poor ground can range from lost memories to erratic display behavior.

In fact, when these people are talking about a good ground, they're
not talking about a simple ground rod - they're talking about a ground
"system" consisting of multiple rods in conditioned earth.

Well, its a big secret to me. I've not seen anything that would "discourage" these people. They live in a free country, with the freedom to choose what they want. Have you ever considered the possibility that there are so few of these people simply because they don't want to enter technical fields? Just like I made the choice to enter a more technical career field, I guess they choose not to. And I suspect it is the same with their choice of hobby.

4875. Feed any log with Internet DX Spots!

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-14 00:00:00 UTC
From: fabsartoni@usa.net
Message-ID: <8n8pqpqdh1@nnrp1.deja.com>
Source record: 105230

Hello,

This is IK4VYX, Fabrizio, the developer of the
DXTelnet software package:
http://www.qsl.net/wd4ngb/telnet.htm

One of the things you can do with DXTelnet is to
connect simultaneously to many different kinds of
DX resources (telnet, http, IRC, RF) and, why not,
feed your log with the Internet DX spots received by
DXTelnet.
The format of the spots is the classic one (DX de ...)
so your log will not detect any difference.
The way how to do this mainly depends on the kind
of log you use (if it is Windows or DOS based)
and on the available system resources (if you have
only one or more serial ports, and if you plan to link
DXTelnet to your log using a single or separate PCs.
In any case, the minimum requirements are:

* A Windows PC connected to Internet
(All windows family is OK, except NT and 2000;
I don't know about Win ME)
* At least 1 free serial port
* The log must support a serial port connection
(for example a TNC port).

I made several experiments and I was able to feed
successfully dumb terminal applications such as
Hyperterminal (Windows) or Telix (DOS), this on a
single PC using just one (I repeat: JUST ONE)
serial port!!!

Note: even if your log already embeds a telnet client
to reach Internet DX clusters, using it combined
with DXTelnet is recommended: DXTelnet will bring
in more spots; if you dont believe my words just
download DXTelnet (see the above URL), install it
and connect to the CQDX-IRC node.
Moreover DXTelnet has DX Spot specific filters so
that you can choose which spots to feed and which
to ignore.
Just an example: a very useful filter is the
"Reject Old Spots" one; this, combined with
the antidupe filter, allows you to kill the spurious
DX spots sometimes originated by huge cluster loops,

especially during major contests.

As the link method depends on the log and on the
system you use, I will not spend pages here describing
all the different cases.
Just email me telling me which of these cases you
fall in:

A) DOS Log single port
B) DOS Log double port (or double PC)
C) Windows Log single port
D) Windows Log double port (or double PC)

I will be glad to email you a step by step describing
how to proceed in order to setup a link with immediate
benefits.

My email address is:

This approach would work. It would be just another interface between the
radio and the computer hardware. Using a structured approach to the
software design the differences between hardware interfaces can be hidden
from the application software.

I would be nice to have one common interface type to work with, but the
computer world seems to move too fast for any one interface to become a
"standard".

Thanks for the information. I hadn't forgotten it, I just didn't realize
that modern radios were so poorly shielded and so sensitive to common
mode current. The finest, most sensitive test equipment you can buy,
which is extremely immune to outside interference, doesn't require any
ground except the safety ground. So the requirement of additional ground
isn't due to computerization but to basically poor design. I'm not
surprised, though. The market places much more value on bells and
whistles than on robust design.

Into bicycling and ham-radio?
www.lafetra.com/bmha/
I'm not sure it'd be worth the $10/yr membership fee, but the idea's interesting.. ;)
When riding solo, atleast, talking to the 'locals' as you pass thru towns can be quite a bit of fun.. Unlike when driving a car when travelling thru an area, contacts can last for hrs when pedalling, too..
Assuming you've a good battery, that is...

Run the wire from the "unreachable area" to the side of your building at
an upper floor, then down to your apartment window and through. This
will work great, provided you can gain access tot he roof or uppe rfloor.

Posted this to r.r.a.policy a while ago ... what do we on wreck..misc think?

To: All concerned

I've been licensed since 7/1957, and since then, the single grimmest artifact I've noticed is that, then, my favorite band, 40 CW, had a ton of novices, generals, what ever grade, involved in enough activity to fill the available space with kew-so's 24/7.

The sidebanders would talk to people like me who broke in politely, using CW cuz I couldn't afford to build a W2ALE phasing rig.

W3BVN had a killer location and 40 CW signal, and I got to operate his station a time or two. What a difference, getting 589 in Europe at 2000Z on a winter afternoon, rather than the usual 459 during the morning opening from my old rockbound 6L6 and dipole up 20 feet and pointed east because I hadn't figured out great circles yet. Guess that explained the 469s from a few ZS6s.

It's the activity, Vern. Know whata mean, Vern? If somebody did a daylight-hours band-occupancy audit, where would we be? (In a cemetery?)

What's it take to get us on the air the way it used to be? Heck, then, there were only 100K or fewer of us.

It's the activity, Vern. Know whata mean, Vern? CU on 40 CW. It's still my favorite band.

Sep 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 15 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 11 (Sat): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Man-

chester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 12 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & Computer Expo. Allen County Amateur Radio Technical Society. 2000 Indiana ARRL State Convention. Allen County War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer
expo. The event is held on designated Saturdays from 9:30
AM to 3:00 PM. This show features computers, supplies,
games, parts, software, accessories, CD-ROM, monitors,
diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, etc. Lake County Fairgrounds,
Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall
Building #1=9720,000 sq. feet. For a show map, exhibitor
info, and discount coupon, visit the web site at

There's a newsgroup dedicated to you battlers.
alt.radio.scanner.flame_fest
This forum is for fine peace loving hams and hammesses who want to advance the hobby instead of advancing themselves into court on Internet libel charges.
And that's what you jokers are courting.
Every time I come here I see the same garbage about Mackey and Kendrick battling and Lord knows whom else associated with you. Like who cares?
I come here to learn the technicalities of ham radio and last night was taught how to solder a PL259 on a hank of coatch cable..I think the guy said coatch or cotatch or something like that. It's that black wire you plug into your transducer to make the RF flow out into the air.
And pay attention to this. Internet libel cases are skyrocketing and even on a flamethrowing newsgroup, you can overstep your bounds. You guys want to fork over big bucks to a lawyer instead of buying a spanking new Edwood or Yahoo?
Thank about it guys and back off before your wallets run dry.
AF2Y, an annointed Extra

I have a better idea...
Why don't both of you arrange
to meet each other at some hamfest and
flap your toothless gums at each other there?

I love to see old ham radio pharts like you two go at
it, complete with shaking knees, fat blubbering bellies hanging over
yer belts, greasy unwashed smelly hair and clothing which is
straight out of the 70's. Why not re-enact a classic Bluto vs Popeye
type brawl at Shelby or Vienna hamfest? We'd love to see it and laugh
at you two...

Well Vern, er I mean David,

Its D-layer obsorption, know what I mean Vern, er David?
Its also the old fart CW ops have died off or are too decrepit to send
anymore. Or, like me, get tired of CQing for hours and hours and
if/when you get a reply its at half the speed your sending.

Thats why I contest in CW mostly. Those boys know how to do it right.

So far no complaints and I live in an apartment. But here's what I do:
low pass filter, seldom run over 50W, but usually run 25W during day and
early evening, stay off bands that interfere with my own stereo
equipment - 15M for example, primary mode is CW. I've worked all 50
states, and about 30 countries like this with my homebrew dipole with no
neighbors beating down the door.
I figure the best way to resolve problems is not to cause them.

Blake just likes the attention he gets, & harasses me until he gets the attention.

Several months ago, I had been ingoring his repeated attempts at causing trouble &
harassing me. So then he did some junior detective work & figured out where my semi-retired elderly father worked & started to make harassing phone calls
to my father's work place.

THAT is how desperate Blake Bowers is to cause trouble.

4900. Interference on 900MHz or 2400MHZ from cordless phone.

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-15 00:00:00 UTC
From: "D. Stussy" <kd6lvw@bde-arc.ampr.org>
Message-ID: <Pine.LNX.4.10.10008151943330.6092-100000@exp.bde-arc.ampr.org>
Source record: 105058

Has anyone experienced an interference issue while operating as an amateur radio operator on these bands (33cm or 12cm) from cordless phone users and how was it resolved?

I am aware that amateur radio is higher in the "hierarchy" of services for these bands than "part 15 devices" which includes cordless phones. I would also see some potential hesitancy from the phone user to cease.

Considering the amount of 2.4GHz devices coming on the market (phones and remote video - the latter of which some hams are actually modifying for ATV use!), the potential for interference is growing.

I'm asking because I am getting inteference in the 12cm band (where I'm operating between 2402 and 2417 - where amateur radio is co-primary with the U.S. Goverment) and I'm attempting to figure out which neighbor has the phone that's interfering. BTW, their phone is awfully wide banded - sucking up over a full MHz. It's not spread spectrum, but really-WB-FM. Simply adding a PL circuit won't help either - I've detected that the phone isn't filtering out frequencies below 250 Hz (and when I used my radio to PL search on the phone's signal, it has detected a PL tone - a DIFFERENT one each time). My 12cm receiver attached to my 70cm repeater (as an experiment) is falsing most of the time when the offending phone is in use.

Note: Although I call it 12cm (for 2400-2450MHz), it's in the FCC rules as 13cm only because the worldwide allocation is for the ENTIRE 2300-2450MHz range, despite that in the U.S., we don't have 2310-2390 MHz for amateur use. If one does the wavelength computation, 2400-2450 MHz is actually 12cm, not 13cm.

4901. Re: Form To Use For Club License Application???

That form is only for applicants who take tests. A club does not take a test.
It has the box only for renewal purposes only. The name would be the name of
the club. Use of the form for non-individual purposes hasn't really been
implemented.

> Who signs? Where? And what boxes to check? This certainly isn't an

I'd use the OLD form 610-B, and it must be accepted until the FCC has a
replacement form or procedure.

Computers are so kewl, John Mackey told us he doesn't lie. John Mackey
told
us he doesn't change his name to advoid kill filters. John Mackey told
us he
was cleaning th group up. Computer are kewl! You can search things and
find
the truth. John Mackey hasn't been telling the truth. John Mackey comes
off
to myself and it seems over 45 users as a liar. Computers are kewl.
Here's
what they show me.

According to the proof above provided by Deja.com John (call me
toilet-boy
or
Corky) Mackey is more than a liar. He strikes me as very very sick.
These
are
just 15 of the different names he has used in the past few months.
Thousands
of messages but all are calling people liars or trying to convince us
John
(call me toilet-boy or Corky) Mackey is better than a dead man.

4905. Installing radio in 1989 Nissan Maxima

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-15 00:00:00 UTC
From: Walter Francis <wally@theblackmoor.net>
Message-ID: <3999C194.70C037C9@theblackmoor.net>
Source record: 105063

I have a 1989 Nissan Maxima which I'm installing a 2M rig in, but I have searched and searched for a place to feed the power cables through without any luck!

This is the first year model when the body went to a more contoured shape, it's not the boxy Maxima. The firewall is mostly welded steel, and the middle is a tough plastic-like material with various hardware going through it, but it's all too small or sealed up. There is a wiring harness going in through the firewall, but it appears to be completely packed tight with wires, but I'll be looking into that some more.

Sheesh.. my old Tercel had a big rubber plug to yank out and ya could poke wires right through.. :)

Thanks for any suggestions!!

4911. Re: Ham radio demographics

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-15 00:00:00 UTC
From: Rodney Isom <rodneyi@noooospam.hiwaay.net>
Message-ID: <spjthmcar5j46@corp.supernews.com>
Source record: 105069

I'm 32 years old and became a ham when I was about 26 (I guess that would be considered a younger ham). I'm also an electrical engineer, so I've been involved in the 'technical' scene for some time. However, I didn't really know what ham radio was until I went to the library to look for books about scanning because I had just gotten a scanner for my birthday. I grabbed "Now You're Talking" just because it was on the shelf next to what I was looking at. The rest is history.

I had probably heard of ham radio at some time or other, but it just never stuck in my mind because I didn't know what it was all about. I think a great part of the reason younger people who might otherwise be interested don't get into ham radio is that they are not aware of it. I guess we really don't have enough money available as a group to put together TV commercials about the hobby, but I wonder if there isn't some way we could raise awareness about it. Most people I know think of amateur radio operators as those guys who help with communications after the hurricane, but they don't know it's something they can get involved in if they want and they don't know why they would want to.

So that's how you're trying to describe suppressing the truth about you,
Toilet Boy? You can keep trying to emulate your Nazi propaganda heroes,
but you're out of your league there. You lack the intellect to
understand
their methods.

Here are a few pieces of evidence for you chew on, Toilet Boy. This should keep you frothing for a while. You know the rest of the evidence exists; this is enough to prove my point. You are a liar and a fraud, Toilet Boy.

To your dimwitted friend Larry Johnson, two things:

First: Not only is the emperor wearing no clothes, but he's wearing last year's fashion.

Second: Go commit intrapersonal intercourse.

Well, I don't see how Yaesu could shield their FT-847 any better. It has an all metal case with 7 layers of component boards inside, with each board surrounded with its own metal shielding. In addition, a large number of the components on each board has still more shielding. Yet, this radio is really bad when it comes to poor grounding.

In Washington State, where the ground was relatively dry and rocky, I had to install a ground system consisting of multiple rods to get proper performance. On the other hand, here in South Carolina, where the soil is moist and tightly packed, a single ground rod was plenty.

In my specific radio, the results of poor ground makes itself known in the sideband performance - a slightly distorted signal. However, from what I have heard, this appears to vary with each radio (others have reported other problems, all solved with a better ground). The manual warns about this, but most (like myself) ignore it until a problem crops up.

Anyway, I'm not so sure it is poor shielding, or just a result of trying to stuff so much stuff into one radio. I don't know enough about all this to judge. But, I do know I love that radio's performance, and its capabilities. So, I can deal with this minor issue.

> be able to figure out why.

I think it is a mistake to define ham radio only for its potential for employment. At one time, it did serve that purpose.

Heck, at one time a person get a job selling televisions at a local store just by having a TV at home. But televisions have remained popular, in spite of the fact that a person of not likely to get a job today just by owning one. Why should ham radio be any different?

Perhaps taking a look at television might be a good way to discover why ham radio is losing ground. Lets look at a few facts first. First, computers are competing with television, but you don't see the sells of televisions going down because of it. So, obviously, computers are not killing off all other technologies, and there is no reason to believe it is affecting radio that much either.

Second, television remains strong becuase it offers something - fun, entertainment, or whatever you want to call it. In other words, people still enjoy watching television.

And, perhaps that is the key. Perhaps we need to make ham radio more enjoyable. Instead of just conversations on the radio, we have to try for more entertaining conversations. Not just discussions about radios, but conversations that make poeple feel good and laugh (not that silly "hi" nonsense, but real human "feel good" laughter).

Instead of just ham fests, we have to have more "fun" at the ham fests (music, games, activities, and other stuff). This is especially true for the people who have no big interest in radio, but are dragged to fests because the "old man" wanted to stop by. Perhaps if these people had more "fun" at the fest, they might be more open to ham radio in general.

In fact, perhaps all fests should make an effort to be more inclusive - more a general fest where all people can come to have fun, instead of a fest for just ham operators to look over the booths.

Hey, a little fun can't hurt, and it just might turn this hobby around into something that is more accepted in our communities.

According to the proof above provided by Deja.com John (call me
toilet-boy
or
Corky) Mackey is more than a liar. He strikes me as very very sick.
These
are
just 15 of the different names he has used in the past few months.
Thousands
of messages but all are calling people liars or trying to convince us
John
(call me toilet-boy or Corky) Mackey is better than a dead man.

>
>Jim

Jim,
The best thing to do is get the form in hand and then call the FCC (number should be on form or look at their Web Site).

You should be the trustee, and you will need another person from the club to sign the form also.

Good luck.

The Democrats at their CONvention brought up the gun issue "defiantly" and
early.
Do you know how many democrats with guns and NRA memberships just changed
affiliation? BUSH WINS. Thanks Col. Armyballs for the good news. :-)

AlGore.

Gee,
I go away for over a year and lookie what happens...

Both you guys just take it out on the playground and beat yourselves
to a pulp.

Speaking as a person in the know, Let me clarify a few things:
1. John Mackey was, in fact, removed from 2 forums
on FIDONET because of his questionable behavior
and extreme opinions
2. Mr. mackey has lied so many times, even he doesn't know the truth
3. Mr. Mackey has, at various times, attempted to harrass those who
disagree with his view of the world, even to the point of telephone
harrassment, calling on others to harrass the intended victim
through various other means, and generally made an ass of himself.
4. Mr. Mackey's exploits as a "technician" are well known in portland oregon
(so much so, that everyone there has refused to allow him to touch their
electronic equipment for any reason whatsoever).
5. Mr. mackey's "on the air" exploits have lead to his being permanently banned
from the use of several repeaters in the state of oregon.

Basically, Mr. Mackey has a lot to answer for, but continues attempting to
place the blame on others (by false accusation, obfuscation, inuendo
and base turpitude). His credibility as a ham (as well as a man) is so low
that it cannot be measured.

HE HAS EVEN ATTEMPTED TO HARRASS ME (without much succes)
He is in a permanent state of denial, refuses to give way on an unsupportable
position, continues to rag others for the problems HE ORIGINALLY CREATED
and has even gone so far as to disrespect those members of the SK ham community!

This is the last that I will be heard from in theis forum. Others know the truth
and they will speak their minds in their own way.

You are desperate John. A quick call to Lolenzo T. Poe, (503) 248-3691 (email address is lolenzo.t.poe@co.multnomah.or.us) reveals John Mackey "Jr" is a contract employee with Multnomah County. Next we find (503) 306-5875, ext. 27298 is your phone number. Not some retired guy but stupid sounding John Mackey! Oh yeah, your email is john.mackey@co.multnomah.or.us I'll make sure I forward all your crap to that mail box. Internet phone and E-mail is SO much fun!!

WHo's your Daddy?

Not ext 27298!

Timmy

Reposted without permission ---> Kudos to Richard Kendrick <wa7twi@primenet.com> who is the author of the original version of this story. It was first posted on October 30, 1996 in alt.radio.scanner and rec.radio.scanner.

"All Hail King Mackey The Great Liar"

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

>Yet, this radio is really bad when it comes to poor grounding.

As I explained earlier, it isn't the shielding that's the problem.

It's how the bring the leads into and out of the case, and how they
ground and bypass the jacks that are the problem.

You can have all the shielding in the world and one poorly routed and
bypassed lead wiill totally negate all the layers of shields.

Greetings ALL:

This is the final notice with only eight hours remaining.

19" Desktop equipment rack/cabinet

The outside dimensions are 24" (W) x 13" (H) ax 16" (D)
The inside (opening) dimensions are 19" (W) x 8.75" (H) x 15.5" (D)* This measurement is from mounting rib to mounting rib (front to back). It also has two rails on the inside bottom that are adjustable, width wise.
Top and Bottom panels are screens.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=405416380

Good luck and thank you.

4942. Re: How precise must a wire antenna be?

The antenna they call a G5RV is simply a dipole antenna, 102' feet long, with about 32' of ladder line feed in. Some people attach the ladder line to coax and bring that into the shack, some just feed the ladder line into the shack - I've tried both and settled for just using the ladder line to my tuner...works like a champ.

With a tuner (it need not be an expensive one - check MFJ) you can run all ham bands with this antenna and it's very cheap to build. Don't buy a commercial version - try building your own - it's a lot of fun and you'll learn a few things that simply writing a check wont teach you. :))

Hope this helps...

John

4948. TH-79AT Display flickering

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-16 00:00:00 UTC
From: Isidore Leblanc <hotdog@globetrotter.qc.ca>
Message-ID: <399AE21A.C9DC0A01@globetrotter.qc.ca>
Source record: 105008

Does someone ever have such problem with that dual bander ?
Every time I turn it on the display is unreadable and after few seconds
the characters come back but are flickering.
It doesn't affect the operation of the radio at all.
I've tried to clean the contacts of he small ribbon connector inside but
no success.

Someone can help ?

Thanks !

4950. Grounding Dilemma - Need Advice

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-16 00:00:00 UTC
From: Richard Myers <rkmyers@mediaone.net>
Message-ID: <ZWCm5.32822$_s1.389538@typhoon.ne.mediaone.net>
Source record: 105010

I'm trying to put together my first shack and have read the literature regarding safe operation especially with regard to providing a good earth ground. I have quite modest eqipment at this point. A power supply, amplifier (for use with a handheld), and a 2 meter mobile transceiver(max. 40 watts) that will double as a base station. My dilemma is that neither the amp nor the mobile rig have a proper grounding terminal. As I understand it, the manufacturer ties all of the internals that should run to earth ground to one point which is accesible externally.

I mentioned this to the guys at HRO and they told me that for my requirements grounding was not an issue and that even the power supply really wouldn't need to be grounded.

Hmmmm. What's the real answer here. Thanks in advance.

Rick, KB1FLR

Well,
its been substantially more than a year since last I was on the net
(in any real capacity) and it seems all the old arguements are
still going on.

You have the pro-code V. the no-code,
John Mackey V. Everybody
complaints about whats happening with several players on
75/80 meters...

Its the same old shit day after day... when are you guys going
to wake up and smell the coffee? no one in the REAL WORLD
cares much for all this complaining...

Besides, any real information that can be disseminated here is lost
amongst
all the BS flying around... Anyone new to ham radio is going to look at
this
mess and decide that ham radio is nothing but a bunch of immature,
childish people with way too much time on their hands and damn little
sense.
Gee. what a poor example to the new, up and coming ham!!!!

Oh well, its jerks like the prime examples in this newsgroup that have
made
it tough on everyone else. too bad we can't put y'all on an island and
let you
duke it out.

>with this they reply that they just wanted to get the auction
>going...Well to me that sounds like rigging an auction.....So I guess
>ther little false bidder scheme did not work after all.............73,

Here's my eBay story: about a month ago I bid on a radio and lost to another bidder. Approximately two weeks after the auction ended, I received an email from the seller of the radio (a ham operator, by the way) who said that he had been unable to contact the high bidder and therefore I had become the high bidder by default. When I responded to the seller's email and stated that I was no longer interested in buying his rig, he became very indignant and insisted that I was obligated to purchase his radio because I had bid on it--NOT!! eBay policy states that if a seller is unable to contact the high bidder, then the seller may offer the item for sale to other bidders. But eBay makes it clear that other bidders are under no obligation to purchase the item from the seller if the high bidder defaults. Be aware of this scam if you happen to bid on an item and lose out to another bidder. A bid is a contract to buy ONLY if you are the high bidder on the item. 73 . . . . David, KD7FXK.

Source record: 105024
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

That makes a total of two rigs I know of which have 6 dB per S-Unit. Someone else reported the Kachina to have S-Units of this size. All other rigs I've measured, and which I've gotten reports on, have had S-units of a maximum of 5 dB (typical for some Kenwoods), and somewhat less to much less for other rigs like my Icom. The S meter typically indicates the AGC voltage, which is a more-or-less logarithmic function of the signal strength. A lot of rigs are set up for 50 microvolts for S-9, but that's a simple, one-point adjustment, and has nothing to do with the scale sensitivity and linearity. Reg's rig is the only one I've heard of which actually has an adjustment for the S meter sensitivity, and I have no idea how it's made to be constant over the scale. Unfortunately, Reg has apparently never actually measured his to ascertain whether it's adjusted correctly, or whether it's linear. (Or at least, he's never shared his measurement results with us.) There also seems to be something regional about this -- apparently only the Japanese rigs shipped to the U.K. have this adjustment, but not the ones sent to the U.S. Or maybe only the U.K. ones are adjusted properly -- this isn't entirely clear to me. It is clear, though, that meters which have never been measured are always perfectly accurate.

Thanks for the posting -- I'll add yours to the short list of rigs which actually have a 6 dB per S unit meter. You, and the Kachina users, can interpret the S unit as used by most popular writers to the marks on your meter scale. The rest of us can be seriously in error if we do that.

4965. MTS2000 800mhz flash port radios

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-16 00:00:00 UTC
From: David E Murman <dmurman@wt.net>
Message-ID: <399b6135$1_4@data.wt.net>
Source record: 105025

I am looking for a supply of refurbished MTS2000 portable radios. The model number of the radios that I am looking for are H01UCH6PW1BN. These can be with the full keypad or just six digits.

I purchased on not too long ago from a company in Ca but don't remember who. Also I paid $500 for the radio and would like to keep in that range.

Would prefer a company that is selling these than an individual as the money for these are coming from the Sheriff and these radios will be going to the reserve deputies.

If you have or know where I can get this type of radio please E-Mail me at dmurman@wt.net.

Thanks;
David

I am Rick Larson

I'm sure Richard has his killfilters activated like he always claims.

This is an example of his perverted style of self righteousness.

Rick,

> Yes, Corky Kendrick
> You will still act like the Ceek-A-Like that you are.
> Shut up.
> Surely you must realize that you are a big part of this problem.

Thank you for your input. However, I do believe that, perhaps, you have misunderstood the situation because you are somewhat unfamiliar with the entire history of Cheek and Mackey. My condemnation of Mackey is not because I was friends with Bill Cheek. It is because of Mackey's deplorable behavior over the last few years and my refusal to tolerate it.

I would respond the same if the situation were arranged differently. For instance, suppose Mackey were Cheek and you were Mackey. If you acted the way Mackey has acted towards Cheek (and others), I would be denouncing *your* behavior. In other words, it's NOT who is involved, but the actions of the involved parties.

As a comparison, William Shockley, one of the co-inventors of the transistor, was one of the greatest contributors to technology of the twentieth century. But, Shockley was also an ardent racist and wrote extensively on the intellectual inferiority of black people. In the case of Cheek, you cannot deny that he has contributed to the enjoyment of the scanner hobby by many many people through his books and articles in Monitoring Times, and the help he gave people in the scanner newsgroups. You can admire the mans achievements, but you might not admire the man. You cannot say the same about Mackey.

I'll bet there have been a few times in your life when you've witnessed a disturbance of one type or another and silently wished someone would speak up, perhaps even to intervene. I am the kind of person that *will* speak up and intervene if necessary. Once again, this is not about Mackey but about Mackey's behavior.

In short, I will not tolerate the reckless and destructive behavior of people like Mackey. I have and will continue to stand up and say so, loudly. I urge you to do the same.

73,

Richard

Hey, go for it! 50 years on the sending iron is great! I would like
it if I could match my OM's 70 years on the sending iron, but I will
probably be pushing up daisies before that happens.

Good luck and enjoy your time on the sending iron..... whatever it may be!

4968. How precise must a wire antenna be?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-16 00:48:23 UTC
From: jason_hsu@my-deja.com
Message-ID: <8ncoci$58u$1@nnrp1.deja.com>
Source record: 105077
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

How precisely cut must a wire antenna be? I have heard about 1/2
wavelength wire antennas, but if the wire must be close to this length,
then you can only use one band or are willing to have several different
antennas. I know that tuners are intended to correct mismatches, but I
have heard that performance does suffer if the mismatch to be corrected
is high enough and that an even bigger mismatch can be too much for a
tuner to handle.

Can anyone shed some light on this? I'm confused.

A good antenna matching unit can handle a lot. You could cut for the
lowest band and use a matchbox to tune on other bands. You may want to
go to open ladder line rather than coax for this however as even
harmonics of the fundamental will be feeding into a current node
(voltage peak) and coax loss can be high (well, perhaps not with
hardline!). I had a lot of grief with a vertical, a dipole, and a
folded dipole as a kid. I ended up buying a few LARGE spools of 8 ga
stranded wire - and strung several hundred feet across my parents'
property at heights varying from 30 to 50 feet. It terminated at the
far end into a chain link fence running several more hundred feet
(reasonable DC ground - not safety ground). I ran a Johnson Viking
Ranger I into this thing and worked the world with 65 watts AM and 75
watts CW. I also had one HUGE signal on 160 meters! Nothing like a
lot of wire and a good tuner!

That price is incorrect. alt.dbs.echostar seems to be the best newsgroup to follow this. They talk about a $69.95 monthly rate, about $500 equipment (includes required new computer), $200 installation. Clearly this is a service only of interest to people who can't access DSL or cable modems.

Amazing. The 756 I had was a mile off. The scale wasn't even close to correct at the low end, although with the preamp off it was about 55 microvolts at S 9.

Once in a while a certain rig of a certain model pops up that apparently is accurate. Too bad the manufacturers can make most of them that way.

I've got 7 radios sitting here in this room, and not one is correct. Most of them don't even have the scale marked "correctly", and because of that can NEVER be calibrated to anything other than 5 dB or less per S unit.

Shame on Icom and Drake for being so stupid they marked the scales wrong, having the same change in meter current below S-9 being 5 dB per S unit instead of 6, when compared to the dB markings on the meters!

I guess thy must use a complex external circuit to make meter sensitivity change at S-9 to a entirely new slope, to make up for the engineering mistake on the scales.

Collins also.

Rick -
It is interesting that in Richard's writing to you he says,
"I will not tolerate the reckless and destructive behavior of people".
He continues to say, "I have and will continue to stand up and say so,
loudly. I urge you to do the same".

You have said so loudly that will not tolorate reckless and destructive
behavior as demonstrated by Richard Kendrick. Yet he is harassing
& condemming you and I for standing up for the very things he tells
us to which HE is committing.

John, I realize following a thread is difficult for you, it explains your being a blithering idiot.

But in the message you replied to, it clearly stated what we were waiting on. Have you considered remedial help with your reading?

We are waiting on the name, badge number, report number, of the officer that you supposedly filed a report with on me for my alleged phone call.

You have been asked for this time and time again, and you have been proven a liar by default for not providing this information.

> still going on.

This is to be completely expected Eric! R.H. has cleaned up all
of the ham radio cesspools (14.313/3894.5/3.853/3.865 etc etc..)
and there is *nowhere else* for these obcessive compulsive ham radio
jammers to fly to but the internet newsgroups, seeing that the FCC has
got all of them DF'ed and ID'ed their all now sittin ducks on the radio
transmitter.

> You have the pro-code V. the no-code,
> John Mackey V. Everybody

> 75/80 meters...
>
> Its the same old shit day after day... when are you guys going
> to wake up and smell the coffee? no one in the REAL WORLD
> cares much for all this complaining...

But THEY CARE about it Eric. It is their ONLY purpose
reason left for suckin in oxygen. I personally wish that R.H. had
never come on the scene. They'd all be back on 14.313 and
one of several shitstained "spots" on 75 meters. I really do miss
the Mike & Judy show, the OTK wars, Festering-Zit's
pontificating on politics, BigAl in Hickory creative jamming
tapes, Vietnam Dan sayin he's gonna "kill em and eat em all"
the transmission-guy in Benton Harbor what loves pueto-rikans,
and best of all - James R Vining's all-night drunken ramblings
on 3.853 (Now there's a guy who's filthly mouth alone could
knock a moulting buzzard from off of a piled-high shitwagon
at 50 yards)

Trust me Eric: "B.H." [Before Hollingsworth] ham radio ssb
swl'ing was like watching an HBO comedy special. You had
great entertainment for much less than the cost of a cable
TV subscription all freakin day and night.

Now all we gots left is that commensurate flaming asshole
"preacher john" on 14.313 and the right winger yahoos on
3950. Phooey! The arbitron ratings just took a nosedive
into the toilet. Watchin the freakin DNC on C-SPAN is more
entertaining!

You're a radio engineer, Tom. What would you do to make an
accurate S meter, or even and S meter accurate?

Hi all. I have five nice items on Ebay for sale. The auctions end
Sunday August 20, beginning at around 18:30 (6:30 PM California time):

Drake R4-C: LOADED and fully updated:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411060066

Drake T4X-C: Super Powerful:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411085258

Astatic D104 Night Eagle:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411041657

Drake AC-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411002050

Drake MS-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=410979461

All items are fully satisfaction guaranteed.

Thanks for your interest and good luck with your bidding.

Neil

This is somewhat "Off Topic" but it brings up a question that I've always wondered about. Can one use Ladder line on a sided house with storm windows???? I understand that the desire is to keep the line away from metal whenever possible.

Thanks ..... John

Hi Bob,
Agreed. Three words you don't want to hear are: "It's too late". In some ways, I suppose that is how it is with morse and the FCC endorsement. But if you come on through Grants Pass, Or. the VE team offers any morse level endorsement you want to try. Computer generated morse testing, individual booth with earphones, gosh, it's almost a done deal. After checking around though I see that lots of VE teams are doing the same thing Bob! We think it's pretty cool getting one of our big wall mount endorsements for 15, 20, 25, even 30 wpm. I'd like to hear from other teams, what they are offering, new ideas, make it even more fun!

"D. Stussy" <kd6lvw@bde-arc.ampr.org>
shared these priceless pearls of wisdom:

->>
->> The NCVEC quick-form 605 has spaces for Amateur Club application, but no
->> information as to what the FCC/ARRL wants for Name and Address. The
trustee?
->> The club itself? The sponsoring institution (this is a school club)? The
dean
->> of the college?
->
->That form is only for applicants who take tests. A club does not take a test.
->It has the box only for renewal purposes only. The name would be the name of
->the club. Use of the form for non-individual purposes hasn't really been
->implemented.

If you are part of the headquarters VEC team, I'll take your word at face value.
Otherwise somebody is going to have to explain why the back of the form says
that it can be used for club applications (as opposed to renewals).

John,
I'll remind you of the same thing I just reminded frg9600 of
just 24 hours ago:

any attempt by you to start an arguement with a fellow @home user
will be reported to the @home abuse dept. Basically, right now, you are
violating TOS here.

Now, if you bother to bounce an e-mail here, you'll find out that
n7zzt@home.com is a real account. as for proudhawk19021@home.com,
I have no idea who that is, so please don't go draggin others into your
fantasy.

In the meantime, you have a lot to answer for. Should I just take all your
postings of late (they are easily accessible from deja) and forward them
as a digest to @home? Abusing behavior like your will not be tolerated.

now, start telling the truth or you might as well leave the net.

I have an elderly friend who has an old piece of U.S. radio equipment. He asked me if I knew anyone who might be able to offer any help with basic operating information or perhaps knows anything about the old RCA Wavemeter TE149? Is the instrument likely to be valuable and are handbooks still available? Thanks for the interest de Ken/G4MPQ

5020. Antenna Restrictions & Covenants

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-17 00:00:00 UTC
From: jack albert <jwa@tellabs.com>
Message-ID: <vNXm5.46$0z3.303@wdc-read-01.qwest.net>
Source record: 104978

Trying to purchase a new house without Antenna restrictions or covenants is really difficult and
I'm a little bit confused on the FCC policies concerning the private contractual agreements.
(I snipped the FCC's comments on a petition that was presented by the ARRL)

I was told by a real-estate agent that restrictions and covenants are similar to leans against the property and
are held as public record at the County Dead Office. They are not signed by or agreed to by persons that
purchase the property. They are adopted by the land developers and I guess you can that they are policed
by the Home Owners Associations!

If I purchase the property and pay cash for it but I don't sign the covenant or agreement, how can that be an
agreement between two parties and how can I be restricted by the covenants?

----------SNIP----------

Federal Communications Commission DA 99-2
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)

Modification and Clarification of Policies and)
Procedures Governing Siting and Maintenance) RM-8763
of Amateur Radio Antennas and Support)
Structures, and Amendment of Section 97.15)
of the Commission's Rules Governing the)
Amateur Radio Service.)

ORDER

Adopted: November 18, 1999 Released: November 19, 1999
By the Deputy Chief, Wireless Telecommunications Bureau:

-----SNIP---------
-----SNIP---------

III. Discussion
6. The Commission's policy with respect to restrictive covenants is clearly stated in the MO&O establishing a limited preemption of state and local

regulations. In the MO&O, the Commission stated that PRB-1 does not reach restrictive covenants in private contractual agreements.17 The Petitioner argues
that enforcement of a covenant by the court constitutes "state action", thus converting what otherwise would be a private matter into a matter of state regulation and, thus, subject to the Commission's limited preemption policy.18
Notwithstanding the clear policy statement that was set forth in PRB-1 excluding restrictive covenants in private contractual agreements as being outside the reach of our limited preemption,19 we nevertheless strongly encourage associations of homeowners and private contracting parties to follow
the principle of reasonable accommodation and to apply it to any and all instances of amateur service communications where they may be involved. Although we do not hesitate to offer such encouragement, we are not persuaded
by the Petition or the comments in support thereof that specific rule provisions bringing the private restrictive covenants within the ambit of PRB-1
are necessary or appropriate at this time. Having reached this conclusion, we
need not resolve the issue of whether, or under what circumstances, judicial enforcement of private covenants would constitute "state action."

5021. Demographics revisited

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-17 00:00:00 UTC
From: sbcmusic@aol.com
Message-ID: <20000817162704.18973.00000026@nso-fs.aol.com>
Source record: 104979

I've been reading with interest the replies to the post titled "Ham Radio Demographics" or something like that :)))))))))

I see the problem as being two-fold. First, most of us, as hams, do very, very little to recruit prospective hams into the "fold". How long has it been since any of us actually did some serious recruiting? In the business world, megabucks are spent on recruiting, especially in areas where a particular job is a little less well known.

Such as it is with Ham Radio.....especially with the advent of the internet, Ham Radio is a little less well known hobby. Some effort spent on recruitment would be well spent.

Secondly, is that the majority of hams are, simply, unknown. When a newcomer, or someone who is just interested in ham radio, wants to find more info about our service, where is the likely place they will go? Likely to internet newsgroups or mailing lists.....and, unfortunately, they seem to be populated by people we do anything BUT represent the majority of hams today. We see newsgroups and mailing lists dominated by a few, strong willed individuals with plenty of time to post their comments, backbiting, etc etc, while the majority of hams are like you and I.....hard working, "regular" people.....people who don't spend ALL their time on the internet, making malicious, sometimes false, usually childish posts.

I think it's asking too much for many of these people to look at the way they present ham radio.....they're much more concerned with THEIR image than the image of the service.

What's the solution? I'm not sure. I do know that I promote ham radio every chance I get.....but, one whiff of some hams behavior can destroy everything I've worked for.

I'd sure like to find a solution.....comments and questions and solutions more than welcome :)))))))))

Gee, Bill, sounds interesting. Alas, the only endorsement I really want
is the 6mos. service endorsement on my 2nd teleg. That, anymore is
unobtainium. The VE wpm endorsements might be a fun incentive, though,
for many folks. If I am ever out to Grants Pass, and have my mill and
tin cans aboard, I'll holler. Can I request the latest offshore wx
for copy?

Tom must be busy having a life, so I'll take a shot at this question if you don't mind. What you'd need in order to make an accurate S meter (and by this I mean an S meter in which the divisions are an equal and known number of dB apart) is to have the AGC voltage be a truly logarithmic function of the input signal level. This would have to hold over a wide range of signal levels. If I were designing a receiver today to do this, I'd probably begin by looking into some of the log amps available from Analog Devices. Using one in a feedback loop might do the job. Doing it any other way wouldn't be easy. Although a crudely logarithmic function is easy to come up with, one which is truly logarithmic over a wide range, and reasonably temperature stable, isn't. Spectrum analyzers have a logarithmic response over a wide range -- if you think it's simple, take a look at the log amp schematics for a spectrum analyzer.

Consider the fact that receiver manufacturers have been producing receivers for decades which don't have 6 dB per S unit. And their customers frankly don't care. I strongly doubt that an accurate S meter (meaning one with a known and constant number of dB per division) would sell a half dozen more receivers -- in fact, a 6 dB-per-S-unit meter would be regarded as being "dead", and might well inhibit sales. So what incentive do receiver manufacturers have for going to the expense of making a 6 dB per unit S meter? None at all.

Or you can do it all in DSP like my W-J HF-1000.

I haven't verified it's signal strength meter performance, but it is unabashedly calibrated in dBm (with S-units superimposed). Considering W-J's reputation, I suspect it is pretty accurate.

Gray

Roy,

Well, I've measured my S meter's accuracy, and it is
exaqctly as Reg described. This was on a cheap
Uniden - the "President" model which also goes
by model number 2510. It is a 10 meter all mode
radio, used as the IF for a 6 meter transverter.
I measured it because the transverter seemed to
hear very poorly. Any way, it was exactly on,
yet the setup was still deaf. I got to questioning the
accuracy of my signal generator - an HP 608 D.
So I brought the setup to a friends house, and he
measured it with his test equipment - it was spot on.
But there was a major difference - when we hooked
the transverter to his antenna, all of a sudden I could
hear 6 meter signals. 6 antennas later, I'm still
fairly deaf at my qth - but the rig works.

My guess is that most new radios are fairly accurate -
when the s-meter shows S-9 you've got close to
100 microvolts. I expect accuracy drops off the farther
away from S-9 you get. My Uniden was pretty good
down to S 3 or S 4 - I don't remember which.
When I get a few projects out of the way, I'll drag
my 746 over to the generator and see how accurate
it's " s-meter " is. (Not a meter at all - a horizontal
bar graph on the LCD display). The same ham who
performed the second test on my Uniden - he also
uses an HP 608 D - tested his 756 and found it was
slightly off in the wattmeter. I do not remember whether
he tested the S meter, but my bet is he did. He is quite
meticulous about those things. If he did test it, he would
surely have told me if the S-meter was off. I'll have to ask
him. Or, if you work him, you can ask him yourself.
His call is WA2WEJ

The first thing I'd do Tom is re-mark the scales on the meters, so the
scale was divided so that 6dB with a given current change in the meter
above S-9 was the same as an S unit below S-9.

Then I'd build a separate receiver for the S meter using a log amp of
some form with a step attenuator, and keep it out of the AGC loop.

Hmmm. Sound's like too much work to have the S meter. I'd buy a W-J
commercial receiver, make sure it was correct, and give dB reports
over my noise floor.

As was pointed out, S-9 on my antennas might be 10 dB or more
different than S-9 down the road. So who cares?

Hi All
I Have a Kenwood TM-221A And the lamps went bad in the display. Does
anyone
a part number of these lamps or the type and voltage? So that I may pick
them up at a local parts store?
Thanks & 73's
Bob - WA2AAR

Reading in "Modern Manners; Etiquette for Rude People" by P. J. O'Rourke:

Henry Beard, one of the founders of the National Lampoon magazine and America's premier living expert on playing with food, has a great stunt with stainless-steel hinged-top coffee creamers. Using his thumb to move the creamer lid, Henry gets "Carl the Creamer" to talk. Carl (he speaks in a very high voice) says, "Henry, I'm hungry." Henry feeds Carl all sorts of things -- sugar packets, bits of squashed-up food, cigarette butts, and so on. But Carl always eats too much. "Henry, I feel sick," he says. The Carl throws up on somebody at the table whom no one can stand.

5051. Yaesu 8500 Memory problem?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-18 00:00:00 UTC
From: Darren Williams <dlwjmw@eagnet.com>
Message-ID: <399D9101.21B79765@eagnet.com>
Source record: 104915

I have a problem with my Yaseu 8500. When power is removed from the

power cable for more than 30 minutes then turned back on the radio goes into VFO mode and the squelch opens for both VHF and UHF. It will not do it if you remove power for about 5 to 10 minutes then turn it back on. It doesn't totally wipe out the memories though because it still has all the programed repeaters that I have programed in memory. Currently the radio gets power when my car's ignition is turned on (it is not connected straight to the battery). Is this a sign that the internal battery is going out or does this radio even have an internal battery? Has anyone had any similar problems? Any suggestions would be

appreciated.

Hi,
I have a VX-5R and have found it to be quite a lot of radio for crammed into a very small space. I have been able to hit fairly distant repeaters on 2m and regularly receive good signal reports. When transmitting at 5w the radio heats up quickly. At 5w I use the VOX headset to place the radio away from head and eyes. Feel free to e-mail me with any other questions.

I have an Icom H2T that I like for the following reasons:
- Moderate price
- Rugged
- Takes regular AA batteries.
NiCads come with it, but you can use alkalines if you're not going to be
around the charger. It's 2M single band and pwr is 1 or 5 watts.

Message-ID: <YNjn5.10172$i5.303914@news1.rdc2.on.home.com>
Source record: 104921

I have a very high level of ignition noise coming through my mobile HF set. I have grounded the hood to the body, installed a 40 amp noise filter, even ran the ground power wire direct to the battery. Nothing is helping. Am I missing something? One thing I noticed with no ground wire connected to the radio it still turns on. I assume this is from the antenna ground connection. Should it be this way? I have an HF mount on the rear and a 6m trunk lip Larsen both with proper grounds.

Any help appreciated.

5058. California Man Arrested For Unlicensed Operation

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-18 00:00:00 UTC
From: Kevin
Message-ID: <27jrps4tsqaj2qcj37i7nqcs2jpoesthgn@4ax.com>
Source record: 104922

From:
The ARRL Letter
Vol. 19, No. 31
August 18, 2000

CALIFORNIA MAN ARRESTED FOR UNLICENSED OPERATION

A California man with a long history of alleged unlicensed operation has been arrested . The FCC reports that Richard Allen Burton was taken into custody August 5. The action follows Burton's indictment in May by a grand jury for the US District Court for the Central District of California. Burton, a former amateur licensee, has been charged with six felony counts of violating the Communications Act of 1934.

The FCC says Burton was operating without a license on Amateur Radio repeaters in Southern California after his license was revoked. Formerly WB6JAC, Burton's General ticket was lifted in 1981. He was convicted in 1982 on four counts of transmitting without a license and two counts of transmitting "obscene, indecent or profane words, language or meaning." Burton initially was sentenced to serve six months of an eight year prison term, with the remainder suspended. Upon appeal, the US Ninth District Court of Appeals upheld the unlicensed operation conviction but threw out his obscenity conviction. A California man with a long history of alleged unlicensed operation has been arrested. The FCC reports that Richard Allen Burton was taken into custody August 5. The action follows Burton's indictment in May by a grand jury for the US District Court for the Central District of California. Burton, a former amateur licensee, has been charged with six felony counts of violating the Communications Act of 1934.

The FCC says Burton was operating without a license on Amateur Radio repeaters in Southern California after his license was revoked. Formerly WB6JAC, Burton's General ticket was lifted in 1981. He was convicted in 1982 on four counts of transmitting without a license and two counts of transmitting "obscene, indecent or profane words, language or meaning." Burton initially was sentenced to serve six months of an eight year prison term, with the remainder suspended. Upon appeal, the US Ninth District Court of Appeals upheld the unlicensed operation conviction but threw out his obscenity conviction. The FCC says that Burton transmitted without a license while on probation in 1984 and again in 1990. After the second incident, he was fined and received a year's probation.

In 1992, Burton attempted to get his Amateur Radio license back, but the FCC refused to reinstate him. He was briefly successful in getting a ham ticket in 1996, when he passed a Technician exam at a VE session. The FCC granted Burton a new license and the call sign KF6GKS, which was promptly set aside as soon as the Commission realized its error.

The FCC said that bail for Burton was set at $20,000. He's out on bond.
Burton pleaded not guilty at his arraignment, and a trial has been set for
October 3.

When you were badgering Cheek for data about his degrees, you used every angle you could to embarrass and shame him into revealing the information. You trotted out your Amateur and commercial licenses proclaiming yourself superior because Cheek didn't have an equivalent. But, you failed to play the ultimate card and flaunt your alleged degrees. You couldn't play that card because your so called degree doesn't exist, except in your psychotic mind.

Now I give you another golden opportunity to trump me and even banish me from the scanner newsgroups and what do you do? You run from the chance like the coward that you are.

So why, when you are so hell bent on shaming your critics, do you run from the ultimate triumph? Hmmm, let's see:

A - You can't play the trump card because the degree doesn't exist, that you lied about its existence.

B - You don't care that you can't defend the accusation that you lied about your degrees because you want to keep the turbulence in the newsgroups aflame.

C - You've told the lie so long that you believe your own lies.

D - All the above.

Here's a hint, Toilet Boy: the answer is D, as in dolt, like you.

Just so you remember the original post, here, for your is the message in its entirety for your irritation.

Do you really want to know, Toilet Boy? You can buy the information, if you have the courage to face the truth.

Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

I'll even sweeten the deal. *After* your information is verified,
I'll post my data and then leave the scanner groups forever.

So what do you say, Toilet Boy? Are you man enough and honest enough
to accept this challenge?

Until then Toilet Boy, you are a liar and a fraud.

Cheeks totals were artifically inflated due to repostings from the
messages
you canceled. Not counting the repostings, his totals were in the low
one thousands. That makes you the most prolific poster of off topic
messages of the group.

> > You claimed WD-40 was unsuitable in an electronic application. You lied.
>
> Correct, & I still state the same. What is your point?

You hide the fact that Roy Lewallen, a Technical Advisor for the ARRL
endorsed the usage of WD-40 in electronic applications. Mr. Lewallen is
a Technical Advisor because he is qualified to make such advisements.
You're not a Technical Advisor and you're not even technically qualified
to change batteries in a flashlight, to your unqualified opinion is
useless and verifies your technical stupidity.

> > You claimed Bill Cheek had never been a member of Mensa. You lied.
>
> WRONG! I stated that Cheek was NOT a member of Mensa, I did not say
> that he had never been a member.

Sure you did. If you want proof, find someone to show it to you in
DejaNews. Otherwise, go urinate into the wind.

Actually, you proved it for me: that you're stupid and your mental
illness exacerbates your denial and you can't remember anything that
causes you to face the truth about yourself. Let me remind you:
John Mackey, you are a liar and a fraud.

> > To your dimwitted friend Larry Johnson, two things:
> > First: Not only is the emperor wearing
>
> Why don't you tell him yourself? Are you afraid to send him an e-mail?

I already did, but your mental illness prohibits you from remembering.

I've never claimed to have killfilters enabled. Have you been sampling
Toilet Boy's expired medication again?

> This is an example of his perverted style of self righteousness.

How odd, a Mackey Lackey actually quotes something verbatim and didn't
employ their standard revisionist tactics. Better watch out, you'll
annoy your hero Toilet Boy and fall from grace.

I'm not surprised that you find my position 'perverted.' I'd bet if
this was Nazi Germany, and you were watching the facists arrest your
neighbors in the middle of the night, you'd do nothing. I'd also bet
that when they finally come for you, you'd whine like the coward
Mackey does when someone gives him a dose of his own medicine as
forcefully as he spews his bile.

When it come to ground, especially on a mobile antenna, just remember one thing.....MORE IS BETTER .. That covers it,...chicken wire or fence wire is just as good as metal sheets and you can roll up a good 20 ft section and put it in a closet...be sure to also attach it(the ground wire) to any rails, gutters or what else...good luck ....Murray

From: petervndrs@my-deja.com
Message-ID: <8ni6rheqi1@nnrp1.deja.com>
Source record: 104885

I have two young sons (12, 14) who recently passed the certifcation exam here in Canada. I want to equip them each with a decent handheld (single-band, dual-band?) handheld transceiver and am consequently in desperate need of suggestions and/or opinions. In this part of the world the consensus seems to lie with Icom and Yeasu gear.

I do know that I want a scan function and operation from a charger (some I know will not operate from the charger). I also know that there is a wide price spectrum and have heard that the Yeasu VX-5R is a unit of some popularity (people in one store here say that there is a waiting list).

Any direction on this matter would be most appreciated.

PS: while I have my own ticket I have never operated VHF/UHF.

Sent via Deja.com http://www.deja.com/
Before you buy.

5068. Re: Wire antennas: free lunch?

Well, it seems to me that it doesn't matter in any
event. My S meter reading is only relevant to
comparisons I make at my station. You could
be putting a tremendous signal into my area.
A ham 1 mile away might see your signal at
S 9 +40 if he borrowed my rig. Then drag
my rig back to my station and the signal might
be S6. Same S meter, same source, but 2
different locations with two different antennas.
So whether my S meter is calibrated or not
does not seem all that important. But I would
like the delta to represent some precise figure.
It would be helpful to know exectly how
many db's difference there was between
antennas, or for F/B or F/side measurements.
Actually, I'd like that in digital readout.

And I'm surprised that both you and Tom
don't get 6db per s unit - so much so that
I intend to repeat my test. I trust you guys
enough where it makes me suspect my own
measurements.

Roy Lewallen wrote:

> That makes a total of two rigs I know of which have 6 dB per S-Unit.

5069. vanity calls

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-18 04:23:22 UTC
From: nedlab@webtv.net
Message-ID: <27482-399CBA3A-97@storefull-172.iap.bryant.webtv.net>
Source record: 104888

I've been inactive & out of touch wth Ham Radio for several years. Can someone fill me in on the vanity callsign program?

How does one get a vanity callsign?

How much does it cost?

Do you give up your original call, or do you keep two callsigns?

Does the number in the callsign you choose have to match where you live now?

Does the Call have to match your license class? (1X2, 2X1 for Extra?, etc.)

If anyone can shed some light, I'd appreciate it.

Thanks,

Blair (NP2F)

You can ASSUME anything you want.
However, your data is a year out of date.
the person I know (as "Hawke") isn't with @home.

And, if you bother to look, you'll find that this handle
that is being used is a fairly popular one. However, if you feel
like making a fool of yourself, go right ahead! I won't stop you.

However, since you point out this appearent coincidence, let me
remind you that there are many thousands (if not tens of thousands)
of users on the @home network

jason_hsu,
Your still going to need a counterpoise of some type. A
metal plate just isn't practical on HF, size is the problem.
A counterpoise or two made from wire with a 'neutral' color,
might still be your best bet. Good luck....

Has anyone here homebrewed a SIMPLE loop antenna? I have read a few articles on the ARRL site on loop antenna projects. The loop antennas seem to offer decent performance for an apartment, and the fact that loop antennas are balanced eliminates the need for an RF ground.

I should note that I don't want to buy a soldering iron (due to the fact it is a fire hazard and I don't have a workshop), drill, hacksaw, or other dangerous equipment. Also, I have NO experience in homebrewing amateur radio equipment. Can I build a loop antenna using just simple tools like a screwdriver, hammer, and socket wrenches?

I am a ham and I do business on Ebay all of the time. My problem is people bidding then backing out after the auction is over. They just ignore my emails and do not contact me. I try to believe in the golden rule. I don't want to be taken nor do I want to take anyone else. Your bid is your promise to buy, just like looking them in the face at a hamfest.

73's my fellow hams. I pray your summer is as pleasant as mine.

Your reluctance to use a soldering iron or other "dangerous" equipment will severely limit your ability to homebrew even the simplest amateur equipment. You'll pretty much have to restrict yourself to what you can buy and plug together. I don't see any way you'll be able to build an antenna (or at least any reliable way you can connect it to your radio) without using a soldering iron.

Hi Chip . . . I neglected to mention a couple of key points in my original post. First, the high bidder on the radio I also bid on was the only other bidder, and he was new to eBay. Second, although the auction has been over for at least a month now, the seller who insisted that I was obligated to purchase his radio as second highest bidder has yet to post any negative feedback about the non-paying high bidder. Although I can't prove anything, given the circumstances involved, I suspect a shill auction. It's too bad there are bidders on eBay who don't take their obligations seriously, but the fact remains that other bidders are not obligated to buy an item from a seller if the high bidder backs out. (I would have bought the radio from the seller for my bid price if I hadn't won another auction for the same make and model radio.) Dead beat high bidders are one of the problems sellers must deal with if they auction an item on eBay.

73,
David, KD7FXK

If prone to forgetfulness when having soldering iron on, think of a way to work around it -- could connect it to a timer, for ex. ... (Am very aware of fire safety, being the son of a former fire inspector/fire chief.)

Jason: You could use wire strippers for your only tool, and get some pre-terminated coax, cut one end off the coax, get some hookup wire, and use the wire strippers to strip the wire ends. Then use wire nuts to connect the hookup wire to the open end of the coax: one end of the loop to the center conductor, the other end to the shield.

To the rest of you guys: where's your imagination?

>logarithmic over a wide range, and reasonably temperature stable, isn't.

I think an accurate S meter is much easier with receivers that use DSP
for the last IF stage and to drive the AGC. Here you typically can't
use the analog AGC voltage directly for an S meter anyway, since the
analog AGC is usually being driven based on the pre-final-filtering
signal strength, essentially to keep the input to the DSP's A/D converter
close to full scale. To run the latter control loop the DSP doesn't
require truly logarithmic AGC response but rather only a degree of
stability and repeatability. The AGC voltage to gain response can
be programmed into the DSP based on calibration derived from the
actual characteristics of the amplifiers, whatever these might be.

Since the DSP is doing the last stage of IF filtering itself it will
hence also need to drive the S meter itself based on knowledge of the gain
it is applying to the analog stages plus the measured (digital) signal
strength after the final filtering is done. Since it inherently needs
to know all of this with reasonable precision anyway, an accurate S meter
(calibrated to whatever S-unit standard the manufacturer chooses) seems
to sort of automatically fall out.

Jeff and Jason,

Any attempt to build a small transmitting loop antenna without using a soldering torch or even a welder will be a waste of effort.

The current in a small loop is many dozens of amperes and higher. The slightest resistance in a connection will destroy efficiency.

With big antennas, you can get away with twisting and crimping connections, but not in small loop antennas.

I'd suggest writing yourself a note and posting it several places, saying "my blowtorch is lit" or "the arc welder is on". That always works for my wife when she is cooking. She wanted to give up cooking for the same reason, but the notes allow her to cook food without starting fires.

Actually, quite a bit of homebrewing was done in the 20's and 30's using
Fahnstock clips and terminal and screw connections on a breadboard.
Although there was usually some soldering involved, you could probably
get away with doing none, if you were creative. So, if you are up for
building a 210 TNT rig, you're in luck!

I just installed a Cushcraft A27010S yagi on my tower about 40 ft up. The receiver gain compared with the ground plane is incredible! I am hitting repeaters with 5 watts that I couldn't even hear before.

Now the question arises where are some of the repeaters located. I have the latest ARRL repeater hand book but the following are not listed. These are just the Repeaters I have found on 2 meters East and West. I haven't done a search pointed North yet

If anyone can give me the location of any of these repeaters, I would appreciate it. I am in Pensacola. West of downtown and about 5 miles from the Alabama State Line.

KD7FXK wrote:
>
> Here's my eBay story: [snip]

RESPOSE BELOW WRITTEN TO ALL READERS, NOT JUST TO KD7FXK

Like all auction sites, Ebay does have its share of dishonest sellers and bidders. While I've never sold anything on Ebay, I have had my share of dishonest auctions. These range from sellers suspected of using other user names to bid up prices to merchandise that is less than advertised.

In fact, I just had a bad delivery today. I ordered an item described as an "official service manual from Apple's Service Center. What I got was a photocopy of that service manual, not the real manual from Apple. And, to make matters worse, I bid high because I thought a manual would be a good investment since I have two of the laptops covered in that manual.

After a number of auctions, I have come to a few conclusions that might be helpful to other bidders. First, stay away from guys "doing business" on Ebay. In my experience, I have found that a high percentage of these guys are outright crooks. These are the guys who have a lot of auctions for all types of junk, most of which is being misrepresented or is defective garbage. You can spot them by checking feedback for a large number of "customers" of auctions, and by checking their "other auctions" for a large number of items being sold.

Second, stay away from guys with a lot of auctions with high ticket items (electronics, etc). I suspect that most of this stuff is either stolen merchandise, or garbage picked up through other auctions.

The best auctions are those by private individuals. These sellers usually have a low number of "feedback" comments, and have very few other auctions listed (or only have items listed that an average person would sell). In the end, these sellers are more likely to be honest about what they are selling, and are more willing to work with you if you are dissatisfied with your purchase.

The second best sellers are those who have a business elsewhere (off Ebay). These range from appliance stores to electronics stores trying to find another market for their products. In many cases, these stores were able to get a "deal" on something (factory reconditioned merchandise, for example), and are trying to turn that "deal" into quick cash.

In every case, read the descriptions carefully. Never assume anything. Unless the description clearly says the item includes accessories (power cords, etc), it probably does not. In addition, watch for descriptions that are "artfully" written to mislead the

bidder. And finally, if you have any doubts, it is probably better to move on to other items (ebay suggests asking the seller directly, however you must realise that anything the seller says by email is not binding - ebay only goes off what is said on ebay).

One other thing, don't put too much faith in the number of "positive" feedback comments. Lets face it, the old "there is a sucker born every minute" certainly applies to auctions. In fact, based on the number of "positive" comments left following obviously bad auctions, it seems that a good number of those suckers found their way to Ebay.

And, of course, some people are simply too afraid to post "negative" feedback. Since many sellers will not leave feedback until they see what the bidder has said about them, many bidders will not leave "negative" feedback out of fear that the seller will leave "negative" feedback about them in return.

Of course, an honest seller will leave feedback about the bidder immediately after receiving payment (the bidder has completed his part of the contract at this point). Sadly, there are still many sellers who continue to hold "negative" feedback over the bidder until "positive" feedback is left about them.

In the end, there is really no magic formula for avoiding a bad deal on auction sites. In other words, if you bid often enough, you are going to get taken (bad merchandise, misrepresented merchandise, or others). At that point, all you can do is know the rules, fight back, and hope that you can get out of the deal without losing too much money (or all of you money).

I keep trying to figure out why it is that Republicans promote candidates who may be too unhealthy to serve in the office of President. McCain, for example, has been fighting cancer since 1993. The Republican vice presidential candidate has had multiple heart attacks and a bypass operation. Sort of gives new meaning to the "heartbeat away from the presidency" phrase.

And George W. himself has never confronted the people who claim that he was a substance abuser in his younger years. Instead, he ducked them.

Say what you want about the Democrats, but you don't find sickly or substance abusing candidates on the party ticket. The Democrats did jeer children at their convention (boy scouts), but they seem to be straight otherwise.

This is all very confusing. Democrats jeering boy scouts (children) on national TV after claiming to be the only party truly for the children, and Republicans gravitating toward dysfunctional candidates.

Suppose it's time to elect someone who isn't from either party?

5124. Sheet of metal as a ground plane for an antenna?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-19 03:13:59 UTC
From: jason_hsu@my-deja.com
Message-ID: <8nku1ehml1@nnrp1.deja.com>
Source record: 104838
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I think I have an idea on how to ground an antenna for the apartment HF shack I still haven't equipped yet.

Some of the things I have learned in my 007 mission to obtain the equipment I need to operate HF:
1. Unless I use a balanced antenna (like a loop or dipole), I must establish a good ground/counterpoise. How important this is depends on whom I talk to.
2. In mobile operations, the vehicle itself provides a ground plane. Thus, there is no need to mess around with ground rods or 1/4 wavelength radials.

I am seriously considering using a Bugcatcher antenna at my apartment. Can I use a sheet of metal (or a metal screen) instead of my car as a ground plane? If so, how large and thick must this sheet of metal be? If this setup can work, I can have a good temporary HF installation that I can bring inside when I am not operating. The fact that I live on the ground floor with no bushes or trees to conceal wires means that I cannot have an outdoor antenna that is sufficiently stealthy. The alternative seems to be a temporary installation that I keep outside only for the few hours per week I expect to operate.

Turn the engine off! :)

What type of noise are you hearing? Does it vary with engine RPM's? If it's a whine, that almost sounds like a siren as the RPM's increase, it could be from the alternator. If it's like clicking static at low RPM's, it could be your ignition system, spark plugs. Also, some of the new car computers make a lot of noise, but I don't know what it would sound like.

You can get special shielded high voltage plug wires, resistor plugs, alternator filters, etc.

I just got my tech license and am looking to get either the Yaesu FT-8100R or FT-90R. It is my understanding that only the FT-8100R will do "cross band repeat." Is THAT a big deal??? My complimentary issue of QST Magazine that come soon after my license arrived as an article about the UO-14 satellite repeater which would require a cross band radio. Is that (UO-14) an important feature??? Are there other features in either radio that should dictate which one I get?? One comment I read on the FT-8100R said that it does not have direct frequency keying or a tone scan...are these features important?? Any suggestions are sincerely appreciated. :)

No doubt that the internet is more attractive to many and ironically for some of the same reason Ham Radio had it's popularity. While the Code is a obstacle for many there is some satisfaction to learning it. True in today's society and technology it is a dinosaur but God forbid if it ever comes to the need to know it as if that happens then it will be an event like the sunken Russian sub. I don't think it should be required but only for the top Ham Licenses and then the reward for it should be increased bandwidth in the CW bands which in my opinion should be shortened and voice bands enlarged if possible. I don't agree with doing away with the code but all voice privileges should come with theory and rules and regulations rather than code requirements. 5 Words per minute isn't or shouldn't be enough to stop someone but voice privileges should come with theory and rules not increased code.

Will Ham Radio be obsolete ? who knows could be and the pool is dwindling but not beyond being turned around.

It actually does help in some sense. It helps answer the (mostly
academic) question of whether manufacturers build useless S meters
because it is too hard to build accurate ones, or whether they build
useless S meters because the manufacturer doesn't give a crap about
the accuracy of the S meter. With the final IF implemented with DSP
I don't think the problem is that it is overly difficult to build an
accurate S meter.

>S9 - S9+20 13.0dB
>+20 - +40 22.1dB
>+40 - +60 17.9dB

This is neat. I can think of two obvious methods that could have
been employed to achieve this result. They could have gone to the
trouble of explicitly programming the DSP to produce S meter readings
that are compatible with their previous products, or they could have
just left the S meter attached to the analog AGC circuit. In the
latter case the S meter may now be responsive to signals outside the
digital passband, making it even worse than it was before.

In any case, I don't disagree that most S meters are mostly useless.
I was only commenting on the relative difficulty or ease of making
them useful.

If my exchange with the eBay seller who insisted that I was obligated to purchase his radio was as pleasant and friendly as your description, David, then there would be no reason for either party to consider himself ill-used. Unfortunately, my exchange was anything BUT pleasant and friendly, since the seller resorted to accusing me of being a "deadbeat bidder" (among other things) when I politely declined to purchase his radio after the high bidder backed out. As others have said, caveat emptor.

It was not a planket statement, TooMany. I said that a "high percentage" of these guys are "outright crooks," not that ALL of them were. Sorry if that opinion offends you, but that has been my experience.

And, you're certainly free not to "buy it," TooMany. I was just offering my opinion based on experience and observation. People are free to take that for what it is - an opinion.

I'll say what I want to about my degrees and there isn't a bloody
thing you can do about it.

You're still avoiding the main point, Toilet Boy. I'm your harshest
critic and you have the means at your fingertips to silence my voice
about you forever. Yet, you run like the scared coward that you are
from the chance. You lie to the people on the Internet about yourself
and you lie to yourself about you. That's why you run from this
golden opportunity and want to deflect attention from the fact that
you don't have the degrees you claim and you can't face the lies
about yourself. You avoid this because you are a coward and can't
face yourself.

Here are the terms again, just in case you develop the intestinal
fortitude to face yourself. So, show us, Toilet Boy, are you man
enough to face yourself?

Here's the deal: When you post the proof of your alleged degrees
AND it's verified, I will post the information about my psychology
degrees.

I'll even sweeten the deal. *After* your information is verified,
I'll post my data and then leave the scanner groups forever.

John,
you seem to lack a certain amount of computer prowess here.
do you have any idea how easy it is to use a news browser
that can "munge" headers?

Why don't you go over to alt.hacking or alt.binaries.hacking.beginner?
There are guys there than can show you just how easy it is to make the
headers look like they are coming from one place.

The IP listed in the "nntp posting host" can be easily put there by any number
of software packages designed to do bulk e-mails and mass messages.

In fact, given @homes use of an internal proxy, it is very easy to post
in such a way where it appears that someone is posting from here,
when, in fact they have posted from somewhere else insode of @home.

It isn't that hard. In fact, you can be spoofed is just the same way
(your IP:24.0.49.240) can easily be placed within a anonymous posting
through cotse.com (and be made to appear from litterally anywhere
in the @home system). Now, do you really want to push this point?

and now begins the harrassment John Mackey is so well known for.
First, he will insist that I am lying, then he will trot out more messages
showing the same nntp posting host (its real easy to do considering
that the ip listed happens to be a shell account in Phoenix on a unix box)
then he will clip and cut to make it appear as though I said one thing,
when in fact, I said another.. ad nauseum.....

I won't bother to argue, mostly because I don't have the time for it
(I am in the middle of setting up a cybercafe' in downtown and won't
have the luxury of time to sit here and banter back and forth over who
did what and where.)

So, you go right on doing what you do John. I could really care les.
I thought I would point out to all the others in here that you have a
long history of repeating all your mistakes.You just won't let it go.

Now I am telling you: let it go, before you really do lose your account.

>to sort of automatically fall out.
>

...and yet it doesn't seem to help.

These are the results for the new IC-756PRO, taken from an RSGB lab review (values below S9 are averages of measurements taken every 2 S-points):

S1-S3 1.9dB
S3-S5 2.6dB
S5-S7 2.5dB
S7-S9 2.4dB
S9 - S9+20 13.0dB
+20 - +40 22.1dB
+40 - +60 17.9dB

Don't take the figures behind the decimal point too seriously, but the message is clear enough. Whatever the other merits of the IC-756PRO receiver, the S-meter is hopeless as a means of measuring anything. But it does have a "lively" S-meter, so that's OK.

Tracking this problem through previous generations of Japanese rigs, there was a brief time when the difference between S9 and S9+20 was actually pretty close to 20dB. Now it seems even that has gone.

This is a lost cause - it's time to shrug our shoulders and get over it.

That's very good advice. Jason, you're being over-timid about what you can do safely with a soldering iron and hand tools. The greatest danger is that you'll back yourself into a corner where you can get very little satisfaction out of amateur radio.

To get a more realistic picture of what you really *can* do - even from an apartment - follow George's advice. Better still, seek out a radio club and meet *several* hams!

Forgive me, Gary, but you're missing the point of this particular thread. It isn't about how a resourceful, experienced ham can build a whole antenna farm using kitchen scissors... most of us know that, and could do it .

It's about helping a hesitant newcomer to realize that he *can* safely use normal electronics hand tools in an apartment - and especially a soldering iron.

Actually he asked if he could build a small transmitting loop like in
the Handbook without soldering, by only using hand tools.

That idea is impractical, because of the high currents in the loop he
described. He would need to use aluminum and heliarc, or copper pipe
and (yuk) solder, R rad is extremely low in that antenna. Even
conventional capaciators will fail.

What can you expect from engineers who think weight is the ratio
between dot length and dash length?

If they can't get the keyer correct, they sure aren't going to do the
S meter correctly.

It IS possible to build a loop without a soldering iron. As I see it, the only time when you need one is when you connect the capacitor required for the fine tuning part of it.

But why be afraid of using soldering iron? It is NOT dangerous at all. The thing that may be "dangerous" (?) is to inhale the led smoke while working with it. I think this discussion has gone a bit too far. What might be even more dangerous is all the different radio equipment you may come across while being in the hobby of SWL or Ham radio (or both). Common sense works very well in all cases and also - "what you haven't tried can't be dangerous before you have discovered how easy it actually was".

Ian, with a lab-measured range of only 62 dB between no indicated signal and receiver overload point, either the receiver under test was stone deaf to signals which would blast through an ordinary receiver well above the band noise, or the RSGB lab is too incompetent to undertake such trials. There's at least 40 dB missing from somewhere.

If the lab reported very little wrong with the receiver then the latter explanation best fits the circumstances.

Reg.

Dear Reg,

If you measured some actual S meter's, you'd find they do not start
moving at noise floor.

I was working on a transceiver just yesterday, measuring the receiver.

While the receiver could hear a CW signal at -140 dBm, the S meter did
not budge until -110 dBm or so.

Hope this helps.

Thanks for that insight on weight, Tom. I am working on a contest logging program and thought that that weight was the ratio of dot & dash/3 length.

I looked it up, and I believe that it is the ratio of dot to (dot + space) length.
Dash remains 3 times the dot length.

That should help improve the sending of the program. The web page for the program
can be seen at:
http://tomwagner.home.mindspring.com/n1mm.htm

Take a look, you might be interested.

Mike here is another resource. Try looking at www.artscipub.com and look at
the repeater listings for florida. They have a pretty good list there. It may
be that you are hitting some in several directions at once. I have one of
those beams up as well and it has some pretty good lobes off at strange angles
from the antenna. The band has been open pretty good across the state so there
is no telling without asking where they are ask and you might be surprised to
hear your into Tampa, Miami, even Jacksonville or off the back side into Mobile
AL or even into Atlanta. 5 watts can go a long way from even a small beam when
the band is open.

Always ready to believe the worst of other people, aren't you?

If you took the trouble to read the review yourself, before telling us
all about it, you would find that:

10dB S+N/N = 0.16uV
S1 on the meter = 1.6uV (both figures on SSB, 7MHz, preamp 1 in)

In other words a signal has to be about 30dB above the noise floor
before the S-meter will move past S1.

At the strong-signal end of the range, a receiver's performance will
degrade in several different ways, each defining its own separate
dynamic range above the noise floor. None of this has anything to do
with the S-meter having gone to maximum.

So the problem is entirely with the S-meter, not the rest of the
receiver... and it's certainly not with the RSGB reviewer, G3SJX, who
knows exactly what he is measuring.

Hi Tom

I don't think my Benton Harbor Lunchboxes came anywhere near 100 amperes, hi hi......

Even my biggest rig an HW-101 with approx. 100 watts out wouldn't come anywhere near 100 amps, more like 1.1 amp tops, unless ohm's law is really screwed up.

I also think the clips would outlast the 26 guage copper magnet wire as well.

Hi Ian

Some fears are quite REAL, no matter how rediculous they may seem to others, or sometimes to your own self.

Since I'm the scapegoat here today, I will use myself as an example. At one time (pre-35) I had so little fear of height that I had a part-time job replacing the lights on broadcast radio/tv towers. Once I crossed that 35 mark, I either wised up some or decided the best place for my feet were on the ground. However, I still had no fear of height.
Then when I was around 48 years old I had an accident, a new commercial ladder snapped and I fell over 35 feet to the ground below. I was not seriously injured, or at least I didn't think so, but something psycological snapped.
The next time I climbed a ladder, my hands froze to the ladder at about the 12 foot point. Being of sound mind I tried to climb back down the ladder, but my hands would not let go of the rungs. I'm even standing there talking to myself, boy this is stupid, let go you dang hands. They wouldn't! I finally took my feet off the rungs and just dangled by my hands, thinking they would tire eventually and let me drop to the ground. They didn't. Eventually, someone called the fire department who tilted the ladder over, when my feet touched the ground, my hands let go.
A little experimentation proved that I could go about 10 feet with no problems, over the course of a few years, that 10 feet had lowered itself to 8 feet. I even went to a shrink a few times to discuss the problem with him. In my line of work, it was a serious problem.
About 4 years ago, it happened again at only 6 feet, and I went through the dangling routine for over an hour with the tips of my toes touching the blades of grass on the ground and my hands would not let go, until someone tilted the ladder enough that my feet were planted on the ground. Needless to say, I was embarrassed moreso than ever and decided to retire from that field completely, before I was laughed out of it.

Now if our friend has a real FEAR of a soldering iron, it could be simply from lack of knowledge of the device and can learn it's safe operation, or it could be a real instilled FEAR that may prevent him from ever handling a soldering iron.

In either case, having a knowledge of the alternative methods at his disposal would be more beneficial than offering none, other than learning to use a soldering iron.

FWIW - we have built whole chassis using nothing more than a wire-wrap tool and no solder ever touched the entire radio. I know those days are long gone now, but it was still an alternative method.

5167. KV4FZ to appeal to US Supreme Court

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-20 00:00:00 UTC
From: Porkeyus buttucocks <b9erea33@supermail.com>
Message-ID: <DyRn5.3759$Nz4.197068@newsread1.prod.itd.earthlink.net>
Source record: 104810

KV4FZ FILES LAST-DITCH SUPREME COURT APPEAL

In a final effort to renew his Amateur Radio license, Herbert L. Schoenbohm, KV4FZ, has petitioned the US Supreme Court. Schoenbohm told the ARRL that his request to the high court to grant a writ of certiorari was accepted for filing on August 1. It calls on the justices to request the record of his case from the US Court of Appeals for review.

"Until I hear from the Supremes, I can stay on the air," he said. If the Supreme Court declines to hear his case, however, Schoenbohm's interim operating authority immediately disappears without further notice from the FCC.

Schoenbohm concedes his chances of getting the Supreme Court to review his case are small. "The courts today rarely, if ever, overturn the decisions of administrative agencies, who have become a power unto themselves," he said, referring to the FCC.

The FCC has cited Schoenbohm's 1992 felony fraud conviction and character issues in refusing to renew Schoenbohm's ticket. Subsequently, the FCC said that Schoenbohm had improperly solicited ex parte contacts with the FCC on his behalf. A federal Appeals Court turned down Schoenbohm's request for a rehearing by the full bench after rejecting his appeal of the FCC's decision to not renew his Amateur Radio license in February.

Among several issues raised in his Supreme Court filing, Schoenbohm asks the court to review whether the FCC's imposition of a broad character standard is "arbitrary, capricious, vague and thus unconstitutional." He also wants the high court to look into whether the FCC violated its own rules by basing its action on a crime that was not serious enough to trigger denial of his license renewal application. Elsewhere, he accuses the FCC of abuse of process and further suggests the Commission abused his "civil and individual rights." Schoenbohm concludes his filing by claiming that he is "the first ham in the history of ham radio to lose his license for reasons of 'character'."

If Schoenbohm is successful in getting the high court to review his case, it would not be heard until the court's next term, which begins in October.

------- cut here ------ end of transcript ---------

(I will tell you readers EXACTLY what "Herbie Baby" is up to. If the US Supreme Court
refuses to hear his appeal you can *take it to the bank* that Herb will apply for *another
callsign* from another Country. Probably Belize or Mexico or Cayman Islands or another

such place that issues ham calls like there's no tomorrow with no
background checks.
Then Herb will be on the air with HIS NEW CALL once KV4FZ is "officially
retired" by the
FCC. Expect to hear XE2FZ or VP1FZ or ZA?FZ. This guy lives for ham radio
and he
will NEVER go away from 14.313 or 14.300 An that my dear reader is the
truth.)

OK.

Hamfests: Attendance is way down across the board. Dayton down by 3000

Radios: Still way way overpriced for what is inside. Dealers cryin the blues
Inventory not moving, esp HF rigs. Who in his right mind would
spend
$1500.00 (or more) for a HF ham radio, which inside is put
together no better
than a $85.00 Korean VCR? Put that cash towards a new car or
a vacation
in Europe.

Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
month. No new
people (young people - meaning the target market of youthful
white males)
comming into the hobby. Who wants to bother stringing up
antennas, learning
stupid morse code and paying average of $1100-1700 for HF
gear - just to talk
to a bunch of old men?? Young people want the INTERNET. Ham
radio is
both obsolete and humorous in it's self-admiration and
self-serving imagined
importance in the scheme of things.

Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 mHz will
have been
allocated to emerging wireless technologies before then, around
2005-7.

in short: STICK A FORK IN IT FOLKS - THIS TURKEY IS READY FOR CARVING!

Sounds like somebody who's upset because they couldn't pass a test upgrade so he's stringing about some sour grapes.

One thing's for sure, if the number of people dwindle, it will be a fact thrown right in the face of the p.c.t (pro-code test) crowd that has been hollering that the bands will just fill to the brim with low-class people. It's funny how everybody who has a view or an angle on the hobby casts predictions to support THIER belief, and it generally conflicst with not only other's of the same sort of negative tripe but often has no basis on reality OR in current market trends.

Go back to your t.v. and turn on your sony playstation. Make the little man jump over the cute little flying boxes.

I don't think that its the case. What he stated are pretty much facts
that have nothing whatsoever to do with the "P.C.T.". I hear this from all
over the hobby, pro and anti-cw. Fact is, for years you could enjoy hf with
a 5 wpm cw test. It hasn't saved the hobby. Don't get me wrong, I have
supported a lowering of the cw requirements to spur some growth, but there
are too many other factors that will contribute to the "death" (whatever
that may be) of ham radio.
Anyways, for a simple written exam and a relatively easy 5 wpm cw exam,
anyone can enjoy most or all hf priveleges now. If ham radio dies at this
point, the P.C.T. crowd is not to blame, the blame I think should rest on
all of us for not promoting the hobby more.

Ohm's law is fine. You have just not paid attention to what antenna was described.

In a small loop, current can be hundreds of amperes with 100 watts.

5173. CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-20 00:00:00 UTC
From: Warning-Warning@scrambvlr.net
Message-ID: <10621407E.juedffbfu@ltucpoxuyyk.edu>
Source record: 104816

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-
I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.
-

This is true, but don't rejoice, it is indicative of all radio related hobbies, including scanners!

>Radios: Still way overpriced for what is inside. Dealers crying the blues
>Inventory not moving, esp HF rigs. Who in his right mind would spend
>$1500.00 (or more) for a HF ham radio, which inside is put together no better

>in Europe.

You forget one thing: economies of scale! If manufacturers of ham equipment sold as many rigs as they did VCRs, then the price would come way down-it's basic economics.

> Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
> month. No new people (young people - meaning the target market of
>youthful white males) coming into the hobby. Who wants to bother
>stringing up antennas, learning stupid Morse code and paying average
>of $1100-1700 for HF gear - just to talk to a bunch of old men??

Morse code is now limited to 5 wpm which you could learn in a no time. Granted, CW should have been deleted from the requirements but the regulations change at a snail's pace.

>Young people want the INTERNET. Ham radio is both obsolete

True, even hams love the Internet, no secret there. And yes, it is obsolete, we're doing the same thing we did 30 years ago exactly the same way. No technological advancements.

>and humorous in it's self-admiration and self-serving imagined
>importance in the scheme of things.

Here you show how envious you are. Looks like you would love to be a ham-if you could only pass the test!

> Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 MHz will
> have been allocated to emerging wireless technologies before then, around
> 2005-7.

You can probably say that about all radio related hobbies.

Roland

>length.
>Dash remains 3 times the dot length.

The weight is the ration on on time periods to off time period. One
time period makes a dot, three periods make a dash.

So the ratio of "transmit time" to "off time" changes, but the ratio
of dot length to dash length remains contant.

In early keyers, that was accomplished by changing the threshold
point of a triangle wave triggering system.

ICOM changes the ratio of dots to dash, which is totally useless, No
CW operator in his right mind uses anything but a 1:3 ratio between
dot and dash.

It is the 1:3 to X ratio that should change with weight control. Less
weight is desirable at high speeds when the BW of the signal
approaches the BW of the filters, and more weight is better at slow
speeds especially with weak signals.

>That should help improve the sending of the program. The web page for the
>program
>can be seen at:
>http://tomwagner.home.mindspring.com/n1mm.htm

I'll have a look at that.

Hi, Jason:

I made a loop that tuned as low as 80M by forming around 20 pieces of #12 copper wire, each 27 ft long, into a polygon approaching a circle. I brass-bolted opposite ends of each wire to a capacitor formed by 2 brass plates about 2ft square.

I fed the thing with a link experimentally-determined to be a piece of #12 wire about 5ft long, centered opposite the capacitor, in a rectangular shape inside the main loop.

The supports were of white PVC tubing -- you create a shape that suits you.

All the stuff came either from hardware stores, electrical-supply houses, or plumbing-supply houses.

You can use small wire clamps to attach the coax to the ends of the link.

Now come the warnings:

This thing can be analyzed as a series-resonant circuit, and the only thing that limits the current in a series-resonant ckt is the operating-frequency-resistance of the components, and, in this case, the radiation-resistance of the loop. For the antenna to be efficient, this o-f-r has to be low, because, in the scheme of things, the rad-res of such a small antenna is already quite low. To get an idea of how low, with 100W, 100 A or more will flow in a well-designed loop. It flows through the reactances of the capacitor and the loop/inductor. It will take maybe 1200pF to tune this thing to 3.5 MHz, which capacitance has a reactance of -j30 ohms. Multiplying 100A by 30-ohms, we get 30KV (WARNING!) across the plates of the capacitor. Now, you can see why large plate size and wide spacing is a requirement, as well as low-loss supports for the plates.

If your eyes are not glazed over yet, you tune this beast to resonance by varying the spacing and overlap of the plates, and for usable VSWR by fiddling with the size, shape, and placement of the link. If you're interested in fine-tuning, get a slab of good dielectric material and insert it between the plates. I used teflon, plate glass, polystyrene.

Another warning: resonance isn't easy to find, cuz the Q of the thing is REALLY high, if built properly.

Your patience and perseverance WILL be tested.

Look at it this way: you didn't have to solder a thing!

Seriously, GL, and gimme a shout for additional consulting, if you wish.

73, Dave, K3BHJ

Been there too (sat down from about 40ft) and *was* seriously injured -
lucky to be alive and lucky to be walking. Looking back, I'm also very
lucky not to have been left with a matching set of psychological scars.

If a bad experience does triggers something psychological, that's
certainly not a matter for personal guilt or blame. As you say, there's
not a thing the conscious mind can do to avoid it. (There are some
effective ways to get out from under this stuff, but those are outside
the scope of these rec.radio.amateur NGs.)

[...]

>Now if our friend has a real FEAR of a soldering iron, it could be
>simply from lack of knowledge of the device and can learn it's safe
>operation, or it could be a real instilled FEAR that may prevent him
>from ever handling a soldering iron.
>
From the original posting, it seemed specifically like fear of the
unknown:

>>I should note that I don't want to buy a soldering iron (due to the
>>fact it is a fire hazard and I don't have a workshop), drill, hacksaw,
>>or other dangerous equipment. Also, I have NO experience in
>>homebrewing amateur radio equipment.

However, he does feel confident enough to set about using a hammer, screwdriver and socket wrenches, so that's a good sign and something to build on.

I think the way to approach this particular fear is by offering gentle but *positive* encouragement - in this case, to find someone to introduce him to those tools he hasn't yet met, and show him how to use them safely.

Tom, you will be happy to know that Kachina got it right!

The weight control alters the ratio between dot length and dot+space length. There is also a "dynamics" control which sets the slope of the leading and trailing edge of the keyed waveform.

I haven't gotten into the details yet, but the Kachina "S meter" provides a choice of scales in dbm (from 0 to -124), microvolts, and "S" units. The scales are quite linear on the display and seem to make sense compared with received signals as seen on the nearby IC-765 receiver.

Remarkable radio - and the dot:dash ratio remains at 1:3 at all other settings of the keyer.

Hi all,

I have a Delco radio from a 1990 chev...I would like to use this radio
for AM dxing as it had an excellent reciever when it was in the car.
Can anyone tell me the pin outs on the back where the
electrical/speaker plug goes in? I want to use 12volts from my astron
and headphones for speaker.
Thank you for any help.

The most discouraging part of the keyer in my 706 Icom, and other Icom
radios, is when I brought the fact they messed up the weight control
to the attention of Icom an employee said "who cares, no one works CW
anyway".

That being the case, why put keyers in the radio?

> John, you seem to lack a certain amount of computer prowess here.
> do you have any idea how easy it is to use a news browser
> that can "munge" headers?

Eric, it isn't as easy as you would like to make people believe. The NNTP server
marks which posting host made the post. Login & authentication is not nearly as easy to
spoof as you are attempting to state.

> The IP listed in the "nntp posting host" can be easily put there by any number
> of software packages designed to do bulk e-mails and mass messages.
> In fact, given @homes use of an internal proxy, it is very easy to post
> in such a way where it appears that someone is posting from here,
> when, in fact they have posted from somewhere else insode of @home.

So prove your theory Eric, spoof me, you have my permisssion to do
one single test which will be clearly marked as a test.

BTW - @home does NOT use internal proxy for everyone, and that is
why they give directions for static IP info for their users on their web site.
To verify that click below:
http://home.com/support/ie/troubleshooting/netsettings/95sticker.html

> It isn't that hard. In fact, you can be spoofed is just the same way
> (your IP:24.0.49.240) can easily be placed within a anonymous posting
> through cotse.com (and be made to appear from litterally anywhere
> in the @home system). Now, do you really want to push this point?

Yes I do want to push the point Eric. If a post was made via cotse.com
then the header info will still look TOTALLY different. For example, see
below the header info for a attempted trouble making post that recently came from
cotse.com. Compare it to the header info from YOUR posts earlier originating
from the @home system.

Just so I'm sure I have it right, 100% weight is no time off
and 0% weight is no time on. At 33% weight, the dots would
be separated by an off period twice as long as the on period.

I.e. weight = dot length / (dot length + space between dots length)

I think you can safely say that things aren't going to change much in the forseeable future.

While the total US ham population has been fairly constant(around 670,000-680,000) in recent years, there has been a slight decline in respect to overall percentage. However, at the current rate of decline, there won't be a noticable dent in the overall percentage of the number of hams in any of our lifetimes.

Another reason that there won't be much change is that, in general, the current average ham is very much opposed to change of any kind. For example, take restructuring - many argued until they were blue in the face that it would be the end of ham radio, or that it would unleash a horde of CB minions on the HF bands, or that it was "dumbing down" the hobby. They, of course, have been proven wrong on all counts. In fact, nothing much has changed at all. So, you see, if it takes THIS much effort to institute a policy that doesn't have much effect at all - imagine what effort it would take to institute a policy that would have an effect.

Note, there has been a noticable shift in the overall percentage of the number of NoCode Technicians, and due to the passing away of a number of the more seasoned Amateurs, this has led to a slight shift in focus towards more modern communications modes(digital, spread spectrum), and on the higher Amateur Bands(VHF/UHF). I say slight, but don't expect any rapid change here either.

One thing that would have an immediate effect, is to increase the number of young people involved in the hobby. Unfortunatly, we seem to be going backwards here. You see, with restructuring, and the elimination of the Novice class license, the FCC has actually made it MORE difficult for a youngsters to enter the hobby. I have proposed an introductory VHF/UHF-oriented youth license to replace the lost HF-oriented Novice license - but, in general, it has been bitterly opposed by those on this newsgroup. However, I have received a reasonable

level of support from the non-vocal majority. I hope that the FCC has the good sense not to listen to a bunch of vocal, bitter old men, and will think of instituting some kind of change that WILL have an immediate, and beneficial impact to the hobby.

Hi Jason

Back when I lived in an apartment, I had a loop in every room, some that even encircled the perimeter of the whole apartment.
All of them were totally invisible, even to the eagle eye of the landlord.

Even nicer, they didn't require a single tool, other than a scissors and you could have done without that too!

All I did was put up copper self adhesive foil under the ceiling on the wall. I used copper so I could solder the coax to it easier, but you could use aluminum tape and a small screw to affix the coax. Once it was taped up, I just painted over it and it became invisible. I ran the coax down the corner bead and covered it with caulk and tucked the rest under the baseboard behind the carpet tack strip to the shack.

I did drill holes in the walls and in some cases cut a groove in the corner to hide the coax under the drywall corner then retaped and jointed the corner back to square for the perimeter run.

I would urge every Ham operator that cares about protecting our spectrum space not to vote for Al Gore. In the past, Gore has seemed to become buddies with the big telecom companies when it comes to offering them spectrum space that they need to fill for their new radio needs, such as cellular services. It's no surprise that the cellular spectrum is slowly becoming crowded more and more, and as wireless services, such as wireless internet become more readily available and cheaper, the bandwith for these services is going to grow smaller and smaller. It seems some of these big companies like Motorola have Gore in their back pocket. The highest bidder is going to get the "unused" spectrum. This may seem silly, but some of these lobbyists could start looking at the VHF and UHF portions of the ham bands that are supposedly "unused" as a good place to set up shop, if the price is right. We could also even see our HF spectrum dwindle if we don't keep an eye on it. Gore is not a friend to the ham operator, just my opinion. Also an aside. Am I the only one that thought Gore's daughter's speech the other was a joke? It looked like one of the most scripted speeches I have ever heard! She just seemed uncomfortable and full of crap to me. It was obvious she was trying to attract young voters by "convincing" them that her daddy was the nicest and sweetest man in the whole wide world because he once helped her and her friend build a snow igloo when she was a little girl and brought them hot chocolate, helped her with homework after a long day on the Senate floor... Aren't all dads supposed to do that? Why does this make him any more qualified to be President? She was trying to appeal to the MTV crowd, much like Clinton did in 92, that's one of the reasons I voted for him in 92 after I had turned 18 and could legally vote. If I had known then what I know now! Gore, much like slick Willy, can't be trusted. Think about this in November when you go to the polls. Just my two cents.

>misrepresented or is defective garbage. You can spot them by checking
>feedback for a large number of "customers" of auctions, and by checking
>their "other auctions" for a large number of items being sold.

How can you make a blanket statement like this? Do you also assume that guys
"doing business" in other venues are also "outright crooks?" If a guy is
running a legitimate business on eBay, he is MORE likely to be honest and deal
fairly with you vs an occasional seller who has neither the time nor the
interest to tend to run auctions on a full-time basis.

> Second, stay away from guys with a lot of auctions with high ticket
>items (electronics, etc). I suspect that most of this stuff is either
>stolen merchandise, or garbage picked up through other auctions.

Again, where do you get off making a blanket assumption like this? Just
because an entrepreneur chooses online auctioning as his venue-of-choice means
he is likely to be selling "garbage" or "stolen merchandise?" Sorry, but I
don't buy it.

Jason, I get the feeling that you are really not all that familiar with the operation of soldering. Perhaps you are equating it to arc welding or some equally spectacular process.

To the contrary, most soldering of electronic equipment and components is noiseless and extremely safe provided that only common sense precautions are taken. I have been "flogging solder" as we used to say for over 55 years now and cannot yet show you a single burn scar. And I started back in the days when a 100-watt iron was considered "delicate" and for small work. The big iron for the regular stuff was 250 or 350 watts and weighed a few pounds.

No, I think that you need to visit a ham or even an electronics shop and observe in person what soldering amounts to. I suspect that you will find it to be a big anti-climax to what you might be expecting.

Hang in there!

I forgot to tell ya
Check the list below & see how you rate. Then let me know.

I, as a good democrat, believe

a. that Margaret Sanger & Gloria Steinmen are more important to American history than Thomas Jefferson, Robert E. Lee or Thomas Edison.

b. that standardized tests are racist, but racial quotas and set-asides aren't.

c. that homosexual parades displaying drag queens, transvestites and bestiality should be constitutionally protected while manger scenes at Christmas and the 10 Commandments in your classroom should be illegal.

d. that AIDS virus is spread by lack of federal funding and not lifestyle.

e. that global temperatures are less effected by cyclical, documented changed in the earth's climate and more effected by yubbies driving SUVs.

f. that the NRA is bad because it supports certain parts of the Constitution, while the ACLU is good because it supports certain parts of the Constitution.

g. that taxed are too low, but ATM fees are too high.

h. that the military, not corrupt politicians, start wars.

i. that self-esteem is a gift to students from teachers and not something that is individually earned.

j. that hunters don't care about nature, but activist "greens" do.

k. that businesses create oppression and government creates prosperity & jobs.

l. that capital punishment is evil while abortion on demand at any point in pregnancy is good.

m. that gender roles are artificial but being homosexual is natural.

n. that guns in the hands of law-abiding citizens are more of a threat to your safety than nuclear weapon technology in the hands of Chinese communists.

o. that government knows how to raise your children better than you do.

p. that Al Gore invented the internet.

Virtually anyone can be a democrat. Just quit thinking; and then, vote that way.

AlGore.

It seems that some people here think I have a soldering phobia or that I have never seen a soldering iron. I want to set the record straight and put the flames I accidentally provoked to rest. (Well, at least it's better than the other flame wars infesting these newsgroups.)

The truth is that I SAFELY used soldering irons in a laboratory class at the university. As far as I know, nobody started a fire or was burned. But the laboratory was a far better place to use a soldering iron than the apartment I live in now. Unlike my apartment, the lab had big countertops and a tile floor rather than carpet. If I had a house with a garage or a workshop, I would probably have bought a soldering iron by now. Since this is not the case, I must either borrow someone else's soldering iron and workshop (not as convenient as having my own) or find an alternative to soldering (such as clips).

Hi, I have a question about antennas. I have an ICOM IC-746 transceiver and I will be getting a combination 2/6/70cm antenna made by diamond antenna, and also the TITAN DX from GAP antenna. My question is about grounding them. I live in Las Vegas, Nevada and live on the side of a mountain so the ground is extremely hard. You could only dig down 6 inches with a shovel before you needed a pick. I have been told that I need to drive an 8 foot ground rod into the ground. Since going down that deep is practically impossible, I was wondering if 4 feet would be sufficient? Also, where do I attach the ground wire to on the antenna? Do I attach it to the tripods they are mounted on, to the mast next to the antenna, or somewhere on the antenna itself, or all three? Another question I have is where do I place the lightning arrestor in the coax line? Is it placed as close to the antenna as possible, or inside the house close to the transceiver? I have one last question. Since I will be using TWO antennas, I will be using two coax lines for both of the antennas. Both of the coax lines will be 100 feet long, BUT is it ok to have the coax lines right next to each other or does there need to be some separation between the coax lines as I mount them along side the house? I will only be using one antenna to transmit at a time, so I was thinking I could keep them next to each other, but if you don't think I should, please tell me. Thanks so much for taking the time to read this and answer my questions,

-Pete

Hello, I read the original post on the rec.radio.shortwave group. I am new to the hobby of SWL and one of the first things I tried to listen for was radio amateurs. Needless to say, I only understood about half of the conversations, due to my own technical naivete. I have always been interested in amateur radio, but the cost and technical rquirements were always daunting to me. I had a taste of things back in the 70's-early 80's when I was quite the CB afficinado- Browning Golden Eagle, Moonraker 4, D104, and an illegal 300 watt linear amp- the whole shebang. It was an exciting hobby for a teenager, and the best times I had with it were the times when propagation was good and I had the fun of working stations in the Carribean, and other distant places.

CB has always been amateur radio's black-sheep stepchild, but the technical things I did learn from it were very rewarding to me. One observation that I might make regarding amateur radio: The tech-types always seemed in the majority, and that's Ok, but many that I came in contact with seemed a bit irritated when it came to sharing their knowlege. There seemed to be an exclusivity about the hobby that made it hard to break into.

Many of the observations that I have seen on this thread have been well thought out and honest, and frankly others have had the tinge of the "old boy" club about them that I have found difficult in the past. I am hardly an expert, but here is my suggestion for what it's worth: Promote the hobby. Make it accesible, and be kind to those of us who know very little about technical matters. We all had to start somewhere. We are willing to learn. Accesibility, in my opinion, probably has far less to do with code requirements and bandwidth allotments than it does with those who are into the hobby making it easy for others to join the club.

For radio amateurs who care- be an evangelist! Get others excited, and be willing to answer questions. Help those who are interested to feel the same excitement that made amateur radio a rewarding part of your life in the first place, and the future will take care of itself. Thanks for hearing me out.

Kind Regards,

Larry Pritchard

You have a problem in two parts:

a) the rf side. Run your coax side by side or whatever else you feel to be neat. The antennas will couple far more be being near each other than by anything you could do with coax. On the rf side, put up the antennas, run the coax, get on the air and have fun. Lose the arrestors entirely. Grounding is not required to radiate.

b) the lightning and assorted stupid occurrence problem. There is no doubt that your electrical inspector would prefer to see the antenna structures coupled firmly to a swamp; so would you. He doesn't even like ungrounded radiators, preferring folded elements. Neither of you are likely to get what you want on rock. Some things are lived with.

Having said that, don't be stupid about it. The electrical code prefers grounded structures for two major reasons:

a) should a power line, phone line, etc. come in contact with your structure, having it well-grounded simply causes fuses to blow and a lot of people saying 'aw, shit'. By providing better paths to ground than the human

body, the fatality level is kept to a gentle, ladylike belch. If your ground stinks with or without a rod it certainly makes a lot of sense not to hang things in proximity to power and phone stuff.

b) it is generally desirable to provide lightning with a better ground path than thru your transceiver to the power lines, plumbing, and other assorted paths. It is almost certainly desirable to disconnect your stuff at the slightest sign of lightning. And make no mistake about it you are increasing the risk to your whole verstunken household with an antenna array.

Having spent 18 years in Central Wisconsin where the ground conductivity is so crummy the navy loads the planet on ELF freqs at Clam Lake WI you have my sympathy. The main TV (and amateur repeater) tower is mounted on a lump of quartz rock. This sort of thing is done all the time in other parts of the country. The phone company has a gizwidgit for boring ground rods; no one believes they do a lot of good but it meets the code. Take a good look at what your phone and electric utilities have done, do as good a job as you can, and move on.

When you graduate to HF, the lack of ground conductivity means you can safely forget about verticals; but low dipoles run gangbusterly.

Good Luck

Dick McCollum N0BK

OF course it can be said that wild panicky banging is just as effective as
SOS when they are on one side of the hull and a would be rescuer is on the
other. Just a thought, and a touch of sadness for those souls that no doubt
died or are dying very slowly, and pitifully.

I did a bit of 'research' on the same two radios when it came time to
buy my first dual-bander... I chose the ft8100r... it is a great rig.
Not cheap (as some other rigs), but will do most everything you want.
Also, incredibly easy to mod for FRS... if you wanted to DO that sort
of thing... ;-)
As far as cross-band and satellite, I do neither. But the other
features sold me.

Its a simple matter of math.

In this news group is a representative sample of the entire ham community.
Given statistical analysis of the problem, the numbers suggest that
the amount of rudeness, bad behavior and general immaturity
is roughly 5 times that of the real world.

Now, I've lived in various places in the US over the last 35 years
(most of that time here in Arizona, and a few years back east.

The only place I have found where people display more rudeness
and general immaturity than here is in our nations capital. This is based
on actual experience.

I do not need credentials (as such) to formulate in "informed opinion"
(unlike certain others around here <case in point: John mackey>).

However, given some of my educational background
(associates degree in Business Administration with a minor in
Computer Information Systems), I can go by some basic
principles of psychology (required course work for a degree BTW).

1. I have found a fair number of my "ham radio brethren" to be
a. cliquish (almost to extremes)
b. opinionated
c. arrogant
d. uncompromising
e. immature
f. (too many other small reasons to list)

A lot of the older crowd of ham radio (elmers) seem a
bit more patient, willing to listen, willing to teach, etc. its the
age groups between 28 - 45 that seem to have the most troubles.

Now, admittedly, there are a few nice folks in the bunch,
but its rather hard to find them among all the clatter and noise
being made around here! I know several very nice hams in
the Phoenix Area and I respect their opinions, even if they
differ from mine. HOWEVER, I cannot condone the
behavior of the examples in here.

Granted, there are a few good hams even in this news group,
but they can't get a word in edgewise with the likes of
John mackey, frg9600, herbie and a number of others
swamping all the bandwidth.

If you have a problem with my opinion: oh well, life's tough
all over. I've stated what I want to state and its time for me
to shut up.

I wonder if that number is higher on this, and other, newsgroups, than in the "real world".

As a prefessional musician and sometimes speaker, I travel over a lot of miles during the year, and am seldom without a radio......am and seldom without someone to have a nice, pleasant conversation with. In the last year I've traveled throughout OK, MO, IL, IN, OH, KY, TN, MI, WI, KS, and TX......and not just a few miles, but a lot of miles, and a lot of time, and I can only think of one town, thoroughout all those states where I felt a little less than welcome, as a fellow amateur.

Perhaps the problem is how we present ourselves. Wanna see how friendly hams are? Try being friendly yourself!!!

>grounding them.

Pete,
The answer to your question would be as far as the Gap Titan is concerned is that it requires no ground. It has a ridgid counterpoise on the antenna. The Diamond on the other hand is a different matter. In most case they are DC grounded meaning again that a ground rod is not needed. So with that settled I would make sure that the station ground as far as rig and tuners meters ect are well grounded and you diconnect the antennas when you leave or when weather threatens.

I have a 'Fidelity 2000' CB radio (CB/81). Bought it at a village jumble
sale in 1984 for ï¿½15, and did the 'Bury Amateur Radio Society' mod to

convert it for 10m FM. It has the Cybernet board. Brilliant S-meter. 6dB = one S-point, S1 to S9. How do they do it? Don't know. Has AGC, which may help with 'logging' the voltage-to-meter deflection.

In comparison, my 2m Yaesu FT480 S-meter ('gooseberries, cherries, and oranges') is absolutely total rubbish.

Ian.

I think your math is flawed. Band occupancy is, simply, down, from the activity levels of years ago, while numbers of hams are up. Around what? 700K in the US? In a general population of 270 million?

Cursory observation of archives using Excel to examine data from deja archives indicates that the number of people who post on this group regularly is around 35. Transients are, of course, more numerous. There are about 150-200 posts on the NG server at a given time.

'Informed opinion' was that allgore's enemies leaked the news re the grand jury empanelment, last week. Dan Rather said it, everybody believed it, and that settled that. Then another relic from another presidency spoke up and said, in essence, that 'informed opinion' was all wet.

Justify to us how your 'informed opinion' of the allegedly-immature behavior of 35 post-ers and some more transients can be extrapolated to represent a statistically-valid snapshot proving the immaturity of 700K hams, much less the rest of the general population.

Greetings,
First the Russians told us that they were hearing morse code signals from the sunken sub. I remember this because as per usual there was an argument regarding how outdated knowing and or using morse code was on either this or another radio related newsgroup. Then we hear either from the Russians, British, or Norwegians, not sure which that all were killed immediately after the explosion. Is this more "cold war" rhetoric? I truly wonder if we will ever hear the real story? If the explosion was really large enough to kill all aboard, was there a release of radioactivity? I also know that subs have several means of emergency power, if so why did they keep saying that the radios were useless on the sub and that was the reason the submariners were banging on the hull or bulkhead with hammers as their only means of communications? I have seen some pics of the sub and could not tell if the antennas were damaged or not. I'm also aware that they must come to periscope depth for some higher frequency communications, but they can transmit at some depth utilizing VLF comms. Just some questions I was thinking that someone on this list could answer.
Thanks,
Gerry

It may seem strange, but I pretty much set up shop in the kitchen.
I always eat out, so there's no food around (Would you like fries
with that?). So the soldering iron resides in the kitchen sink, which
is a metal basin. Less of a fire hazard. And the solder splash flakes
right off the stainless steel.

Just on this point... about a week ago we were being told that
the trapped sailors were banging out emergency calls for help
on the side of the hull, but what was not clear was whether
or not they were Morse SOS type, or just wild panicky bangings
hoping anyone would take notice??
Either way, it didnt make any difference, and its kind of sad
to have to say that this doesnt make a good example of the
usefulness of learning morse.

THe comment about Hams concetrating on the higher freqencies intrigued me. Now granted any given amateur might well be interested in any given piece of the EM spectrum, to see what he can accomplish with it. But for me personally, I thought the challenge was to cast your signal as far as your skills might allow, HF certainly is the part of the spectrum where that is easiest. When I investigated getting a Ham license, I read the mags, and even joined the ARRL for a year. Where I lost interest was on the concentration on VHF/UHF, and studying the license requiremetns found that that is the very place I would be stuck working, with the first few license levels. Admittedly learning morse at any speed, was not something I was willing to do; try though I did. That said I do think there should be some code requirement at some point I wodner if my lack of interest in VHF/UHF has to do with the fact that when I dialed up any of the pertinent freqs on my scanner, all I could hear was people I could talk to on the street! I live in a small town type areaa, and know lots of folks. SHould I do any Hamming I would like to speak to new people!

I think you may have overlooked the fact that the U.S. Government would have to give Herbie permission to use another countries callsign. That will never happen.

I'll second Bill's suggestion about the alternator filter. Some
alternators have diode packs in which one diode goes bad. This is a
common situation on GA aircraft. The alternator still seems to work,
but the RF noise they generate is really obnoxious. It may also have
problems with the brushes not making good contact, or it just may not
have a clean connection to the battery. In any case, since you're
dealing with a car, it's probably cheaper to simply replace the
alternator (and while you're doing that, check the wiring to and from
the alternator to make sure it's all clean).

I had a situation where the alternator in my airplane rendered the ADF
(which operates on LW and MW) unusable. After installing a filter on
the alternator, the ADF quieted down to where I can hear 25 W beacons
from New Jersey while on the ground at a Maryland airport.

Good Luck!

>welcomed.

The future? I think the future will be in the technology. Once upon
a time, folks got in to this hobby for the world wide communications
access. To be honest, there are much cheaper and easier to use
devices out there for that purpose. Even third world countries which
used to be out of reach to most communications systems now have
telephone service somewhere nearby.

So I think the "operators" of this hobby will slowly decline. Once
the older generation of hams slowly dies out, I suspect the
rag-chewing will slowly fade away with them. Yes, they'll always be
around, but not in the numbers they used to be.

There will be those who chase DX, of course. But we're not doing this
for social reasons, we're doing this for technical reasons (ie.
contests, and QRP efforts). International communications capability
will be an afterthought of the technology. In truth, international
communications is already so much easier than it was years ago, that
people aren't nearly as impressed by the idea that one could talk to
someone in Australia from the east coast of the US, as they might have
been only ten years ago.

Further, I think the public service part of the hobby is on the wane.
Though it will never go away entirely, we have to admit that many of
the public services clubs used to do just aren't needed any more.
With FRS radios so easy to use, the need of a local ham club to run an
event such as a parade is minimal.

I think there will be more home brewing. I think there is a strong
interest in DSP technologies. And while all this is going on, we are
doing what this hobby has always been doing for many years: training
new engineers and technicians on the art and science of radio. No, it
won't be state of the art stuff. But it will be close enough to give
those who participate a leg up on those who have never done more than
crack a book.

And finally, we used to have a boost from military service training
that brought folks in to the hobby. These days, with so much of what
they use being pre-packaged bricks, many of them don't have any idea
what they're doing. It either works perfectly when they turn it on,

or it's broken. Where's the romance in that?

We're suffering from our own success. Now we have to re-invent ourselves. Just as aviation is having a substantial resurgence from the ultralight community, so we will have a resurgence from new generation home construction. How else can you explain the technical articles in QST these days? (Hey, nobody builds regenerative detectors for anything other than the "romance" of radio...)

It's a moot point because Herbie has essentially tied up and rendered impotent the ham radio division of the FCC through constant and frivolous appeals which nevertheless had to respected by that agency. The man knows how to play the law while escaping legal bills which is way beyond the scope of any other ham I've ever encountered. Say what you want about him and I HAVE but admittedly he's the shrewdest son of a gun imaginable; a consumate engineer of excuse, cover up, unrighteous indignation and loopholes. Had Herbie studied law as a profession, he would today be the Caucasian Johnnie Cochran. Yes indeed, "If the glove don't fit, you must acquit Schoenbohm" is a piece of work and why allegedly Badblood said he was no longer among the living is beyond me?

As it finally ended up, there was no need for outside help in the sunken Russian sub fiasco because every mariner was killed after the explosion brought her down to the bottom of the Barents. However case in point, RUSSIAN OBSTINACY. Here's something to mull over.

The inventors of the computer were Germans working on it BEFORE World War Two. Finally it went into operation as "Enigma."
Before the war began on 9/1/39, Polish spies were able to steal an exact duplicate and send it to Britain. Naturally it took quite a bit of time for the Brits to unravel and decipher it but nevertheless they did and in the Spring of '41, knew about every troop movement and what not by the Wehrmacht.

It became all too obvious that Goering had lost the air war against Britian by Spring '41 and Hitler had turned his attention to the east, the Soviet Union. By having broken the Engima code, Churchill knew the exact time of the planned German invasion of Russia in the very early hours of 6/22/41 and kept giving Stalin vital information about it.

Stalin was so paranoid about the west, he REJECTED all info as a capitalisitic ploy to undermine his commie "paradise." Had he paid attention, his troop, artillery and air force deployments could have smashed Hitler's invasion as soon as it began. Only after the invasion came about did Stalin realize his mistake and finally, when everything was on the line, was given an Enigma machine built by England.

History repeated itself. Supposedly we have good relations with the NEW Russia but deep down we saw how much Putin trusted us. Rather let submariners die than allow the Yanks to sneak a peek at the biggest submarine in the world. Has therefore the Cold War really ended?

HE ALREADY HAS LICENSES FROM OTHER COUNTRIES THAT ALLOW HIM TO TRANSMIT FROM THEM AND THEIR POSSESSIONS IF THAT BE THE CASE BUT HE COULD NOT TRANSMIT FROM ANY OF THE 50 STATES, TRUSTEESHIPS AND POSSESSIONS. Furthermore the Supreme Court doesn't have much to do anyway except try on robes and sandals so chances are good they will turn their full attention to KV4FZ. And then again if Herbie can hold out and GW wins the White House this November, a Republican dictatorhsip would tell Reed Hundt, FCC head honcho and Al Gore's friend, to hit the road to be replaced by Brother Stair which then would give Herbie the needed post convention bounce to not only retain his ticket but to also replace Riley Hollingsworth as enforcer.

The important thing is to find/recognize these new frontiers.

It used to be a major treat to hear a signal from another continent, or even across town, but not to kids brought up on internet chat groups and cell phones. We need to ask ourselves what incentives the hobby offers, or could offer, to justify it's exclusive use of valuable spectrum 'cuz if we don't have an answer, it'll go away.

One example, there's a bunch of Hams and potential Hams over on rec.outdoors.rv-travel who are retired and live out of motor homes and use email to keep in touch with kin. A major problem is finding phones to plug into on the road. Some Hams are already providing packet/internet gateways. If there were more, maybe we could bring a crop of these folks into the hobby, then intorduce them to other aspects they'd find useful and fun.

Again, I'm offering an example, not a solution. Let's do some brainstorming and come up with a plethora of others - better ones - instead of sniveling about fate.

Well, there's no doubt that Ham radio is in decline.
Despite the bells and whistles that manufactures add on to
new units, most technology, principles and practice are 30
yrs. old at least. Furthermore, unless you can afford 1000's
for plug 'n play units, the learning curve is steep and the
whole hobby is not really newbie-friendly.

If you gathered a group of young people together
and asked them about it I think their most cogent criticism
would be:

" Why should we go through the bother of testing
and licensure and the expense of (say) HT's ? There's no
one there we know to talk to. And besides, I can already
talk to all my friends with a cell phone and they're sort of
the same thing. I even get a 'free' pager with it. Who needs
Ham radio ? "

I think that hits the nail on the head. Sure, a Ham can
answer all these remarks, but not in any way that's going to get
young people running out to take their Element 2 exams. Why
bother?

I can certainly see the loss of UHF/VHF bands in the
future due to diminishing users and increasing commercial
pressure for bandwidth. I don't see the same thing happening
to HF and so those bands will remain part of Ham radio and
Ham radio will become more and more a "niche hobby." That's
not necessarily a bad thing. There are plenty of these from camping
to bungee-jumping to various hand crafts. They have their
devotees and will continue to do so.

In fact, I partially blame modern Hams fascination with
FM, HT's and UHF/VHF in general for contributing to loss of
interest by young people in amateur radio as these things can't
really "compete" with TV, Cable or cell phones for entertainment,
accessibilty or cost.

So what do I think would attract more young Hams ?
A return to Ham's roots. That means homebrewing HF capable
gear. It's wrong to see all young people as thrill-seeking consumers.
Teens don't learn PERL because they want to be over-worked
dweebs with no life. Sure, they want income. But also, they are
immersed in a technological society and naturally turn to that

technology to express their creativity. Believe it or not, homebrewing really is concerned with smart consumerism, recyling and personal independence and creativity.

Will young people buy that? Ultimately that will be their decision and their responsibility. Young people are perhaps most influenced by mentoring and societal trends. Certainly those societal trends don't appear to bode well for Ham radio: disposable tech., defining citizenship as priviledges recieved rather than as duties owed, credit enslavement rather than financial security. It's not a pretty picture. As to mentoring, that is your decision and your responsibility. You snooze, you lose.

73

Andrew
KG4JBM

P.S. Morse Code. I'm learning it and enjoying it. Still, I think it is not relevant to being a Ham unless that's your thing. But, trapped Russian submariners prove its continuing potential value in emergency communications. Morse can be sent by visual means as well as audio and so has a real place in emergency communications. It's just too easy for standard systems to fail. I think it was a real mistake by the Maritime industry and some Navies to abandon it as a requirement.

I think you have it. Dot rate is constant. But the dots and dashes
extend (but keep the same ratio between each other to fill in the
spaces).

So the CW gets "heavier" and lighter with weight...hmmm...that must be
why we call it weight instead of ratio.

Porkeyus,

First, since you don't sign your real name, I wonder about the credibility
of anything
you might say, but I'm in a good mood today so I'll respond with my $.02
anyhow.

I don't think its dying, it's definately going to go through a decline as
the baby boomers fade
off the scene, but I wouldn't write it off for the next century. Lots of
new frontiers
where there are no wires laid. Things run in cycles, the Internet is the
"big deal" for now,
but who can say it is the panacea either?

When the bands were reapportioned in the 60's, one of the groans that was
heard
was that ham radio was dying and that the 'old farts' from the spark days
were all that
there was to talk to, nevertheless the hobby has survived til now.

Besides, I don't think ham radio was ever intended to reflect a broad subset
of the population. CB
in fact was what brought it into the millions attention, and since then a
vocal minority (from there?)
has continued to bash the hobby about testing, restrictions and everything
else under the sun. Right
now there are no tests, unlimited power, and no obscenity restrictions on
CB, but their
numbers aren't growing exponentially either, so some of your arguments don't
wash here.

If you think its dead, then move on! Those of us who remain will continue
to enjoy the
hobby.

Rich WA9HHB

There is absolutely ZERO evidence that Morse Code was ever used by
anyone on that sub. It is an urban legend.

> Morse can be sent by
> visual means as well as audio and so has a real place in

Please come up with SOME kind of example that backs up this claim. The
Navy has PLENTY of back up systems. They don't need to be wasting time
or money training sailors to use an archaic mode of communications.

> I think it was a real mistake by the Maritime
> industry and some Navies to abandon it as a requirement.

Not at all. Made damn good sense.

STANDARD DISCLAIMER: I like Morse Code, and I am concerned about the
loss of life on the Kursk.

Hey, a young fella that has a head on his shoulders! Whatta refreshing post, 'Drew!
I've said all along that the emergency communications potential of Morse code is the ONLY real justification for requiring hams to know it - at whatever speed.
Congrats and welcome to ham radio, a hobby that's actually doing fairly well for one that's dying out... The peceived decline is only partial, some aspects of it are as alive and vibrant as ever. Homebrewing and kit-built gear is one of the most lively areas.

David,

My understanding of eBay's rules is that no one except the high bidder is obligated to buy the item. The seller can offer the item to the next-highest bidder if the high bidder backs out, but is also under no obligation to do so (he can always relist it, and eBay gives you a break on the fees under such circumstances).

In addition to placing a response comment in your feedback, if the seller is leaving false feedback that is a violation of eBay's rules. I'd file a complaint with eBay's Customer Service Dept.

I've bought numerous items for eBay, including radios, camera stuff and computer stuff. So far (should I knock on wood?) I've only run into one seller that I left less than positive feedback for (and that one was a neutral - the product was misrepresented but still OK).

Maybe I just live a charmed life (yeh, right) but I've had good experiences with all three of the mass-market auction sites (eBay, Yahoo Auctions and Amazon Auctions).

CALIFORNIA MAN ARRESTED FOR UNLICENSED OPERATION

A California man with a long history of alleged unlicensed operation has been arrested . The FCC reports that Richard Allen Burton was taken into custody August 5. The action follows Burton's indictment in May by a grand jury for the US District Court for the Central District of California. Burton, a former amateur licensee, has been charged with six felony counts of violating the Communications Act of 1934.

The FCC says Burton was operating without a license on Amateur Radio repeaters in Southern California after his license was revoked. Formerly WB6JAC, Burton's General ticket was lifted in 1981. He was convicted in 1982 on four counts of transmitting without a license and two counts of transmitting "obscene, indecent or profane words, language or meaning." Burton initially was sentenced to serve six months of an eight year prison term, with the remainder suspended. Upon appeal, the US Ninth District Court of Appeals upheld the unlicensed operation conviction but threw out his obscenity conviction. The FCC says that Burton transmitted without a license while on probation in 1984 and again in 1990. After the second incident, he was fined $2000 and received a year's probation.

In 1992, Burton attempted to get his Amateur Radio license back, but the FCC refused to reinstate him. He was briefly successful in getting a ham ticket in 1996, when he passed a Technician exam at a VE session. The FCC granted Burton a new license and the call sign KF6GKS, which was promptly set aside as soon as the Commission realized its error.

The FCC said that bail for Burton was set at $20,000. He's out on bond. Burton pleaded not guilty at his arraignment, and a trial has been set for October 3.

Hi Tom

>Ohm's law is fine. You have just not paid attention to what antenna
>was described.
>
>In a small loop, current can be hundreds of amperes with 100 watts.

Perhaps not! Apparently they are talking about what I would call an
"Army Loop" antenna or a "Hart Loop" antenna.
When I think of "Small Transmitting Loop Antenna's" for example 2 to
17 MHz, I visualize a 20 foot diameter loop, possibly as small as 14
feet in diameter for 7 to 14 MHz.

Sorry for the confusion!

Hi Ian

Agreed!

Also, if you have any ideas, I'm game, tired of paying shrinks for nothing, or should I say, no progress.

I'm glad you recovered from your fall, sorry to hear you were injured. My fall was broken a couple of times on the way down which decreased the acceleration factor I presume. I can't really say what I felt for sure, I didn't wake up right away, but apparently I hit flat based on the bruises on my backside, which might be what saved my dumb ^$$.

You might feel as if you need to correct yourself. I agree with most that you say but Reed Hundt has been out of the drivers seat at the FCC for nearly 2 years or so. The FCC Chairman is currently William Kennard for your info. He took over around 1998 or so.

Last time John-Corky read a header his conclusion was I was also a poster that exposed his child molestaion or something of that nature because we both used Netscape. John-Corky is about as good with computers and headers as he is hooking up a power supply.

> In fact the only OFF-topic posts were made to either you or Bill

> related.

He has been told this by at least 50 people in the last 6 months. over 100 in 5 years. John-Corky will never change and never get a brain.

BTW, possibly John-Corky's problem is he doesn't understand. The above paragraph written by "q��t��v� ��� " is probably too difficult for an uneducated John-Corky. Words like "publish" and "self-serving" probably are meaningless to John-Corky because of his lack of formal education. It's that or the worse case of denial ever recorded.

I agree. Folks have forgotten, or perhaps never knew, that ham radio
began because of bootleggers. Instead of trying to track them all down
the gov made it legal, but made them pass the test. Pretty smart
actually.

I have always wondered what propagation was like at 6 mhz, or 12 mhz.
If the govt kills the licensing of hams. The hams will simply revert
back to the "good ole days". Thats my opinion.

5270. IP Over packet radio : Help

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-22 00:00:00 UTC
From: whrudey@mdsi.bc.ca
Message-ID: <8nuetj$vm8$1@nnrp1.deja.com>
Source record: 104640

Hi,

I am exploring the application of a point to point radio link between two host computers for an academic project. Ultimately, I would like to write a Window NDIS driver to interface to a an RF modem via a RS-232C connection to run IP over this link.

Does anyone have any experience in this area? Any suggestions as to whether its technically feasbile or not? Ultimately, for this acedemic project, I would like to take an existing UDP/IP application an run it over this radio link.

Any advice would be greatly helpful. I have looked at a pair of RF modules by a Abacom and it seems to be feasible.

How about Amateur packet radio? From what I have read, it looks like with packet radio, you use a TNC to bridge the host computer and the radio. Is it possible to interface a VHF/UHF transceiver to a standard modem and write the NDIS driver on top of that? My understanding is that the standard analog modem would handle the digital RS232 interface and accompanying digital serial data and modulate it onto a typical carrier signal for transmission over POTS. Could you take that signal and route it to a VHF/UHF transceiver for transmission? Is that even possible or is that just plain crazy?

Are there any other valid, feasible solutions? The ultimate goal of the project is to write the driver and hence the data link layer (handling all the error detection, flow control, etc) and ultimate provide solution to run this particular UDP/IP application over top of it.

As for data rates, I have read about numerous RF modems that claim they can achieve over the data rates of 38.4Kbps (in theory anyway) using GMSK and DFM. Any recommendations on hardware?

Do I still TNC if I am writing the NDIS driver?

Thanks in advance!!

I bet that some repeaters do use DCS for CONTROL functions, but almost all systems use PL/CTCSS for simple, mobile-relay access (the repeat function).

> right off the stainless steel.

That's OK to alleviate the fire-hazzard issues. One important
thing however is that solder is usually 60% lead. (worse than
in paint chips from old buildings) Try this sometime. Get a clean
piece of tissue paper. Pull off a 14" length of solder off of the spool.
Wipe the solder a few times across the tissue paper and look at it.
See those grayish metalic streaks? That's lead oxide. Everytime you
handle solder with your bare hands, this material is deposited on the
surface of your skin of your hands, fingers specifically. Now, think
about having this stuff on your hands, when you eat... Worse yet, if you
eat while soldering-say-grap a handfull of those McDonalds fries
just after you soldered that mic connection. You have just ingested
enough lead to send the indicator of a led chromate test strip into
the danger level. The key? NEVER under ANY circumstances allow
any form of solder near food or where it is kept, period. Never eat
and solder. Alwys wash your hands thoroughly after soldering. Keep solder
rolls in plastic bags when not in use. Ventilate you area where you solder
via an open window or activated carbon fume-trap canister.
Finally, better get that roll solder by the roll by 2004. After that date it
is
to be banned from commercial sale by EPA regs. It's going to become
as scarce and pricey as Freon-12 is right now.

This was my mother's favorite argument. The one with which she
dismissed all challenges. She bristled at teh notion that someone
would dare to know and use language that she did not understand. The
irony was, that she insisted that I go to college, were I learned
such vocabulary and how it was to be best applied. But she took
offense when I actually did so, rather than learn the words herself.
After all, the language exists to be used. Why restrict doing so.

The issue is less that Windisch is talking over your heads, and
more that you're ducking.

The shame, therefore, would be yours.

I have just managed, with great effort, to convince an 8 ft grounding rod into the earth. I might have to use 6 gauge copper wire for my connection to the grounding rod and this wire will probably pass over a piece of aluminum along the way. Can I leave the portion of the wire between the connections insulated or is bare better. If I use braid or copper flashing, can I simply wrap the portion crossing the metal in some old bicycle tubing to keep the two from contacting.

I hope this question does not sound too ridiculous. I'm new to all of this and have a lot to learn.

> be appreciated. Thank you.

You should be able to run more than 50 W of power on most, if not all, bands. Let's get the required distances from your antenna (diagonally, at any angle) for 80, 40, 20, 15 and 10. You should be able to extrapolate from there.

Let's do an uncontrolled (general public) limit so you know the needed distance between your antenna and neighbors in other apartments.

Start with 100 W. Let's calculate the average power in a 30 minute time period, assuming 10 minutes transmitting, 10 minutes receiving and 10 minutes transmitting.

First, multiply 100 W by 40% for CW operation, 20% for unprocessed SSB, 30% for speech processed SSB and 100% for FM or digital modes. Then multiply by the percentage of time you MIGHT be transmitting in 30 minutes. At the 10/10/10 ratio I described, this is 67%.

CW - 100W * 40% * 67% = 26.7W
SSB1 - 100W * 20% * 67% = 13.3W
SSB2 - 100W * 30% * 67% = 20W
FM - 100W * 100% * 67% = 67W

Let's assume that you will use an indoor dipole or other antenna with 2.2 dBi gain (about right for ground planes, whips, etc, too). Calculate the numerical gain of the antenna using the formula G = 10 ^ (dB/10). For a 2.2 dBi gain antenna, G = 1.66.

You can then calculate the required distance to the antenna using one simple formula:

R = 0.0349 * F * sqrt(PG)

Where R is the required distance from the antenna in feet, F is the frequency in MHz, P is the *average* power in watts and G is the numerical gain of the antenna.

For the various bands, R in feet works out to be

MODE 3.5 7 14 21 28-148 MHz
CW 0.8 1.6 3.2 4.9 6.4

SSB20% 0.6 1.1 2.3 3.4 4.6
SSB30% 0.7 1.4 2.8 4.2 5.6
FM 1.3 2.6 5.1 7.7 10.2

And, yes, on 80 meters, that really is less than one foot! And this is a reasonably conservative estimate that assumes an antenna is infinitely small and includes a reflection factor of 4 dB. In a real antenna, one would be close to only part of the antenna, so, especially at lower frequencies, the actual exposure is usually less than the calculations would indicate. These sorts of calculations are quite sufficient to meet the FCC requirement to do an evaluation. If your antenna is farther away than the formula or table would indicate, then your dreaded evaluation is over and you can operate with confidence that you have followed the rules.

The standard and rules call for "whole body averaging," so you can calculate the distance from any part of the antenna to the center of the human body being exposed.

The only ptential problem may be on FM and/or on bands 21 MHz and above, if you were to have a dipole on the ceiling with an apartment right above, or a dipole on the wall with a living space right next door. Even accounting for wall thickness, on CW or FM, you may be a bit close. Keep in mind, however, that counts here is *actual* human exposure, so if the exposure is to the next door neighbors hallway, there would only be a problem if someone remained in one spot in the hallway for a considerable portion of the 30 minute averaging time.

For info on the subject, see http://www.arrl.org/news/rfsafety .

In reality, Gerry, this probably has more to do with people who have no idea what they're talking about running their mouths anyway, than it has to do with cold war rhetoric.

We have the same problem in this country. Whenever something happens (a plane crash, or whatever), there is always a rush of people who come forward to give their opinion. Of course, these people have never been to to scene of the accident, and have no idea what is really happening, but they will stand in front of that tv camera and talk like they do know something anyway.

What is really bad is that the darn press, in a hurry to get the story out so they can make money by attracting advertiser, will put this crap on the air anyway, even though they know the person has no idea what he is talking about.

> If the explosion was really large enough
> to kill all aboard, was there a release
> of radioactivity?

Both our government, and their government, is being very quiet about this. Strangely, so is the press (here and there). Now, I can understand why the press there is not asking questions about this (the press is controlled by the government), but one has to wonder why our "free" press is not asking questions about this. Prehaps our press is not so "free" after all.

> [snip] I'm also aware that they must
> come to periscope depth for some higher

> frequency communications, but they can
> transmit at some depth utilizing VLF comms.

Gerry, I'm certainly not an expert on this, but I have read a little on the subject. As I understand it, to use VLF, they have to use a long wire antenna designed to trail behind the vessel while underway. Of course, since they are not moving, it may be impossible to extend this antenna out. And, remember, we don't know what damage has been done to what systems, or what systems were designed to still operate on emergency power.

Of course, all of this is assuming that any crew members survived at all to even send a message. Remember, most of the info we have been getting about this has come from people who wre not on the scene and are not really aware what is actually going on. For all we know, not a single person survived the initial incident. The reports of survivers banging on the side of the vessel may be just wishful thinking by someone not on the scene, a misunderstanding of messages sent from those on the scene, or simply exaggerated interpretations of the messages received.

I tend to suspect the last explination. What probably happened is that someone on the scene reported hearing noises inside the sub (probably things falling or metal cooling) and then someone on shore decided to exaggerate a little, while talking to the press, by saying the noises were code messages from survivers. And, of course, the press, still in a hurry to get the best story, rushed that out without checking with other sources first.

Of course, I know you meant to say it, but just forgot, so I'll say it for you, Robert. If you use the kitchen sink area to solder, don't decide to get a drink of water while holding the soldering tool - electricity and water does not mix.

I like to use the kitchen table. The floor around the table is tiled, and the lighting is better in there anyway. Of course, I've never burned anything with a soldering tool yet (other than the occasional finger), so my choice of the kitchen table has more to do with lighting than safety.

Hey, try using better solder, Eric. There are some solders, with less lead content, that is far safer to use.

Ed,

You are the man. But, we've come to expect this kind of reasoned answer
from you. A friend of mine operated HF from his apartment using an average
of 50 - 80 watts CW, and a rotatable dipole. He worked nearly 150 countries
and all states. So, for xyz53, go get that FT-840 and have some fun. And
by all means, try a little CW while your'e there :-))

Isn't it fun? I've got five of those things in the ground - one for each antenna mast and three for the radio. Not too bad where I live now (soft soil), but I swear that I went through a few rocks driving rods into the ground in Washington (state).

> I might have to use 6 gauge copper wire

Generally, it is better to have it insulated, especially if it comes into contact with anything along the way (especially metal, but anything). As for RF control, the metal it contacts may defeat the effort. As for electrical safety (lightning protection. etc.), remember that the wire is going to get real hot if it does its job. Anything it touches could get burned and insulation might reduce that a little.

It constantly amazes me how so many businesses claim to be located in Houston, yet are not. This is especially apparent in the ham community. For instance, this is in reality the CLARC Swapfest, which is located in Webster. Yet it is advertised as a "Houston HamFest." If it's a Houston HamFest, wouldn't it be located in Houston?

The same holds true for Houston Amateur Radio Supply, which is reality is located in Spring.

Al Bore had no substance in his speech, and did nothing more than ramble on and on about his claim to fame. If his homestate of Tennessee was so great then how can you explain that he did not choose his own state to at least educate his own children. Al Bore will not even carry his own state, will get defeated soundly and return to the Buddist Temple for more fundraising. Although he says that he wants to clean up campaign finance he obviously thinks that people have forgotten the Buddist Temple ordeal. Hey, I was informed that AF2Y has been jamming on 14313 again, any information on this report??

Actually I agree with you that soldering could be a real fire hazard. For example, it is possible to set the tip temperatures to 750 or 800 deg. F and this is enough to ignite some types plastics found on common computer equipment manufactured by lower cost manufacturers. Oil based liquids such as cooking oils have flash points of about 575 deg. F. Carpets can go either way, depending on if they have fire retardants added. Beds are real bad and so is most padded furniture. But I would also note that, especially when desoldering or using resin core is the importance of good ventilation (acidic fumes) and eye protection. These are precautions commonly employed at most workplaces. No reason to flame your post at all.

There will always be hams and there will always be ham radio, legal or illegal. That is due to the ham radio gene. If all frequencies were declared off-limits tomorrow, such people would still be on the air illegally, rendering the freed frequencies useless to any new owners. This is especially true with such a vast installed base of hame radio equipment. It is as pointless to discuss the future of ham radio as it is the future of baseball. It will always be around, going through periods of ups and downs but never ceasing to exist. Ham Radio fever; Catch it!

Source record: 104717

Once the covenant is attached to the deed, it goes with the property. It doesn't matter if your signed the covenant or not; it is part of the deed for perpetuity and goes with the land. That is also how liens work. Your real estate agent is correct. You need to find property that is free of restrictive covenants. Unfortunately, in doing so you will be ruling out many desireable properties. You never really 'own' real property in this Country (or in England, whose Magna Carta was the source for many of these ancient laws). Your merely own a right to use land in certain prescribed ways that are not otherwise preempted on the deed. In some states, you may not even own the oil or minerals that may exist under the land that you purchase. For liens, others may have have prescriptive liens that give them the right to use portions of your property forever, but never forget that you, the owner, will always have the right to pay taxes on that same land that others have a right to use.

Hi,
I'm also a new, young ham and my first radio was a Alinco DJ-195T. It's 2-Meters and has a scan function. It runs 5watts and you can get a "Low-Power-Battery-Case" for it. It's cheap in price but if you want to go up a step get the DJ-196T. The only differnce? Back-lit keys.

Tom, I am a little confused.

33% weight makes the dots 2/3 of the original length.
If dashes are/stay 3 times the dots, then
dash length = 3 * (dot length * 2/3) = 2 * dot length?

A weight of 67% makes a dot twice as long as the off period.
So the dot becomes 4/3 times its original length.
dash length = 3 * (dot length * 4/3) = 4 times dot length?

In the last example dashes fill up a full space.
The spaces between dots and between dashes are not the same.

As far as I understand the dashes are shortened or extended the
same amound of time as the dots.
As a consequence the ratio between them is not constant.

As you said Tom:
> In early keyers, that was accomplished by changing the threshold
> point of a triangle wave triggering system.

O.K., I registered to do a renewal. The hardest part was spending 15 minutes trying to figure out the stupid web site. The FCC really needs to learn how to give clearer or step by step instructions.

Well here is the good part. Six days after renewing my license through the ULS, I received the renewal in the mail. Now that was fast! I did not know the government could do anything fast. That was a real surprise.

Regards,

Duffy

hi either way is ok, that is use a green jacketed #6 thhn copper wire
with the proper one piece ground rod clamp, or you can simply cover the
portion that makes contact with the alum with a green colored tape. of
course the inner tube idea will work as well. use a #6 minimum size wire
though.

If I had to hazard a guess, i'd say it's because Houston is a good
reference point for an announcement that is sent nation-wide..... people
all across the country know where Houston is, but I doubt they have
heard of "webster"...

Thanks, Kenneth.
I wasn't aware that there was such a thing as a ground rod clamp. I was just going to use a hose clamp. Also, does it make a difference whether the wire is solid or stranded?
Thanks,
Rick, KB1FLR

Five? I would have been typing this from a hospital bed. The soil in New England is somewhat famous for it rockiness. Seems a glacier pushed all of the topsoil down to Pennsylvania and left the rocks. Perhaps the next glacier will be kinder to hams.

The only "dumb" question is the one you "don't" ask. It's
very difficult to have a ground wire that's too big. It's real
easy to have one too small, so go for the largest that's practical
for you. A 'flashing' ground wire is even better.
Never solder a ground wire to ground rod connection, always
use a clamp(s). (One 'strike' and the soldered connection would
be history, and then no ground.)
A ground wire should not come into contact with ungrounded
metal(especially if it's part of a structure). No idea what the
recomended clearance is, but a foot or so sounds reasonable. If
you use something to insulate the ground wire, make sure it will
stand the amount of voltage the ground wire has to handle.

Not necessarily. If their newsreader spits out groups in alphabetical order, they'll see .antenna, .boatanchors, .digital.misc, .dx, and .homebrew pop up first -- those groups will leave a very good impression on the new reader.

You let
> the TV rule your home, and not Christ. Be warned, God will judge
this
> world soon. Yes of course Christmas and Easter would be considered
pagan to you and what is taught by STair. Of course we wouldn't want to
honor the Birth of Jesus now would we, and most certainly we would
never want to honor his resurrection and what means either. Heck no,
why would anyone in their right mind want to do a thing like that.

Why we need to all go and live with Mr. Stair and all his brainwashed,
family obligation rejecting people and live RIGHT IN THE PITS OF HELL!!!

All those things you call evil and sin are a big joke compared to
living and believing in Stair. He is more evil than any pokeman or
potter's combined. YOU JUST HAVEN'T REALIZED IT YET!!! How very sad.

Stair would rather have his followers stay with him than take care of
their old and dying parents. In the Bible it is very clear what God
wants us to do about taking care of parents. One of the ten
Commandments states HONOR YOUR MOTHER and FATHER "ALWAYS" Not just
sometimes or to a certain point but "ALWAYS"
It also says to REPAY YOUR Parents!!!! It also says, " and this is the
kicker if you can even get this one?" see below

> All quotes from Brother Stair are word for word and all his quotes
are in "blue".

I felt a strong need to respond to this message because I have family
members living with Stair.

This is where I started to quote Brother Stair's message:

"The Scriptures tell you, 'Let us lay aside every weight, and the sin
that does so easily beset us.' "

He never gave a reference for the above verse, but it is part/half of
Hebrews 12:1, which is in fact a continuing message from Paul starting
in Chapter 11. Chapter 11 is talking about examples of faith in people
from the past in the Old Testament. You can't just start out with
Hebrews 12:1 because it needs to include at least part of the ending of
Hebrews 11....."....And all these, having obtained a good testimony
through faith, did not receive the promise, God having provided
something better for us, that they should not be made perfect apart

from us. Therefore we also, since we are surrounded by so great a cloud of witnesses, let us lay aside every weight, and the sin which so easily ensnares us, and let us run with endurance the race that is set before us."

Stair then goes on to say:

"What are the weights? What are the things weighing us down? Holding us back? I mentioned them to you many times.The first one is your family....oh, yes, I can see it....have seen it, hundreds and hundreds of times.'What am I going to do about my wife? She doesn't believe, she won't go along. What am I going to do about my children?'

Well, friends, if you go back and look in Noah's day. Noah did something to bring about a response to his children and to his wife. And, they followed with him and walked with him. What was it? I tell you right now...it was the fear of God. It was the FEAR of God on Noah.

It is better to obey God...'I can't leave my family behind.' If death would come, you would. If war would come and....the....government would call you, you would. If sickness comes, it just doesn't keep you well, because of your wife and your family.....How many have learned that the hard way?

'What do we do Brother Stair'? You ask God to help you have the faith to believe to obey. If you do that, then He helps you in any situation. 'How are we to do that?' Why, you lay aside every weight, and the sin that does so easily beset you.

As I have been driven by the Holy Spirit today, to talk on the subject of "DOING". I had to find Scriptures to help me out."

The Scriptures he uses to help him out are 2 Corithians 8:9, 10,&12. And Stair mainly speaks about having a "willing mind" to be able to leave your family for his ministry, which is living on communes he has set up throughout the US and at least one in Canada.

If a family member should happen to die, we would know they did not reject their family for a leader of a commune. They just happen to die. There is a big difference.

If war would come and family members served their country, we would miss them and cherish each letter, phone call and visit home. We would pray for their safe return home. If and when they made it home, there would be much rejoicing and thanking God for their safe return home.

I was sick a lot when I was little and it MOST certainly did help me feel better to have my mother take care of me. She did nothing magical, but just knowing she was close by, lovingly taking care of me made all the difference in the world. It is a great comfort to have family/loved ones near you in times of need or sickness.

Stair is telling us we need to ask God to have the faith to leave our family behind and to believe and obey Stair. He is clearly trying to

convince us that our family is the weight/sin spoken about in Hebrews 12:1. And places family at the top of the list. When in fact the Bible does not say this at all.

When Stair was asked, "What do I do about my wife? She doesn't believe, she won't go along." What is Stair really saying? The wife doesn't believe in Jesus as her Lord and Savior, or doesn't believe Stair is The Last Day Prophet of God? The wife isn't a true believer because she will not go along with Stair's commands to leave her family and the world behind to follow him?

In 2 Corinthians 8:9-12 It is talking about the price our Lord and Savior paid, in His atoning death for us, in our place, on the cross. He emptied Himself of His heavenly riches, and this is the supreme incentive of all genuine Christian generosity and charity. It is not something that can be commanded on anyone. It is something that will come naturally from the heart of a true believer. Here is a little story that I hope makes my point:

One day a lady received a letter in her mailbox. It did not have a return address or postage. She opened the letter and it said,"I am going to be in your neighborhood today and will be paying you a visit." It was signed Love, Jesus.

The lady wondered why the Lord would want to visit her? She thought, 'I am no one special, that He would want to visit me.' She also became concerned, for she had nothing to serve her very special guest.

She grabbed her purse, put on her coat and left to buy something to serve her very special guest. She only had a few dollars left to last her the rest of the week. She managed to buy a couple slices of turkey, a loaf of french bread and some milk, leaving her with a few cents left.

On the way home she noticed a couple in the alley. They looked cold and hungry. Then the man approached the lady to ask, "Can you help us out, my wife and I are in need. You see we have no place to go and no money to buy something to eat?"

The lady said, "I am sorry but I only have a few cents left and these groceries are for a very special guest, who is coming to visit me."

The man replied, "That's all right, we understand." He then put his arm around his cold shivering wife and started to walk back in the alley.

The lady noticed how cold they must be without a coat and she just couldn't leave them like this. She said, "Wait, you take these groceries, I don't need them." She then took off her coat and handed it to the man's wife. She told the man's wife," I have plenty of coats at home, I want you to have this one." The couple thanked the lady and she started to walk home.

By the time she made it to her front porch, she was very cold. As she was fishing for her house key, she noticed another letter in her

mailbox. She thought it very odd to have another letter. She never knew the mailman to come twice in one day. She took the letter and once again it had no return address and no postage. She opened it and started reading, "Thank you for the wonderful meal and for the warm coat." Signed, Love, Jesus

This story goes right along with Jesus' words in Matthew 25. And is just a little made up story I received one day from a friend.I thought it helped show what Jesus meant in Matthew 25.

Now when Stair uses 1 Chronicles 28:9-10 I do not see the reasoning of putting these two Scriptures together. Except that the words 'willing mind' is mentioned in both 2 Corithians 8 and 1 Chronicles 28??

1 Chronicles is God speaking to Solomon and God's instructions to him. Then David gave Solomon the plans for the vestibule and all the plans that he had been given by the Holy Spirit. This is a copy and shadow of Jesus as Lord and Savior. Jesus was always looked to and every Old Testament Sabbath, feast, ark of the Covenant, etc.....was a copy and shadow of our Lord Jesus Christ. The Book of Hebrews explains how Jesus was the shadow of things to come. ...."Seeing then that we have a great High Priest who has passed through the heavens, Jesus the Son of God, let us hold fast our confession. For we do not have a High Priest who cannot sympathize with our weaknesses, but was in all points tempted as we are, yet without sin. Let us therefore come boldly to the throne of grace, that we may obtain mercy and find grace to help in time of need." (Heb. 4:14-16)

So I am not convinced by the Scriptures Brother Stair used to help him out. He then goes on to say:

"See what God is trying to do here? He is trying to get all of us to have all things common. Sell what you have. Obey God. Come out from among the world. And if you show a willing mind....you know...,I.....I.,..many times people get upset with me, because they say, "Brother Stair, where do we go?" And what they want me to do, is direct them to one of our communities, or one of our farms. Where they can just move in, with a prepared place to stay and all of the things of responsibility removed........and they can.....you know......be free."

What is Stair saying? Sell everything, come out from among the world and then what? Stair is the one calling people out, preaching/teaching people to sell what they own and get out from among the world, and leave their family if need be.What does he want people to do? Doesn't he want them to join one of his communes? He claims to be the one to bring in the kingdom and be the leader of the end time saints.

Those that are followers and members of his communities cannot even be the type of person mentioned in 2 Corinthians 8. If they sell all they own, they are told to give what they have to his ministry, to help him carry his message to the world. All generosity and charity is within

the group structure. Nothing is given to their neighbors. Nothing is given to the hungry. Nothing is given to orphans. And nothing is left for the care of their family. Stair says one of the new commandments God gave him, was to get out of debt. But, my family members that joined Brother Stair, left us with nothing. Sold their house to a close family member and is charging interest. I guess being in debt is a sin, but being a debtor is not??Nothing is given to any other ministry outside of theirs. All generosity and charity are self-contained within these communities.

They are told however that what they give to Stair's ministry is giving to the world, because this helps get his message on the airwaves. Which Stair claims is God's end time message.

Are the above message "quotes" actually from God? What does God say about the family? Does God ever mention or hint at leaving your family and come out from among the world?

Paul, tells us in 1 Timothy 5:3-4 , "Honor widows who are really widows. But if any widow has children or grandchildren, let them first learn to show piety at home and to repay their parents, for this is good and acceptable before God."

vs 8 "But if anyone does not provide for his own, and especially for those of his household, he has denied the faith and is worse than an unbeliever.Likewise, teach the older women to be reverent in the way they live, not to be slanderers or addicted to much wine, but to teach what is good. Then they can train the younger women to love their husbands and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the Word of God." (Titus 2:3-5)

"Your wife shall be like a fruitful vine In the very heart of your house, Your children like olive plants." (Psalm 128:3)

"Children's children are the crown of old men, And the glory of children is their father."(Proverbs 17:6)

"So husbands ought to love their wives as their own bodies; he who loves his wife loves himself. For no one ever hated his own flesh, but nourishes and cherishes it, just as the Lord does the Church." (Eph. 5:28)

"Let the deacons be the husbands of one wife, ruling their children and their houses well." (1 Tim. 3:12)

"Now to the married I command, yet not I but the Lord; A wife is not to depart from her husband. But even if she does depart, let her remain unmarried or be reconciled to her husband. And a husband is not to divorce his wife." (1 Cor. 7:10-11)

"......'But from the beginning of the creation, God made them male and female.' 'For this reason a man shall leave his father and mother and

be joined to his wife, 'and the two shall become one flesh; so then they are no longer two, but one flesh. "Therefore what God has joined together, let not man separate." (Mark 10-6-9)

I did not even mention God's Commandment to honor our mothers and fathers. If you look in the Bible you will find this commandment of God mentioned many times.

One of the last words spoken by Jesus, as He was in much pain and minutes from death, was to make sure His mother was well provided for.

"When Jesus therefore saw His mother, and the disciple whom He loved standing by, He said to His mother, 'dear woman, behold your son!' Then He said to His disciple, 'Behold your mother!' And from that hour that disciple took her to his own home." (John 19:26-27)

When I pointed out the above verse to a "loved one" who is living on Stair's commune. She wrote back with this Scripture:

"Then one said to Him, 'Look, Your mother and your brothers are standing outside, seeking to speak to You.' But He answered and said to the one who told Him. 'Who is My mother and who are My brothers?' "

And He stretched out His hand toward His disciples and said, 'Here are My mother and My brothers! For whoever does the will of My Father in heaven is My brother and sister and mother.' "

Jesus is making a point here. All believers do become a part of God's family. Jesus was always there for His family. And provided for His mother. We also have to understand that Jesus was God in the flesh and had a very important mission to carry out. His job was more important than anyone elses could ever hope to be on this earth.

Jesus said in Mark 7:9 "All too well you reject the commandment of God, that you may keep your tradition. For Moses said, 'Honor your father and mother; and He who curses father or mother, let him be put to death.' But you say, 'If a man says to his father and mother, Whatever profit you might have received from me is Cor'ban--(that is, a gift to God), then you no longer let him do anything for his father or his mother, making the Word of God of no effect through your tradition which you have handed down. And many such things you do."

Isn't this exactly what Stair is teaching? To reject ones family for "his" traditions/teachings and commandments?

As Stair preached his message on laying aside every weight--he places first on the list 'family'. And then goes on to try and convince his listeners that their family is a sin to be gotten rid of.

He is teaching his own brand of religion. Preventing his members from taking care of their family, using God as an excuse. Jesus said in the above verse that they were in fact rejecting the commandment of God and making the Word of God of no effect. Stair completely fails to know the responsibility that comes from God's commandment to show honor to our

family.

A true follower of Christ will care for their family members. Their time in family affairs, planning and looking ahead for any problems that might arise and doing things to alleviate them.

God calls all those that believe in Him, His family, "The family of God"

Family does matter to God! God designed the family, both physical and spiritual. He set down certain rules on how it is to function and how each member of the family is important to keeping a family together.

The right perspective is important and we are to love God first and foremost. To understand what Jesus actually accomplished on the cross. To learn what God's Word really says. To always check the Scriptures to see what someone is preaching goes right along with God's Word or not. Stair teaches things that he should not teach. He also does not handle the Word of God correctly. "For God is not the author of confusion but of peace, as in all the churches of the saints." (1 Cor. 14:33)

"Be diligent to present yourself approved to God, a worker who does not need to be ashamed, rightly dividing the word of truth."(2 Tim. 2:15)

"To the law and to the testimony! If they do not speak according to this word, it is because there is no light in them." (Isaiah 8:20)

this is just one of many examples of how Stair takes Scripture out of context, twists it and mangles it all to his view point. That's all it is his view points and they are truly scary and evil!!1

That's all I am going to say! I am very busy starting my online business, but I will check in once in awhile to see what's up, so watch out!!!
Oh just in cause you are wondering how I could afford to buy a new eight passenger Chevy Tahoe from my online business, anyone is free to email me at tmcalla@msinter.net YOU WILL NOT BELIEVE this Major Global Ground Floor OPPORTUNITY!!!

Bill Snyder's Hurricane Frequencies has a new location!

Reset your bookmarks to

http://aa6kc.home.mindspring.com/

Same valuable high-frequency disaster communications information as always. Lots of other disaster communications and weather links.

Apologies for the temporary absence. My old ISP folded, and refused to redirect to the new URL. Grrrrr!

Please send information updates (additions, deletions, corrections) to me at my new e-mail address:
billsnyder@mindspring.com

Thank you!

You might call me a "contributing factor". However, I didn't cause the trouble.
that was already going on before I arrived.

>
> I think it was him and a few of his adversaries who used to mix it up on here
> every day for several months before all of them suddenly disappeared. Or am I
> thinking of someone else?

oh yeah! we mixed it up good.
funny thing is, I am still around while the likes of timmy hoffman and his ilk are

spending time paying off FCC sanctions (fines, etc)

I didn't come here (or to ham radio in general) to win a popularity contest.
I came to ham radio because I believed in being part of something greater
than myself (and still do).

It saddens me that some (like John mackey) choose to sully the name of
amateur radio because they just don't know any better.

Of course, there are those around the phoenix area that are still pissed at me
because I would not back off on a few issues that they weren't willing to deal
with.
and there are still others who think that I should never have been given the
oportunity
to get a ham ticket in the first place. Fortunately, these folks don't run things
or make the rules.

We all have rights to our respective opinions and I choose 9as is my right) to
exercise
them at any oportunity.

... The enemies of liberty have always been apathy and despotism

A recent blurb lifted off the ARRL website:

FCC Turns Down CB DX Petition
NEWINGTON, CT, Aug 22, 2000--The FCC has denied a petition that would have amended the FCC's Part 95 rules to permit DXing on the 11-meter Citizens Band. The petition sought to amend §95.413 of the rules that prohibits communications or attempts to communicate with CB stations more than 250 km away and to contact stations in other countries.

Designated RM-9807, the petition was filed by Popular Communications Contributing Editor Alan Dixon, N3HOE.

"Dixon's request is inconsistent with the purpose of the CB Radio Service and could fundamentally alter the nature of the service," the FCC said in turning town the petition.

The FCC action was adopted August 18. The Order was released August 21.

The FCC said CB operators generally supported the proposal and stated that the present rule was unenforceable.

The ARRL commented in opposition to the petition, noting that long-distance communication is contrary to the fundamental purpose of the CB Radio Service, and that legalizing it would encourage the use of illegal power amplifiers. "The Amateur Radio Service is the proper forum for the desired long-distance communications sought by the Dixon petition," the League told the FCC.

The National Association of Broadcasters also opposed Dixon's petition. The NAB said that the restriction was necessary to deter CBers from operating at excessive power levels and that consumers must be protected from illegal CB transmissions that interfere with radio, TV and other consumer electronics.

The FCC said it agreed with the ARRL that the CB Radio Service is for short-range personal and business communications and "we note that this purpose has not changed since the service's initial authorization."

The FCC acknowledged that long-distance communications do occur inadvertently on 27 MHz, but the Commission did not intend to create a service paralleling the Amateur Service when it authorized the Citizens Radio Service.

"Amending the rules to permit long-distance and international communications would undermine the purpose of the CB Radio Service rules and compromise one of the core distinctions between the CB Radio Service and the Amateur Radio Service," the FCC concluded.

****

Although I'm not opposed to the decision in any way, I just think that the comments made by the FCC about DXing on 11 meters seem to indicate that they simply haven't been listening to what's going on on that band. When 11 meter band is open, a cursory scan of the 40 channels will reveal that DXing is actually all you can hear at some points. And these aren't "inadvertant" or "sometimes" DX contacts that are being made, as the FCC commented they are.

The fact is that because of the sheer numbers of illegal high power DX-ers on, below, and above the allocated 40 channels of the CB band, that bandspace contains the majority of the highest powered and most maniacal DX-ers in the world today! But because the FCC's priorities in enforcement start with interference to other services, rather than violation of the CB operating standards, CB has turned into a DX-er's paradise of illegal activity. I've yet to see any mention of FCC enforcement logs revealing the raiding of a CB high power "key-down" event, where entrants show up with 5k, 10k, and even 20k mobile setups to see who can key these things up and drown out the other competitors on the air. I've yet to see any enforcement logs revealing the busting of CB shops that modify radios and sell linear amplifiers for 11 meters. Instead, they're going after licensed hams whose infractions simply pale in comparison!

"Dixon's request is inconsistent with the purpose of the CB Radio Service and could fundamentally alter the nature of the service," the FCC said in turning town the petition.

I'd like to know how ANY ruling by the FCC regarding the CB band could POSSIBLY alter the nature of the service???? Perhaps if they had said that the ruling could fundamentally alter the INTENDED PURPOSE of the service, I wouldn't be posting here.

> you're doing that IT'S JUST PLAIN FUN!!!

Absolutely!!!! Its the number one selling point. People are not going to spend money on a hobby unless it is fun. And, if we want to really attract new people, we have to make ham radio even more fun then it is today.

At ham fests, how about modifying conventional games to include radio in some way? Or why not integrate ham swap meets into other technology shows (computer shows, boat shows, etc.)?

For clubs, what about far more social activities (grilling hamburgers in the park, baseball games, field trips to local radio facilities, and others)?

If you think about it for even a few moments, I'm sure you can come up with many other ideas.

Just remember, there is more than radio, even for people who are really into radio. Lets cater to those other needs also - entertainment, social activities, etc.

KUDOS, Ed! Great piece!.

As for the original poster, two suggestions.

Two seperate friends of mine are in "antenna restricted" situations. One runs the driven element from a "Butterfly beam" in his attic. He has DXCC on three bands and works almost everything he hears "bareoot", 40-6 and some marginal sucess with a wire under the eaves for 80.

The other has a "Texas Bug Catcher" on a metal plate with the MFJ "Artificial Ground". Not the best of all options, but it works. He uses his at low (under 80 watts) and has DXCC also.

73 and great job Ed.

Why not instead publicize the militia-screwballs
what broadcast daily diatribes of hate-speech
and edge-on dumb people to commit illegal acts
on a daily basis, on stations like WGTG and WWCR ?

What about the "broadcasters" what recently spewed garbage
about Art Bell on WWCR ? I hope Bell cleans every freakin
red cent from WWCR's bank account and that station get's it's
festering microphone silenced forever by Federal Marshals.

Howard Stern is a much more responsible broadcaster
who has more integrity, intellegence and broadcast
accuracy in his left finger, than all the domestic
"SHITwave Broadcast" stations can ever hope for in a Month of Sundays.

Hi, Peter:

Please tell your mother that when I am promulgating my esoteric cogitations, or articulating my evanescent superficial sentimentalities, or amiable, amicable, bellicose, philosophical, or psychological observations, I beware and deplore platitudinous ponderosity and pomposity. I cause my conversational communications to scintillate with unimpeachable lucidity and intelligibility, sans rodomontade, mendacious vivacity, or jejune jargon. I sedulously and assiduously eschew the propensity to polysyllabity, psittacistic vacuity, profundity, and the overarching snare of floccinaucinihilipilification.

73, Dave, K3BHJ

There are really only two points that need to be made:

1) (as pointed out by another poster) It's a LOT of FUN!!!

2) There's something for everybody. (Then you list all sorts of
activities, emphasizing that individual hams pick and choose what they
like to do).

A real life demo is also a big help. One of the big Field Day goals
here is to demonstrate ham radio in a public place. Works.

Check with your local radio store. I know ARRL and others have
published both paper and CD-rom based versions.

==========
Yep ArtSci has the following publication:
Repeater MapBook 2000 Its the Y2K Edition!!!

The Repeater Mapbook contains locations of thousands upon thousands of open
repeaters
throughout the U.S., Canada and Mexico. These DETAILED maps show all highways
and
major cities in each state. A PERFECT travelling companion.

Can be seen at URL:
http://www.artscipub.com/

Also lots of repeater guides on the web -- a few with maps, at URL:
http://ac6v.com/pageai.html

Jason,

If you need to make up an excuse then you don't want a ham ticket. And
we don't need them either.

Why does everyone think we need to increase our ham population anyway?
When I got on back in 61, we had around 200,000 licensed hams. And
since then we have nearly trippled that. Any you still want more, why?

Tell folks about ham radio. Demonstrate it to them. Offer them
assistance in obtaining a license. Brag it up. Then let them make the
next move. If their interested they will bug the crap out of you. If
not, forget it.

It is a federal crime to make death threats against not only a President
but a Presidential nominee. Look at what happened to George Wallace and
Robert Kennedy. Fuck Craig Kilborn! There are a lot of crazy people
out there that would do something like what he suggested.

In promoting ham radio, I think that the best thing is a live demonstration.....and that's something that most clubs don't seem to do very well.

There are all kinds of outlets for demos.....county fairs, hobby shows, small town festivals, schools, scout troups, civic clubs.....the list is almost endless.

And, perhaps we should think of more than just HF ragchewing on demos. APRS is a great demo because it's visual, and we live in a society that seems to be turned on by the visual more than anything else. The same goes for ATV or SSTV. Satellites are good too for demos.

Well, there's my .02 for the day :)))

Hey Pete, get off my case. Windy and I are buddies who pretend to be
contentious and I don't appreciate your coming in here to start up
belligerence among friends. And what am I ducking? All I alluded to was the
fact that I coined the name "wreckradio" which Dave used and why you took
issue over it is indicative of a real nebbish. And I'm sure your mother was
a fine woman but if she saw her son today, she'd be ashamed.

I agree. The ground wire would interact with the aluminum. Also, copper
foil is a good substitute for wire, from what I've read. I think
PolyPhaser and other sell it.

5385. Name your favorite selling point of ham radio!

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-24 01:23:40 UTC
From: jason_hsu@my-deja.com
Message-ID: <8o1tec$17r$1@nnrp1.deja.com>
Source record: 104589
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I'm looking for ideas on how to market amateur radio in flyers in order to attract NEW ham radio operators.

Some of my ideas:
1. Provide emergency communications during disasters that disrupt normal communications. (This would be especially helpful in marketing to Girl Scouts, Boy Scouts, 4H clubs, Red Cross members, and others involved in community service.)
2. Enter a MAGICAL world where you can chat with people many miles away or even overseas. (The MAGIC would appeal to children. I wish I knew about ham radio when I was so young.)
3. Use the secret code created by the legendary Samuel Morse. (This would also appeal to children.)
4. Compete in contests. (This would appeal to competitive people.)
5. Win awards. (Striving for awards like Worked All States and Worked All Counties would appeal to video game players, especially those who enjoyed rescuing Princess Toadstool.)
6. Use a communications system that does NOT depend on a telephone lines, the electrical power grid, or other fallible infrastructures.
7. Entry-level license that does NOT require demonstrated Morse Code proficiency. (Many non-hams assume that one MUST learn Morse Code to earn a license. This is no longer true.)
8. REDUCED emphasis on Morse Code for higher level licenses. (See above. In addition, few non-hams know about the recent restructuring, which has given them one less excuse not to be ham radio operators.)
9. Observe the skies during severe weather outbreaks and dispatch warnings of tornadoes, wall clouds, and other hazards. (I first learned about ham radio when i decided to take up storm spotting.)

5387. Re: Name your favorite selling point of ham radio!

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-24 03:58:56 UTC
From: njradiodude@aol.com
Message-ID: <20000823235856.18688.00000703@ng-cc1.aol.com>
Source record: 104591

PLEASE...PLEASE...P L E A S E!!!
Mention in your whatever it is you're doing that IT'S JUST PLAIN FUN!!!

I read so often all the stuff about what you're trying to do (which is admirable), and I always see being pushed is the public service aspect, the emergency communications aspect, contests, awards. YUK!!! BARF!!! PUKE!!! GET A MOP!!!

I was a kid (a few decades ago, but my memory's pretty good, what I remember of it) and all the usual stuff shown to attract people into the hobby, as I see it, has the real potential to make it all seem rather silly, and drives people from it, even those who may have had a passing thought about it a long time ago. The tried and true way of all the goody-goody sugary-sweet be a ham and save the world in time of crisis BS does not work. It sounds like an avocation. A job. A service. It is of course, but you won't get many draftees into this service if it aint FUN! I got into it because it looked like fun. IT STILL IS!!!

The way I see it, it's like fishing. Put something in front of them they might like. Get them interested. Get them hooked. All the rest will follow once they're in the freakin' boat.

Making it known the CW is all but gone is a good idea. But what does everyone like? FUN!!! In some way, shape or form, everyone likes to have fun. Ham radio is fun. I've been licensed for 12 years+ and it was fun then. It's still fun today. Let people know it's FUN!!!

Don't make it trite. Don't make it corny. Make it real and fun.

The one specific aspect of hamming that I've noticed over the past few months as I've had the opportunity to talk radio stuff with non-hams and non-techies at work that seems to get people interested or at least really paying attention is ham satellites and amateur television...both are relatively easy, available to entry-level hams and the best part...IT'S FUN!!!

Figure out 4 of 5 major target markets you wish to attract. Think of at least 2 or 3 aspects of hamming that will attract the interest of those in each target market. Figure out the cross-over aspects and sell them...keeping the emphasis on?...Fun. Right.

Kids: computers (not computer games, per se). Kids know more about them than most older folks. Ham radio has Packet, RTTY, AMTOR, DigiPeaters, sore and forward messaging on some satellites, etc). These are fun and incorporate radios and computers.

Teens/GenXers: I don't know. I was a boomer, myself. My kids are still in diapers. What the teens of today are into is beyond me. Talking! They like to

talk. On 2 meter or 440mHz repeaters, maybe someone would like to start a teen net, a teen-self-help I'll be there you you kind of thing. Ask a teenager what is fun to their age group. Think of a realistic way hamming could be fun for them.

Slightly older/20's-40's: Hit the family aspect. It's fun to go HF and VHF/UHF mountaintopping. Camping, canoeing, radioing can all be a part of family radio activity (over considerable distance as opposed to the FRS radios). Figure what families do that's fun...try to incorporate radio into it. Just BSing the time away while commuting is fun. On long car trips, bring the 2m and put your call on your back window with your frequency. Invite others to call you. Meet other families, other people on the road. Make counting antennas a game instead of license plates. As dad or mom leaves for a trip by car for business trip, see how far communications is possible. Make skeds and talk on the right band for the time of day. There's a lot of potential in this group as there is in all.

Still older/set in careers, etc. 50's: Make business trips a little more tollerable. Push portable/mobile hamming. Mag-mounts on rental cars. Small switching power supplies and mag-mounts on motel balconies, etc. Meet new people, maybe even talk to the family at home if conditions are favorable.

Older still/recent retirees: Push the fun of BSing about days gone by, the good old days, back in the day. Keep in touch with others who left the job. Keep phone bills down. Keep in touch with family across the country with weekly family nets. Family...all ages...all backgrounds... all parts of the country. Wire-up the Winnebago! Keep in touch with ham radio with fellow RVers, etc.

Seniors: This group has the most to offer to many of us simply because they're been there...done that. The technology was different, but they have so much to offer in conversation. There's so many elderly hams out there. Many are rather new at it. Hit the senior social and community rooms and housing complexes. Talk to the older hams. Find out why they are into it. How is it fun to them?

Once they're in the boat, then get them into contests, awards, service, disaster communications...once they're in the freakin' boat. All this will scare most from hamming. Get them for the fun, keep them with the sense of service and competition.

I hope this helps a bit. I think one of the Beetles said it best when he screamed "I've got blisters on my fingas!" Now, I do too. All this came off the top of my head as fast as my fingers could type. Given some thought, I'm most certain someone else could do some serious fine-tuning of these ideas, expand on them and make your project a success.

Good luck,

Tom KB2FIK

I was wondering if anyone in this newsgroup has seen such a thing as a quick release/connect mobile antenna for 2 m/70 cm?? I'll probably be using a glass mount or a wholeless trunk mount but unfortunately I live and work in a high-crime area and need a way to quickly put on and take off the antenna without much effort and without wearing out the threads on the antenna base. I recall seeing such an antenna for CB's about 20 years ago. Thank you in advance for any suggestions.

AF2Y

Okay, Doc, cuz I enjoy your 'company', I'll pretend that I do not understand
a word of what I wrote.

It is a bit of a stretch, however, to accept that you could sustain coherent
'thought' for 'one minute'. Would you care to lower your estimate to a
believable level? At least, you could have qualified 'thought' more
carefully.

Your being 'outta here' would not result in 'good' for where ever 'outta
here', is. Another egregious -- oops! -- regrettable overestimate?

Come, continue to inflict your soi disant -- oops! -- good on the bones of
wreck.r.r.mict.

Hummm, There is is a lot of "non existing" CW op's on the air. Sounds kinda familiar to the problem they had on the 735 keyer. The little slider was much too sensistive. You'd jump from 6 to 40 wpm with a small movement. I hated the thing and wondered if anyone at ICOM actually worked cw. I use a homebrew outboard keyer I've had for at least 15 years. I'm too used to it to switch. Only has a single speed pot on the front. Nothing else. Really easy to change speed on the fly. MK

Well I have a 1000MP Yaesu here now. The keyer in it also stinks.

The CW is "choppy", and it has no weight control. It, like the later
ICOM's, has a RATIO control!

My early 751A has a perfect weight control, although it is located
inside the radio.

When did the engineers who don't know or operate CW get jobs designing
keyers? What put a keyer in a rig that doesn't work right?

On the 735, if you rest a fingertip on the panel and cam the lever up or down it is almost possible to set the speed you want. Lots easier on the 706's.

But as to no one working CW anymore, I want to know the person's name who said it. I want to talk to his boss.

Keem-O-Sabe,

If your infering that the Indians had a country here first. I beg to differ. What you had was a bunch of naked people, of different tribes, running through the woods killing each other.

With the advent of the "White man" we organized this mess into a country. We threw out the Redcoats, brought in the black man.

Now we had a country. We put on clothes, ran around the woods and killed off the Indians. Then we enslaved the black folks we stole from Africa.

See, thats a real country.

Hardy Har Har !!

A good one.
>2. Enter a MAGICAL world where you can chat with people many miles
>away or even overseas. (The MAGIC would appeal to children. I wish I
>knew about ham radio when I was so young.)
Kids Today can do that with the Internet, CB and FRS radios, and
cell phones.
>3. Use the secret code created by the legendary Samuel Morse. (This
>would also appeal to children.)
Young kid would like the idea but older ones will say they have
encryption and digital cell phones.
>4. Compete in contests. (This would appeal to competitive people.)
>5. Win awards. (Striving for awards like Worked All States and Worked
>All Counties would appeal to video game players, especially those who
>enjoyed rescuing Princess Toadstool.)
A good racing game will excite them more.
>6. Use a communications system that does NOT depend on a telephone
>lines, the electrical power grid, or other fallible infrastructures.
A good one, it goes with idea #1.
>7. Entry-level license that does NOT require demonstrated Morse Code
>proficiency. (Many non-hams assume that one MUST learn Morse Code to
>earn a license. This is no longer true.)
>8. REDUCED emphasis on Morse Code for higher level licenses. (See

Done!
>9. Observe the skies during severe weather outbreaks and dispatch
>warnings of tornadoes, wall clouds, and other hazards. (I first
>learned about ham radio when i decided to take up storm spotting.)
Storm spotting is very cool.

Now for Number 10: This is one part of Ham radio that you can not do
with CB, FRS, cell phones, or the internet. Its Space communications.
were else can you work satellites and talk with Astronauts.
This along with Storm Spotting and Emergency communications are the

strongest selling points for Ham Radio.

Message-ID: <01c00ece$b621e3a0$ba43ba9b@JiBrady1.mis.tandem.com>
Source record: 104568

The audio on my TH-G71A is very good when in FM mode. Strong audio, very clear. However, I sometimes listem to AM aircraft. I find I must set the volume control almost all the way up, and I find the audio is "muffled" or not very clear. Much different than the FM mode. Does your radio act this way? I am trying to determine if there is any point on returning it for service. It is out of warranty. If they all behave this way, no point in returning it.

Under Part 15, it is not legal to make that modification if that results in an ERP greater than what the regulations allow.

Under Part 97, it is proper only if you are licensed (I didn't see any indication of such in your post) as an amateur radio operator AND the spread spectrum frequency hop algorithm that the device uses is either in the Part 97 rules or you have filed a statement which indicates it with your local FCC office.

As far as the metal plate being a ground plane, who cares? If you're replacing the antenna with one that is external, a ground plane for the stock antenna would not be used and is therefore irrelevant. I don't have any other comments on the modification you propose.

Folks,

VLF is only used in receive mode on the submarines - I don't believe
they have transmit capabilities.

Hi everyone!
I am trying to decide on a new mobile rig that can double as my base rig as well. Of course I am trying to squeeze every cent out as well.....

Anyway, I am trying to decide between the FT-100 by Yaesu and the IC-706MKIIG by Icom. Price is irrelevant as they are almost the exact same. What I want to know is how clear they are, ease of use, all the day to day stuff I would need. Memory programing and recall, stuff like that.

Thanks for any help or ideas!

K-S-0-F (callsign) dribbled all over himself:

> I didn't have any reason to "play it" because there was nothing to
> gain by doing so.

You have everything to gain, like credibility. You won't post the information because you can't. The information doesn't exist, except in your fantasies.

> Also, I don't care if you post your data or stay on the group,
> that is your choice.

As usual, you're trying to evade the issue, Toilet Boy. You know you've lied repeatedly about your so-called degrees, I know you've lied, and so do the people who've been victimized by your drivel. Don't waste my time with your stock never telling a lie in your adult life hyperbole. No one believes your pathological prevarications.

Even if you could post the information about your degrees, you don't want to (because you're a coward) and you don't want your critics, such as myself, to disappear. You are a masochist and thrive on the negativity. You enjoy causing what mayhem you can in the process and feed off the chaos. You're a complete sociopath, Toilet Boy.

Show some courage, Toilet Boy, and be honest for once in your squalid life. To remind you:

I'll post my data and then leave the scanner groups forever.
Here are the terms again, just in case you develop the intestinal fortitude to face yourself. So, show us, Toilet Boy, are you man enough to face yourself?

Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

I'll even sweeten the deal. *After* your information is verified, I'll post my data and then leave the scanner groups forever.

Roger,
Just dropped by snooping as usual and saw you still have a feud with Lysol. You have my utmost support in your battle with the poster from the Hennepin County Library. I wish you well and hope that mother is doing better. These fools who knock you for caring for her don't realize how precious are mothers. I ought to know since mine passed away four and a half years ago and I still miss her every day. It will take the deaths of the mothers of your harassers for them to realize what grevious sins they are committing by trying to humiliate a wonderful son. Keep up the good work and count on me always.

THAT is an outright lie!! It is so brazen that it can only be regarded
as a deliberately provocative attempt to inflame users here. To those who are
tracking such things (and reporting the same to John's ISP) this can be counted
as a deliberate troll, clearly designed to ridicule the late Mr. Cheek and
provoke the more serious users here. Give it up, John. Please, just give it up
and move on to something more worthwhile.

Either insulated or uninsulated is just fine. Your main concern
should be the wire itself - thicker is better.

And you don't need to run the wire directly from the antenna to the
ground rod. If your antenna is grounded to the mast, then simply ground
your mast. This will ground your antenna and mast at the same time.

Of course, it doesn't hurt to ground the antenna directly (by running
a wire directly from it). In fact, some people prefer this method.

>actually.

But there were no regulations until 1912, thus it was impossible to "bootleg." What actually existed was just plain old QRM due to mass confusion because no radio laws existed. Due to broad transmitting and receiving equipment, it appeared as if everyone was on the same wave-length: amateurs, commercial shipping, the US Navy -- no one gave way to anyone else. To try to get everyone to shut up in order to pass a message, a shipboard op might lay a brick on his key, hoping a continuous signal would get everyone to QRT. But then he'd be QRM'd for jamming everyone else. Hams would tell Navy ops to "shove it -- it's a free country -- we have as much right to the airwaves as you." It was a big free-for-all; there were no regulations. The straw that finally broke the camel's back was the QRM to Titanic-related traffic:

"With the first news of the sinking of the Titanic, every amateur in America camped on his key and added to the bedlam..."

"Thousands of messages piled up at the shore stations. At the solicitation of the American Marconi Company, the government ordered all radio stations north of Hatteras closed down, leaving only those at South Wellfleet, Siasconsett, Sagaponack, and Seagate open; they were to handle Carpathia traffic exclusively. The order was enforceable only on commercial stations; the amateurs blithely continued "on the air." The situation became so desperate that Newport Radio, a naval station, "requested every station in range to keep out" until a list of the survivors could be obtained. Department of Justice men went to work tracing the origin of misleading messages."

The disruption of distress-related traffic caused the ax to fall in 1912 -- licensing for *all* radio operators was instituted, amateurs were "banished" to wavelengths shorter than 200m, with the thought that those upper frequencies were a wasteland. Amateurs had to rework their gear to operate at such "high" frequencies, and promptly discovered the wonders of HF propagation. What the government thought was a wasteland turned out to be a goldmine!

Haven't been here for quite a while......what, finally, happened to
Bill ?
And, if he is gone, why is Mackey still here ? I thought he would,
finally, get a life if he didn't have Bill Cheek to hate.
Seriously, though.....what did happen to Bill ?
I had a lot of respect for the man and hoped things would work out.

==========
Hi Gary -- The only one I've seen is at:
alt.ham-radio.morse
The alt news groups are usually very low activity -- but there are four posts there at the moment.

Another place where CW is discussed frequently is
rec.radio.amateur.policy
draws a lot of CW discussions -- but usually pros and cons of the license requirements et. al.

For a massive list of ham related news groups -- see URL:
http://ac6v.com/anews.html

TNX. And Lysol is jealous mainly because his mother was the only
bargain basement prostitute in Glenwood, MN. Hel, she was the foirst
prototype for the dollar store. Lysol hasn't got the BALLS to say this
to my face.

Pete,
It won't make any practical difference (use the larger wire).
Besure to remove the galvanization from the 'galvanzd; cable, use
a clamp to the ground rod.

Ryan,
Not much help, but if possible listen to both. How a particular
radio 'sounds' is subjective (like Fords and Chevrolets). They're
both 'about' the same as far as features, so which do you like looking
at and listening to the 'best'.

Thank you all for the responses. At least now I know that what I
did was the right thing. I live in Malaysia and I have written to the
local HAMS. I wrote to them because they sounded friendly on the air. I
guess the same cannot be said with their e mail replies. Maybe they can
learn a thing or two on attitudes from the American HAMS here. 9M2s,
please take note. Thank you too for those who have sent e mails to me.

This book is a study guide for satellite imagery. Lots of glossy photos of the environment taken from the weather satellites and describes how to interpret them for various environmental conditions. Lots of text on how satellite imagery works.
This limited edition book originally sold for as much as $30 postpaid. It's in as new perfect condition and you can have it for $15 postpaid by snail mail or include an addition $3 for UPS. Email me at: andre@cyberpad.com and I'll tell you where to send the money.

For a complete list of the chapters and photos in this book go to: http://cyberpad.com/satbook.htm

Thank you

And; as my English teacher used to observe, "An inability to express themselves without descending into profanity!"

BTW next year, 2001, Radio Amateurs here (Newfoundland, Canada) and I guess also in the UK will be celebrating the 100th anniversary of Marconi receiving the first trans Atlantic wireless message from Poldhu, in Cornwall. I guess Marconi and those other early experimenters were some of the early radio amateur/experimenters!

More recently was it not a radio amateur who was the first to bounce radar signals off the moon shortly after World War II? Thus leading to space radio communication, satellite tracking and so on? Today we take radio communications out to Mars almost for granted; but someone had to be the experimenter.

Many years before that was it not radio amateurs who pioneered the way to using what in those days were considered to be the useless higher frequencies? Frequencies we use today for TV, cellular wireless phones etc. Some useless?

Anyway good luck to all radio amateurs, whatever their field of interest whether it be ragchewing or the latest in laser transmission!

Terry S.

By Law, You should have received (and signed) a copy when you bought your
house. If you didn't, you should ask the attorney that represented you at
the closing why not, he was there (supposedly) to protect your interests and
make sure you got that stuff.

with a radio is spying on them.

Anyone with a radio is SPYING on them? Wonder what the hell that means. Absent any interference, traffic obstruction, or disturbance, what could be illegal about watching what the police do...whether you're carrying a scanner, a loaf of bread, or taking your dog for a walk. They gonna cite people for LOOKING?

Here's a recent article about an enlightened police department in Califonia from the Marin Independent Journal, 8/18/2000:

Robbery could lead to life terms

By Con Garretson

The two suspects in dramatic robbery of an Old Navy clothing store in Novato have extensive criminal histories and could be sentenced to life in prison if convicted on new criminal charges filed yesterday, prosecutors said.

Sharon Brewer, 40, and Edward Jerome Jones, 45, both of Oakland, were arrested at gunpoint on the side of southbound Highway 101 after taking $682 worth of merchandise from the clothing store in the Vintage Oaks shopping center, authorities said.

Bewer and Jones have two prior felony convictions that count as "strikes" under California's "three strikes" sentencing law. As a result, convictions in this new case could result in sentences of at least 25 years to life, according to Marin County Deputy District Attorney Linda Witong.

Brewer was arraigned in Marin County Superior Court yesterday on charges of robbery, commercial burglary, grand theft and additional legal enhancements based on her criminal history, including convictions for grand theft, attempted robbery and robbery using a gun in the early 1980s.

Witong said Brewer also is on felony probation for a theft conviction in February and a conviction on the robbery charge could result in a 30 years-to-life sentence for her.

Jones was arraigned in court on charges of commercial burglary and grand theft, as well as additional criminal enhancements for a criminal career that includes three bank robbery convictions in the 1970s and 1980s.

All of their prior convictions took place in the Bay Area, Witong said, but none of them were in Marin.

Witong said bail was increased to $650,000 for both, from $50,000 for Brewer and $300,000 for Jones.

Police said the two suspects placed several shirts in a shopping bag and tried to leave the store without paying for the merchandise at about 3:40 p.m. An employee confronted the pair, a scuffle broke out and the suspects fled and jumped into an older model yellow Mercedes, witnesses told police.

A tip from an alert citizen led to their capture.

"We had a great citizen who helped us out," Novato police Capt. Reggie Lyles said. "This guy was in his car listening to his (police) scanner and he observed the car. He got on his cell phone and told us our suspects were headed southbound on Highway 101."

"We were really blessed that he did that. It just speaks to why our community is so safe, because we have such solid people like him out there."

Lyles said his officers have been "especially sensitive" of potential crime activity at Old Navy in light of at least half a dozen thefts there in the past four months.

Three weeks prior to the arrest of Brewer and Jones, another person was arrested in her car with merchandise stolen from the same Old Navy.

Eboni Camille Thomas, 23, also of Oakland, was charged yesterday with grand theft in that case, Witong said.

Thomas was arrested on July 26 on suspicion of grand theft. Another woman driving her car pulled into the path of another car on Rowland Boulevard, resulting in a minor injury collision, police said.

Witnesses told police Thomas was seen running out of Old Navy with 36 shirts, which were later valued at $764. The shirts were found inside the would-be getaway car but there were initially problems establishing a criminal case against Thomas, police said.

However, Witong said further investigation revealed sufficient evidence to charge Thomas with felony grand theft. Thomas has been out of jail on $10,000 bail since the day after her arrest.

After Thomas' arrest, an Old Navy employee said the recent crime spree at the store was not coincidental but was tied to a "huge (crime) ring" targeting the Novato outlet based on knowledge of that store's security practices and the retail chain's merchandise return policy.

And?

Sounds like?

Your point?

Are you trying to prove that capitalism is inherently evil?

Sorry but I just can not buy into Communism; I've been "behind the wall".

I can understand your [Helmsman@noguts.coward.commie] point of view but - as stated above - I just think that the government of your people in China and Cuba and VietNam and North Korea - is immoral.

I - intellectually - can understand your personal need and hunger for an absolute and an "iron-clad" "truth" but, I assure you, communism is not the "answer".

Keep reading and looking (and THINKING!).

Are you - have you been deemed- "humor-impaired"?

You might try reading that post about a hundred times and - if you don't
figger it out - turn yourself in because you are truly "humor-impaired".

As far as "gaynet"/"swishnet" on 3.950 goes, these "girls/boys" have the same
right to the airwaves as anyone else!

Hehe,
Good one. Of course, what makes your post so funny
is that an anonymous goon who writes about "Negro's" [sic],

especially on THIS newsgroup, is 100% sure to be semi-literate,
and about 99% sure to be one of those white-supremacists
who thinks he's some sort
of ultra-patriot capitalist for hating them there "Negro's" [sic]
and foams at the mouth about "Red China" and such.

[But I'm sure he's all for "Negro's" as long as he gets to own one...]

Where is the Soylent Green factory when you truly
need it?

Well, before we get too over-confident, take a look at the latest poll results that have him up 5%. I guess that lip-lock he planted on old Tipper swayed a lot of the moron vote.

Listen to his message. Did you know that the bottom 50% of the taxpayers pay 5% of the Federal income tax? They are net beneficiaries of Gore's utopian "reinventing government as your nanny" giveaway programs as set forth in his speech.

If those 50% vote, and the birkenstock-wearing, NPR-supporting, Learjet liberals add their bleating voices, it'll be Gore for the next eight years. And the top 5% of taxpayers, who pay 33% of the Federal income taxes, can like it or lump it.

I was able to reset the CPU, but I have another problem. I can't receive
but I can transmit. Here's the story. I am transmitting on 145.200 and the
spectrum analyzer says my freq. is 145.200 and the radio display says
145.200. But when I inject a rf signal at 145.200, nothing happens, it
doesn't open the squelch even I adjust the output signal level to -50dbm.
Then I tried to sweep the rf signal gen. from 140.000, I was surprised to
get a clear signal at 140.700 (radio display is on 145.200). What could be
the problem? I don't have the schematic or service manual of this HT so if
someone can tell me if there are any adjustments required to get the rx
freq. straigthen out? I can see only few adjustable pots and adjustable
coils inside. For what they are, I really don't know.

Please help......

TIA,

Max

Listen up John,
I no longer have the time, or the energy to be trying to
reason with the stubborn brick wall that is you.
So, I will put it succinctly and then I will terminate this
conversation.

FACT, in September of 1992, Bill Cheeck was elected
by ops council as head of scannradio fidonet forum.
within 2 weeks, you had made such an uproar, that you
were asked to leave. You refused, and were therefor banned.

Fact, within 2 months, you appear on the internet
USENET berating your situation, blaming Bill cheeck for it all
and generally making an ass of yourself. Since then, you haven't
shut up.

FACT: you continue to deny your actions, even after you pulled them
on others IN FULL VIEW of the usenet public.

FACT: Dejanews has full copies of all your exploits dating
back over 8 years!

FACT: in the last 2 months, you have posted a sum total
of 672 times, with only 5 articles ON TOPIC for any of the usenet
groups you posted to.

FACT: you claimed to have degrees, yet a check of the online
databases that carry such information reveals that your name
is "mysteriously abscent".

Igiven all this, it has been determined by many people
that you tend to tell lies all the time. It has become such a
habit with you that you no longer are able to distinguish
between reality and your.own fabrications.

Now, if I sound like I a a little irritated, thats because I am
(and its not even related to you at all). I have just spent the last 4 days
pouring over information I need for starting a small busines, I haven't had
much sleep as a result. Therefore, such childishness as you CONSISTENTLY
display, tends to further aggrevate an already tense situation.

It is because of this that I will simply break off communications,
place you in a kill filter (along with all of your known aliases) and
put paid to your musings on a more permanent basis.

I am done with you John. I'm putting you away (just like
any other toy).

Consider this my parting shot.

Good day.

HI,I am wanting to buy a new ht1250 that is still under warrente.It has to have the newer firmware.I have found one for 450 with acc. If anyone can beat the offer e-mail me.

Sent via Deja.com http://www.deja.com/
Before you buy.

5478. MACKEY LIES Day 2635

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-26 00:00:00 UTC
From: larson@sofcom.com
Message-ID: <8o8q91$t4e$1@news.netmar.com>
Source record: 104517

John-Corky does lie, the extent is what startles a guy. Since I posted the stats so kindly reposted by mark, John-Corky has posted 289 messages and name changed to dodge the killfiles 3 times.

Keep those cards and letters going out to abuse@home.net and don't forget the ARRL. I'll stick with CBing if John-Corky is representative of Ham radio. I would not trust him giving me a test and this OO thing. I read about it at www.arrl.org. It is nothing but a volunteer postion. Mackey didn't earn it or get honored by it. Volunteer, take the test, pass and you are an OO. Any person can be an OO, but John-Corky proved that.

5479. Something about John-Corky KS0F

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-26 00:00:00 UTC
From: larson@sofcom.com
Message-ID: <8o8r62uik1@news.netmar.com>
Source record: 104518
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

In article Eric Oyen <n7zzt@home.com> writes:
>Listen up John,

He can't his mouth is still open airing the gap out.

>FACT, in September of 1992, Bill Cheeck was elected
>by ops council as head of scannradio fidonet forum.
>within 2 weeks, you had made such an uproar, that you
>were asked to leave. You refused, and were therefor banned.

I can verify that. Also John-Corky's BBS that carrie Fido agreed with the ban.
Fred Hatfield also a moderator at one time banned Mackey.

>Fact, within 2 months, you appear on the internet
>USENET berating your situation, blaming Bill cheeck for it all
>and generally making an ass of yourself. Since then, you haven't
>shut up.

He stalked Bill Cheek until his death.

>FACT: you continue to deny your actions, even after you pulled them
>on others IN FULL VIEW of the usenet public.

John-Corky is the example of thriving on negative attention. He has nothing to
offer, no expertise so must be disruptive to get the only attention availble
to him. Most people get over this at the age of three or four years old.
John-Corky is a slow developer.

>FACT: Dejanews has full copies of all your exploits dating
>back over 8 years!

It seems to only show Mackey-Corky back 6 years. He will use this one point to
focus on though. No denial just diversion.

>FACT: in the last 2 months, you have posted a sum total
>of 672 times, with only 5 articles ON TOPIC for any of the usenet
>groups you posted to.

That is quite generous on your part. I couldn't find but 2 and they were
mindless.

>FACT: you claimed to have degrees, yet a check of the online
>databases that carry such information reveals that your name
>is "mysteriously abscent".

If John-Corky had anything he would have posted a binary of the group by now.
John-Corky is a nothing. He is a VE and a OO and the PR for the jr high PARG.

That is it. Other than that and 400+ messages of BS a month, John-Corky is nothing.

>Igiven all this, it has been determined by many people
>that you tend to tell lies all the time. It has become such a
>habit with you that you no longer are able to distinguish
>between reality and your.own fabrications.

He knows he is a lie. He wakes up in the morning knowing he is a loser and goes to sleep feeling the same way. The boy is ignorant. A Buffon. A lie.

Timmy

Ashamed to say what you do for a living doesn't strike me an abundance of credibility John-Corky. You major acomplishment was posted as a binary a worthless ARRL OO certificate. If you had a college degree you would have posted it years ago, you are ashamed, no post. If you didn't change bedpans you would have posted what your employment is. You didn't. Your title. You didn't. You are nothing. You are a nothing.

>> I'll post my data and then leave the scanner groups forever.
>> Here are the terms again, just in case
>
>Richard, I don't care what you do.

Yes you do. You respond every time. It eats you that all these people know more than you. Have better jobs than you. Have better lives than you. Most every one here Corky is better offthan you.

depending on the distance you're trying to cover and the terrain,
you're probably better off ignoring amateur radio technology
(20-year-old converted taxi radio stuff) and use the cheaper, more
reliable, and faster devices found in the part 15 world.

using part 15 devices, you could cover up to 10 to 15 kilometers on a
good day and your data rate would be somewhere between 500Kbps and 1
Mbps. Estimated cost would be approximately $300 per node. Running
9600 baud in amateur radio world would run you $600 per node.

So, as you can see, it cost more and you get lower performance if you
use standard amateur radio packet technology.

Another nice thing about part 15 devices is that you get to use
standard software usually following most of the Internet RFC's. This
will reduce your development time for your applications. Packer radio
software is not so nice and would probably require major
infrastructure creation before you can start on your application.

good luck

5497. New ham has question, please help

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-26 01:54:22 UTC
From: pete4www@juno.com
Message-ID: <8o7808$61a$1@nnrp1.deja.com>
Source record: 104486

Hi, I just put up my 2-6 meter antenna and I have a quick question. I need to run a wire from the antenna to the copper ground rod. I found some good thick copper wire, which is not insulated, and I found some even thinker galvanized wire (the silver colored kind) which is insulated with thick clear plastic. Which wire would be best for connecting between the antenna and the copper ground rod? If anoyone could please respond, I would appreciate it. Thanks,

-Pete

REALLY?,
care to explain this BALD FACED LIE?
You've been in nearly a constant war of words with bill cheek since he
kicked you out of the scannradio forum on fidonet way back in the
early 1990's!

Dejanews can also confirm your track record, John!
and you refer to me as a LIAR?!?!

Herman Georring -- "If you tell a lie, large enough, for long enough, eventually

all will come to believe it as truth!" (Berlin meeting, july 1937).

Remeber this john--> "those who ignore the mistakes if history will be doomed
to repeat them" -- Alexander the Great

I just love it when you tryo yo quote out of context, john.
your ineptitude makes itself quit apparent when you try.

You may call this troublemaking, but then, you always assume you are right
and everyone else is wrong.

Howdy,

I'm auctioning my cherished old TM 11-826 tech manual on eBay.

It's item number 420029108. Or search for word BC-610.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=420029108

is the URL. Take a look.

I am very interested in this mode of communication as I have an both an old 386 laptop and a Macintosh SE. I have been told the 386 would be fine for packet but how about the mac? It is old as anything. Can anyone point me in the right direction as far as TNCs and other general information on packet? For the laptop to work I would need a modem with a parallel connection as the mouse goes into the serial port. Any help is appreciated. Thanks!!

Actually as far has 2 meter mobiles units go you can not go wrong with the big three, Yaesu, Kenwood or Icom; new or used. Even Alinco can be thrown in. It is all a matter of personal preference; like a truck/car--Chevy, Ford or Chrylser or Toyota, Honda and Mitsubishi. You get the idea. It all depends on how much you want to spend and what features you need and what you can live without. I would order a catalog from AES or HRO and browse through it. Good Luck!

No it was lazyiness

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me
and others on ham radio, hear a typical ham contact. 8. The warm side of
K1OIK, hear me speak, see me with famous people. 9. An amazing card game
that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

< http://www.mdstud.chalmers.se/~md2nicke/MISSUPPFATTNINGAR/skalper.html>

scalping,

removal of all or part of the scalp, with hair attached, from an
enemy's head. Although best known as a practice of North American Indian
warfare, scalping was not exclusive to the Indians. The Greek historian
Herodotus attributed the practice to the Scythians, and some western Siberian
peoples and possibly the ancient Persians may also have scalped enemies.

Scalping was not common to all American Indian tribes, and some authors
question its presence in North America before the arrival of whites. The
custom was probably confined originally to a limited area in what is now the
eastern United States and around the lower St. Lawrence, as well as an area
in the Gran Chaco country of South America. The practice spread over much of
central and western North America as a result of bounties offered by the
French, English, Dutch, and Spanish colonial authorities for the scalps of
enemy Indians and sometimes of enemy whites. Many American frontiersmen and
soldiers adopted the custom.

The importance of scalping varied. For Southeastern Indians it was necessary
to take scalps to become a warrior and to placate the spirits of the dead.
Most Northeastern Indians valued captives more than scalps. Among Plains
Indians scalps were taken for war honours, although such practices as
touching a live enemy accrued more honour to a warrior.

Scalps were usually taken from dead enemies, although some Plains Indians
preferred a live victim. The operation was not necessarily fatal, and some
victims were released alive. The scalp was sometimes offered as a ritual
sacrifice or preserved and carried by women in a triumphal scalp dance, later
to be retained as a pendant by the warrior, used as tribal medicine, or
discarded.

Wouldn't be the first time that a cop made a mistake. Recently had a
case here in Arkansas in which a state trooper arrested a guy for
giving him a middle-finger salute. The guy won in court, so far, and
the cop was fined $4,000, but they may appeal it later, too.

So some Tech or another who usta be all over 2M upgrades and gets on 20m
instead with his General-Lite. He's gonna now be "protecting" our bandwidth
by being on both bands at the same time or what? The biggest favor we could
do for those who clearly covet our vhf and uhf freqs would be to pass out
completely test-free HF ham tickets. "We" just took a big step in that
direction. DO them there upgrades, jump on 20 and play right into their
hands . . .

As BARF Communications chief, I must pass on some bad news.

Hello All... This is Walt KQ0M
I have some bad news concerning our friend Seymore. WA9KJB.
Seymore is in the hospital in bad shape. He has a large tumor on left lung
and in his liver. Its inoperable.
Monday will be a bad day to call. Today is the best for that.
Seymore is at:

St. Lukes Hospital
Mr. Seymore Lynch
222 Woods Mill Road
Chesterfield, Mo. 63017
Hospital Phone # 1-314-542-4919

Home Phone # 1-618-656-3324
Home Address is: 547 Olive Street
Edwardsville, Ill. 62025

I'm sure Seymore would appreciate a call or card.

Walt.... KQ0M

Got a problem with it.

Get an amateur radio license plate.

Problem solved...

Although, I would sue if I was being harassed for having an antenna on my car.

I went through similar problems in So Cal when I lived their. If you had a CB antenna on your car, and where out after 2 in the morning, you would be pulled over, and your car searched for illicit narcotics, just "because most CBers are drug users in this area".

OK guys, you have all had your fun & a few moments in the spot light by causing trouble & heartache for the members on these newsgroups.

I challenge all of you to simply STOP your trouble making posts for 2 weeks. Then
perhaps we will keep it quiet even AFTER that 2 weeks.

It's that simple, JUST STOP! Let this newsgroup have a rest.

15th??
> >

"what thousands"? I refer to the data the other individual expounded
on... but yet, I digress, and quote him .....

For example: there are now just over 15-thousand more Extra class hams
than
> a year ago. That's an increase of a solid 20 percent. And the
general
> class is up by nearly 18-thousand. ..

I believe there are TWO sets of "thousands" in that, one is 15, the
other is 18.

>
> > to give
> > our hobby more clout and make it harder for the corporate mongers to
> > snatch them from us, as they already have done with other
frequencies...

> > >
> So some Tech or another who usta be all over 2M upgrades and gets on
20m
> instead with his General-Lite. He's gonna now be "protecting" our
bandwidth
> by being on both bands at the same time or what?

No, of course not, nor would any objective reader assume that I implied
that a person would be talking on two bands at once. You see, here's the
process; you quit talking on one band for a while, then change

frequencies, then talk on another band. Without the upgrade, you couldn't "talk on the other band". that's pretty clear, I think. As far as HOW he would be likewise protecting them, well, think of what happened to the 220 vhf band.... had it been more utilized, it would have been harder if not impossible to strip the lower 2 megs from us (as they did) for the UPS.

The biggest favor we could
> do for those who clearly covet our vhf and uhf freqs would be to pass out
> completely test-free HF ham tickets. "We" just took a big step in that
> direction.

The premise of your argument is false, and that is that I stated we should give tickets away. You see, I didn't do anything of the sort; I said we did well by MODERNIZING it. Funny, the pro code test crowd sees no "grays", only black and white; they feel that the ONLY way to accomplish testing correctly is via morse code profeciency tests.

DO them there upgrades, jump on 20 and play right into their
> hands . . .
> >

that's what your oppinion is; fortunately, the facts of reality are not based on your erroneous logic.

>
> >
> > Kindly explain what an increase of 20% in
> > the Extra
> > > body count does for ham radio??

you just contradicted yourself; your first message was to refute that there WERE no extra "thousands". But i'll overlook the illogic of this post to explain... the more people there are in a "lobby", as it were, or in this case, a hobby, the more clout they have, thus the more difficult it is to usurp or take from them... if there was no modernization of testing requirements, then the numbers of people in ham radio would have either dropped over the years OR remained at a stagnant number; and while remaining at a stagnant number may seem an honorable goal, it fails when you shed the light of reason on it for one simple fact; the non-ham world accessing the radio band frequencies is GROWING.... if we do not grow to match, we'll be overrun.

> >
> > I believe I just did that.... have you read all the NG posts were "ham

> >
> Yeah, and all it's all bullshit to the core. There have been much
deeper
> drops and stagnations in past periods, long before you had a clue yet
ham
> radio lives on and grows.

"long before I had a clue"... good thing you have had
information-gathering services following me all my life and intelligence
gathering gadgets and doo-dads installed in my house, vehicle, and work
place to closely monitor everything I know and have experienced.
Otherwise, a statement like that would be quite verbose; I'd hate to
think I could run into a random person and instantly judge what they do
and do not know, without getting to know them better.

> >
> >well, the over all
>
> > number of hams may not have increased,
>
> >
> What else really matters??

and, praytell, why does it matter? WHY is it a good thing for numbers to
increase? that is my point.

> >
>
> > but at least more bands we have
> > given to us are going to have more ranks of users to help us keep a
hold

> >
> What corporate entity, technology sector or government has declared
that it
> has any interest at all in taking our HF bands away from us? We'll
get more
> HF bands before we get fewer and that's already in the works.

With a growing number of corporations and interest groups that require
access to radio frequencies, the room will tighten up and they'll look
everywhere including HF... shortwave radio is still vital and strong
today.

I don't see how, but alas, I digress once again and explain.... you
just said the following statement...

The only "gains" were and still are
> > strictly
> > > personal, exclusive access to a few miniscule chunks of HF
spectrum in
> > the U.S.

and my retort to that is that it is YOUR oppinion, that those are the
only gains, and not indicative of the real strength and importance of
what the restructuring can and has given the ham radio hobby. I'm sure
your first response to this is "and what is your oppinion of what
restructuring has given us?" (that is, if it didn't start included
vulgar and profane personal attacks).... well, if by now you haven't
grasped what my thoughts on this are, you have simply closed up your
mind too much due to sour grapes and hateful thoughts due to
resturcturing and the modernization of ham radio licencing, ostensibly
through the removal of the outdated CW testing requirements.

what has happened = increase in licence upgrades. I'm sure nearly
anybody else reading my post new what I was referring to, but from now
on, when corresponding with you in the newsgroups, i'll assume ahead of
time your memory is this short (or selective) and repeat every single
bit of data before referring to it, ad nauseum.

no, they care enough about ham radio; just not YOUR version of what it's
suppose to be about. More of that "black and white" wall of
irrationality there.

Sounds like a bunch of local "bubba's" harrasing you and waiting for you like vultures for you to screw up
so they can pay for their news radio's that you won't be able to listen to.
It's amazing how those who have the most protection (guns and ammunition) are those who are in most need
of being taken out of the gene pool. Also, it's amazing that those who need to be monitored the most are those
who are trying to make monitoring illegal.

5538. Radio Install

I've just ordered a couple of new vehicles, 2001 Pont Bonneville SSEi for K0CKB and 2001 Chev Silverado LT for me. Both vehicles look like they will present a chellenge in installing radios in view of the driver. Have any of you solved this? (Both vehicles are exact duplicates of 2000 models.)

The initial assault was planned on Bush's watch. When Clintoon took
over, nobody changed the plans or (apparently) bothered to let the new
administration know about it.

Bush is responsible for the initial assault.

Clintoon is responsible for the final solution.

Clint, let us get a couple of things straight:

1) In my 56 years I have managed to acquire both a real coded Extra and an education. I have no intention of apologizing to you or anyone else for using them.

2) My point was simply that the stats supplied prove more the opposite than the point the writer appeared to be making. Do you care to comment on the points, either one, or are you in babble-mode.

3) While I have no particular love for NCI, I have stated on the newsgroups many times that I expect and in fact support a no-code Extra. Your idiotic terrorist statements are at the very least a bit mis-directed.

Should you wish to carry on a sane debate, feel free. Should you wish to engage in a bombast exhibition, feel free as well. Just try not to confuse the two.

Funny thing, this... it's true...

When I was an OTR Truck driver, I had a dipole antenna for 11M on the passenger mirror of the T-600. I think I was pulled behind the "chicken coop" (Weigh Station for those who aren't familiar with the lingo) at least 8 times, just because the scalemaster wanted to see what kind of contraption I had hanging off my truck... This was usually accompanied by a level 2 truck inspection, as well, and they had the "puppies" out sniffin, too. I didn't mind, really. I usually ran legal, and never carried contraband, and it gave me a chance to step out of the truck, sit back and chuckle at an idiot who thought we was gonna get the bust of the century.

At least it kept a few of the other trucks out of the coop for awhile, while they messed with me for no reason. ::chuckle::

Now aren't you glad they're spending your tax dollars in such a haphazard fashion?

Perhaps. But in today's junk society, you will likely create more serious problems by doing so.

"Road rage" is now an everyday occurance in most medium and larger-sized American cities. Make a wrong move in traffic and you're likely to be shot for your trouble.

The *LAST* thing I want is my callsign displayed on my vehicle. Doing so would be an open invitation to any stalker or freak of nature to show up unannounced at my front door, brandishing a loaded 9mm at 3AM. No, thanks.

Sounds like what happened earlier this year down around the Flying J
and Pilot truck stops on the south side of Indianapolis. Of course,
myself and a couple other truck drivers caught a Smokey Bear running
some inordinate power behind the McDonald's, jamming channel 19... I
walked up to his police car, and he just drove off. Wonder what the
legality of THAT situation was...

About this scanner business!

Two points. 1 and 2. And a comment 3.

1) Surely the police transmissions are 'scrambled'? Even in this 'little o'l corner' of North America our local police transmissions are! Sounds like Indiana needs some modern equipment! Also sounds like the Indiana police don't read the regulations? I'd love to see that in court; "Now trooper Smith will you please demonstrate how the; 'SCANNER', I think you called it, receives police transmissions". "Oh you don't know how to work it? Well how do you know it's scanner then. Maybe it' a jar of marmalade, or a CD player, or part of a computer ..... .or ..... ?"

2) The title of the posting says "arrested". However the quote of Indiana State laws says something about a "Class B misdemeanour". Can a person be 'arrested' for that? Or just ticketed?

3) Boy oh boy there sure are some restrictive laws in "The Land of the Free"! Can't put up antennas in residential areas, can't 'possess', let alone 'use' a scanner! BTW there appears to be some truth to that comment about some drivers avoiding certain US states; my neighbour who is a trucker has US and Canadian trucking contacts; he mentioned to me several years ago that his 'buddies' say they avoid driving in certain states if they can. Even driving longer distances at the cost of more fuel, or in some cases declining to haul a particular load within a particular area! So I've heard it up here before; as I said, in this little o'l backwater.

Two cents (Canadian): That's less than one and a half cents in your 'real' money!) from here.

Your Canadian Cousin. Eastern Canada.

Actually, the federal premption for hams ONLY
specifies amateur transcievers which have
extended recieve capability. If N9VKS actually
had a scanner in his car, then the law in Indiana
may actually apply to his situation.

Just relating the facts, don't kill the messanger.

Cheers,
Bill K2UNK

Funny you should mention that... My all time record for not having to go thru any chicken coops was 6 months, 1 week, and 5 days. No, I wasn't dodgin the nest, and no, I wasn't just driving at night. Just got lucky, I guess.

Driving's a thing of the past, for me, now, thanks to that DU who was runnin from the cops, hopped the median, and pinned me in my truck for a little over 6 hours. Oh, I might be able to take a local job, but who really wants to deal with shippers and receivers all day long? ::Grin::

Just my two cents.

That's not gonna happen.....trust me on this.

My company sells radios to terrorist and drug smugglers. We sell only
the best seneca systems to our underworld clients. Some companys will
sell ham radios to third world countrys, but that ham gear is cheap and
is not durable in the hands the 12 year old rebels.

Now forget I was here or I will have to kill all of you on this ng.

Dont forget that today's silly "cell phones" are based upon ham repeater towers that have served them well for decades prior to the development of cell phones in cars, then portable phones using the same technology.

And, Hams are always working on new inventions, too. Laser communication is being developed even now by many hams. Bouncing beams off clouds, dust particles, and even the moon has brought about new ideas and new inventions.

Laser towers are now transmitting the net to homes with receivers on their roofs. What does the future hold using even this technology? Who knows! But we know that Hams will be on the cutting edge of future communication technologies!

There must be more to this story because Indiana, like a lot of
states has an exemption for licensed amateur radio operators. Below is a
copy of the appropriate statute

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police
emergency purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement
agency;
commits unlawful use of a police radio, a Class B
misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose
vehicles are used in emergency service;
(4) a public service or utility company whose
vehicles are used in emergency service;
(5) a person who has written permission from the
chief executive officer of a law enforcement
agency to possess a police radio;
(6) a person who holds an amateur radio license
issued by the Federal Communications
Commission if the person is not transmitting over a
frequency assigned for police emergency
purposes;
(7) a person who uses a police radio only in the
person's dwelling or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering
activities;
(B) who is employed by a newspaper qualified to
receive legal advertisements under
IC 5-3-1, a wire service, or a licensed commercial or public
radio or television station; and
(C) whose name is furnished by his employer to
the chief executive officer of a law
enforcement agency in the county in which the employer's

principal office is located;
(9) a person engaged in the business of
manufacturing or selling police radios; or
(10) a person who possesses or uses a police radio
during the normal course of the person's
lawful business.
(c) As used in this section, "police radio" means a
radio that is capable of sending or receiving
signals transmitted on frequencies assigned by the Federal
Communications Commission for police
emergency purposes and that:
(1) can be installed, maintained, or operated in a
vehicle; or
(2) can be operated while it is being carried by an
individual.
The term does not include a radio designed for use only in a
dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by
P.L.162-1994, SEC.1.

The Houston PD deals with this differently. They broadcast the request
for the tow directly over the PD channels to the tow truck. The drivers
listen on the scanner and the first guy there gets the call. The
dispatcher then cancels the request.

The question I keep asking (but no one has answered) is just *how* did
the police determine it was a scanner? I'm assuming that police are like
the general public and wouldn't know a 2 meter handheld from a PopTart.

Is this like the people who grow pot, TELL everyone they are growing pot
in the hopes of getting arrested and making a case out of it?

I mean, did the guy want to make a case out of this or was he just an
idiot who told the policeman, "look at my shiny new handheld, it can
even pick up police signals"?

Source record: 104394

Just a few personal observations/experiences.

Those of you who know my history know that I travel almost every weekend throughout Indiana and surrounding states, March through October or so as a musician. In all my travels, I've never been without several antennas on my vehicle...and have never been stopped or questioned about them. Once I was stopped at a sobriety roadblock with who knows how many other vehicles, and had a rack or radios mounted on the transmission hump...the ISP (Indiana) officer gave then a cursory glance, looked at my drivers license, and told me to drive safely. One of these radios was a trunk tracker scanner.

I'm also seldom without a handheld scanner. I keep Purdue Football season tickets (GO BOILERS!!) and always have a handheld scanner on my belt before, during, and after the games, to listen mostly to the banner tow aircraft but also to security, and have never been questioned in 10 years. As a big sports fan, I've also taken handheld scanners to Reds games, Colts games, etc etc, multiple times, and, again, have never been questioned in any way.

It does make me wonder if there is more to the original story than we might know.

I'm not blatant about my scanners, but in no way do I try to conceal them either, which might only make matters worse, IMHO, to try to hide them. I do always carry a copy of my ham license with me, and the scanner law of the states I travel in are always in my glove box, just in case.

Just my .02 worth :))))

Not entirely true. Ruby Ridge was before 'Bill' and the blame for it should
lie squarely on the Bush administration. Waco was started under the Bush
administration and was finished under the Clinton administration.

What's impressive about it?? Kindly explain what an increase of 20% in the Extra body count does for ham radio?? Upgrades to Extra don't mean squat now as far as the "welfare of ham radio" is concerned any more than it did in 1968 in the Incentive Licensing maneuver. The only "gains" were and still are strictly personal, exclusive access to a few miniscule chunks of HF spectrum in the U.S.

>
Ditto upgrades to General except that today the rewards are greater which once again only benefit the licensee.
>
It's the number of new hams is the only stat worth watching and that's apparently gone up only 0.5% - and it's been possible to pick up a ham ticket with ZERO wpm for nine years. "Apparently, the CW requirement was nearly strangling amateur radio". As if. All it ever did was affect upgrades which Maia's stats vividly illustrate . . . same fish, same tank . . Zzzzz . .

When you take the gee-whiz capital letters from your troll, we are left with what a long-ago professor once referred to as 'statistical flatulence' -- farting around with numbers.

1) The .005 increase in the total annualizes to about 1.5% which certainly belies the myth that there are all these wonder-Techies lurking about waiting for the CW requirement to disappear. In fact, compared to recent years, it falls somewhere between disappointment and disaster.

2) So 33k hams -- 5% of the licenses -- accepted the gift in 4 months. When the effort involved included at most one written exam even if one were already Tech Plus (and had 3 mos lead time), this sort of turnout might be interpreted as one of life's wetter firecrackers.

The code requirement beyond the 5wpm to serve the needs of the treaty was in fact obsolete, but accusing it of strangulation is supported neither by your data nor any other objective fact.

While signing a name to the troll, presumably yours, does lend some weight to the missive, the lack of a call sign might be interpreted by some as the bleating of some lost sheep with more opinions than experience.

> showed them my license.

I was approached once for this in the Steak 'N Shake parking lot in Valpo (the officer heard the radio in my car). I told him that he had the choice of arresting me (I wouldn't sign a citation, if one was written) and having this go through court, or of spreading the word that ham radio operators are legal.

Actually, they have respect for hams, at least in that area (especially during tornado season), but it turns out that most ISP officers are under the impression that hams are required by law to have our calls on our vehicles. Seeing a Camaro with an unusual antenna (I use a Metz), no callsign displayed, and hearing what sounded like police traffic (it was actually Civil Air Patrol) got his suspicions up.

This led to a 10-minute lecture for he and some of his buddies on amateur radio, and how to tell the difference between a ham antenna and a CB or scanner antenna -- and on the different series of callsign (their eyes glazed over for a bit when I explained that not all calls start with W or K, and how many different callsign formats there are).

The word DID get around, I guess -- ISP guys I don't even know wave at me all along that stretch of road.

By law, you were to have been given a copy BEFORE YOU SIGNED THE
PURCHASE CONTRACT. Check in your real estate papers.

If you can't find them, tell the HA that you've been told that you need
a copy with your papers and your will, so that your survivors can deal
with the place if you are suddenly killed.

> amateur radio, as this proves.

to make sense out of those numbers and support your claim you need to know how many of each of those upgrades were tech+ to general paperwork only upgrades(probably a very large percentage from what i have seen), and general/advanced to extra written test only upgrades(probably almost all of them). then compare that to new licenses that skip tech and go right to general or extra(a very small number from that report since there were very few new licenses over all).

there has been a no-code entry license for years so this change would not be attractive to most non-hams who haven't taken the tech route for all that time. all it did was to make it easier to upgrade, which is pretty much what it looks like is happening... as expected. the real test will be how many of those new generals and extras will make use of their new privileges. have radio manufacturers reported a surge in hf rig sales? do you hear lots of new calls in the advanced/extra band segments? or are these just people taking advantage of the change to upgrade without any real plan to use the new privileges?

That is NOT illegal!!
The key word here is the word "incidently".
This is an AMATEUR RADIO that INCIDENTLY recieves police signals.
Scanners are NOT protected!!!!!!!!!!!!!
Amateur Radio's in the possesion of a licensed Amateur's ARE.
And whether it is or is not considered a scanner or is an AMATEUR
RADIO is also up to the FCC not the local hicks!

Actually, Richard, there is often significantly more effort required.
I've been planning to upgrade since the change, and have been unable to
get into town for sessions, been unable to reach VEs running "prior
registration necessary" sessions, and so on.

It has reached the point where I am giving serious consideration to
taking time during an upcoming trip to Los Angeles, because there is a
"drop-ins okay" session only 30 miles or so from the meeting I am going
there for.

You might want a copy of this also. It shrinks up pretty good and a
laminated copy isn't much bigger than a credit card. It also pre-empts
the locals, city or state.
FCC PR DOCKET 91-36 August 20 1993

But is apparently now being used by police to harass ham operators.

For the record, I travel extensively. When given a choice of two or more equal routes, I will not travel through either Indiana or Kentucky because of their restrictive, intrusive scanner laws. That means they don't get my gas taxes, sales taxes, motel taxes, etc., because of their attempts to interfere with my right to receive radio signals within their jurisdiction.

They don't. But that doesn't stop the harrassment and false arrests. Just ask the teenage kid who was stopped in Kentucky a few years back while riding his BICYCLE! The radio in question was a Radio Shack HTX-202 2-meter handheld (which cannot even be modified for out-of-band receive) and the "suspect" was a licensed ham. The radio was confiscated and charges were filed against the teen.

Hello everyone, I just seen this post about this particular ham being arrested for having a police scanner in his automobile. Considering that I live in Indiana and go under the call of W9SUN which is my FCC assigned call sign for usage in the amateur service, I would like to make a few comments. I have read the law from the state of Indiana regarding possession of a scanner. It is not illegal for an amateur radio operator to possess a scanner in the state of Indiana and use it in a mobile setting. The key to this is that state law says that an amateur operator who has been granted a license from the Federal Communication Commission can possess one as long as they are a current FCC licensee. As for myself, I often carry a scanner with me whereever I go just for the hell of it. Anyone in Indiana can have a scanner in their house but in a car is a different story. For you to be able to activate a scanner in a car you must have either approval according to state law or something like being an Amateur Radio operator. So I think what this really comes up to is that either he was doing something else illegal or just a dumbnut officer who didnt know what was going on. Stuff like this needs to be checked out by the ARRL and the FCC and the locals and state officers need to be informed of the laws, not just make arrests based on possession. Its about as silly as being stopped for having an antenna, I guess that maybe they think people are using police radios. It would be that a 2 meter antenna would be very close in frequency to the police bands here locally. Down below I will post the actual law as found in the Indiana Code. So I think that this is either regarding to other illegal activity or just a cop that didnt know his head from his rear. Thanks for your comments.

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police emergency purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement agency;
commits unlawful use of a police radio, a Class B misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose vehicles are used in emergency service;
(4) a public service or utility company whose vehicles are used in emergency service;

---
(5) a person who has written permission from the chief executive
officer of a law enforcement agency to possess a police radio;
(6) a person who holds an amateur radio license issued by the
Federal Communications Commission if the person is not transmitting over a
frequency assigned for police emergency purposes;
(7) a person who uses a police radio only in the person's dwelling
or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering activities;
(B) who is employed by a newspaper qualified to receive legal
advertisements under IC 5-3-1, a wire service, or a licensed commercial or
public radio or television station; and
(C) whose name is furnished by his employer to the chief
executive officer of a law enforcement agency in the county in which the
employer's principal office is located;
(9) a person engaged in the business of manufacturing or selling
police radios; or
(10) a person who possesses or uses a police radio during the normal
course of the person's lawful business.
(c) As used in this section, "police radio" means a radio that is
capable of sending or receiving signals transmitted on frequencies assigned
by the Federal Communications Commission for police emergency purposes and
that:
(1) can be installed, maintained, or operated in a vehicle; or
(2) can be operated while it is being carried by an individual.
The term does not include a radio designed for use only in a dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

Maybe have a friend (real estate agent if u know one) send a letter with SASE requesting the CC&R's as he/she is intending to buy (sell) in the complex. Or check the local recorders office -- I understand HOA's are required to have them on record.

If you haven't bought there yet - DON'T -- as HOA's can invoke an anti-antenna CC&R as a matter of an "unsightly structure" if it doesn't already so state. Also some CC&R's prohibit flagpoles!! Guess they are getting wise to that one.

And there was the day everyone had aluminum on their rooftop!!

The Indiana Code exempts all radios, to include scanners, if one has a ham license, a GROL license, if one is a police officer, a fire fighter, works for the government, is a news reporter. Total exemption except for being able to transmit. And some agencies, like the one I work for, are allowed to transmit on all police frequencies.

snip

If he was licensed and was arrested for a scanner violation then
the only obvious thing that could be illegal is using the information
obtained over the scanner for ones benefit or for an illegal activity.

While I have a certain sympathy for your problem I did all my licensing
either in Omaha or St. Louis where the FCC was in town every 90 days. Show
up at 9 AM or drop dead. Life do move on.

Dick

That's fact. You had it rough, Mon. Here in Philly we at least had a fulltime
Field Office and ya could drop in any time at 9am (or drop dead). Took all mine
in front of Joe Welsh, the local FCC terrorist examiner.
>
First cometh my Novice test on some cold Saturday morning or another and this
scared-to-bejabbers pubescent got called up front in a room full of mostly pros
waiting to take their various shipboard sparky and broadcast tests. Had to do
my 5wpm thing amidst hoots from the crowd about the dorky ham kid holding up
their show. Ya got it 100% right on paper or seeya, kid, QRM or not.
>
Flunked the 13wpm code test the first time, sorry kid, come back in 30 days and
no sooner and try again and he tossed it all into the circular file. Flunk ANY
element, writtens or the code test and ya got to do the whole drill all over
again on the next pass.

> What's impressive about it??

Thousands of new hams to make use of more amateur frequencies, to give
our hobby more clout and make it harder for the corporate mongers to
snatch them from us, as they already have done with other frequencies...

Kindly explain what an increase of 20% in
the Extra
> body count does for ham radio??

I believe I just did that.... have you read all the NG posts were "ham radio is in a downward trend" and "spiraling toward it's doom" because of the flat or dropping numbers of hams every year? well, the over all number of hams may not have increased, but at least more bands we have given to us are going to have more ranks of users to help us keep a hold on it. Believe it or not, it's not just the bands above 28 megahertz we stand to lose.

Upgrades to Extra don't mean squat now
as far as
> the "welfare of ham radio" is concerned any more than it did in 1968

nearly
> strangling amateur radio". As if.

How else can you account for what has happened? Whenever I ask a non ham or entry-level ham about getting a license or upgrading (who are interested in doing so, but say they aren't going to try), they site the morse code albatros around the hobbie's neck, and say they want nothing to do with it. If at this point, you say "oh, well, then they just aren't willing to prove thier profeciency in [what is Brian Kelly's opinion] something crucial to the hobby, well, then I guess you have also made yourself ready to accept the consequences if we do not modernize the hobby. I mean, that IS what you have prepared to do, right?

All it ever did was affect upgrades
which

The WACO assault by the BATF was entirely in the Clinton
adminstration. If you are saying that the laws that were used
as an excuse to justify the original raid were in place during
the Bush adminstration - those laws were put in place in 1934.
And that adminstration was democrat.

(thank you Elliot Ness - BTW he died a drunk)

If any reparations were to be made, it should be between the parties involved. Since everyone involved died long ago, history is set and there is no changing it. As for the American Indian, the unjust actions continue to this day in the form of payment from the government. This payment is not compensation for any previous wrongdoing on the governments part, it is a bribe to keep the American Indian on the reservation, docile and easily managed. To this end, it has been rather effective. The solution to this lies with the American Indian himself, he is the only one who can make his life better. If he continues to except government hush money, things will never improve.

Keith,

Hello to a fellow Civil Air Patrol member! I almost got stopped in In-
diana near Bluffton. I was aware of the "scanner law" up there, and I
think that was why the guy was following me. I did, however, have my
ham call on the back window. I wasn't speeding, so I can't think of
another reason. In North Carolina, Civil Air Patrol issues specialty
license plates (optional) for members, and I had one of those also. I
saw him talking on the radio as he tailed me and he peeled off after
awhile. I'm sure he was interested in the antennas since I had a 2 meter
and a large HF antenna, too.

BTW, as to thwarting "vulture" wrecker" operators, the local county has
am excellent solution. All county wrecker operators are in the police
database. If the parties involved in the wreck don't specify a parti-
cular wrecker, the county calls a wrecker on a rotational basis. The
computer program moves the companies up the "list". The dispatcher then
calls out the one on top. By rotating them, the local wreckers get
plenty of business, it is fair, and keeps everybody happy.

73

Jerry

Seeing a Camaro with an unusual antenna (I use a Metz),

There is another possibility. There seems to be a growing number of
stations that are transmitting "number messages" (string of numbers)
in and around Chicago. You can hear them on 40 metres and 20 metres
in the CW band. I passed a guy up on the Indiana Toll Way who
overloaded my receiver with a CW number broadcast. He looked like he
was from southern Europe and had ham plates on his car.

If this is true, and you must know that there are a number of state
troopers in intel units, then the cops may be looking at hams as a
cover for spying and terrorism commo. Not a great future for us hams.

Hello everyone, I just seen this post about this particular ham being
arrested for having a police scanner in his automobile. Considering
that I
live in Indiana and go under the call of W9SUN which is my FCC
assigned call
sign for usage in the amateur service, I would like to make a few
comments.
I have read the law from the state of Indiana regarding possession of
a
scanner. It is not illegal for an amateur radio operator to possess a
scanner in the state of Indiana and use it in a mobile setting. The
key to
this is that state law says that an amateur operator who has been
granted a
license from the Federal Communication Commission can possess one as
long as
they are a current FCC licensee. As for myself, I often carry a
scanner with
me whereever I go just for the hell of it. Anyone in Indiana can have
a
scanner in their house but in a car is a different story. For you to
be able
to activate a scanner in a car you must have either approval according
to
state law or something like being an Amateur Radio operator. So I

think what
this really comes up to is that either he was doing something else
illegal
or just a dumbnut officer who didnt know what was going on. Stuff like
this
needs to be checked out by the ARRL and the FCC and the locals and
state
officers need to be informed of the laws, not just make arrests based
on
possession. Its about as silly as being stopped for having an antenna,
I
guess that maybe they think people are using police radios. It would
be that
a 2 meter antenna would be very close in frequency to the police bands
here
locally. Down below I will post the actual law as found in the Indiana
Code.
So I think that this is either regarding to other illegal activity or
just a
cop that didnt know his head from his rear. Thanks for your comments.

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police emergency
purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement agency;
commits unlawful use of a police radio, a Class B misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose vehicles are
used in
emergency service;
(4) a public service or utility company whose vehicles are
used in
emergency service;

---
(5) a person who has written permission from the chief
executive
officer of a law enforcement agency to possess a police radio;
(6) a person who holds an amateur radio license issued by the
Federal Communications Commission if the person is not transmitting
over a
frequency assigned for police emergency purposes;
(7) a person who uses a police radio only in the person's

dwelling
or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering activities;
(B) who is employed by a newspaper qualified to receive
legal
advertisements under IC 5-3-1, a wire service, or a licensed
commercial or
public radio or television station; and
(C) whose name is furnished by his employer to the chief
executive officer of a law enforcement agency in the county in which
the
employer's principal office is located;
(9) a person engaged in the business of manufacturing or
selling
police radios; or
(10) a person who possesses or uses a police radio during the
normal
course of the person's lawful business.
(c) As used in this section, "police radio" means a radio that is
capable of sending or receiving signals transmitted on frequencies
assigned
by the Federal Communications Commission for police emergency purposes
and
that:
(1) can be installed, maintained, or operated in a vehicle; or
(2) can be operated while it is being carried by an
individual.
The term does not include a radio designed for use only in a dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

Oklahoma Highway Patrol and a special drug taskforce unit routinely stop
cars with extra radio antennas (especially mag mount) along I-35 as part of
their interdiction effort. I-35 is a heavily used route for the northward
flow of drugs and part of the profile is the "escort" vehicle with radios to
"sniff-out" the police and warn the transport vehicle. I've been stopped
and checked several times.

Because those enslaved blacks are no longer alive.
Don't even THINK about paying reparations to the
ancestors of these blacks. Its unfortunate but it life.

Where would the decendants of the slaves be today if their
ancestors had not been sold in America? They would be in
Africa, their families dying like flies of AID's, running from
constant civil wars, grubbing in the dirt for food while keeping
a wary eye out for lions. They should consider themselves the
lucky ones.

5624. N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-27 01:02:13 UTC
From: 2121d@gte.net
Message-ID: <39a867d8.5276583@news.gte.net>
Source record: 104465
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy,alt.law-enforcement

From the Popular Communications September issue:

There's been a lot of talk lately about exempting hams from state anti-mobile-monitoring laws, but the debates aside, Josh Church, N9VKS of Indiana was ticketed for illegal possession of a police scanner. (No, the words "police scanner" aren't ours, but rather the Hoosier States'). If you've got a tendency to boil over easily, better not read this month's "Tuning In" on page 4, because Indiana bureaucrats don't know a radio from a box of Dole bananas.

I have tried to talk to Mr. Church to get more details of the arrest. I have also spoke with the 1st Sgt of the PAO division of the Indiana State Police. The best I can get from the cops is that the ISP assumes that anyone with a radio is spying on them. No recognition for the public service that hams give (the state's emerency management agency disargees), no recognition that banning scanners is going to cause cops to have to buy units from Motorola for nearly $4000 to do the same function of inter agency monitoring.

Just a fear that the public is out of control.

BTW, I did check. This section of law has only had two appellate cases. And nothing that deals with hams. I guess hams are going to have to give more money to the legislature to buy exemptions.

5625. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-27 02:32:06 UTC

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy

In NJ, possession of a scanner in a vehicle was illegal (2A:127-4).
The story goes that a ham was caught with his modified radio by a
knowledgable police officer and charged (Never able to really confirm
this story), due to the ability to receive out of band. But, in 1993,
this statute was repealed and a new law was created. Under the new
law, possession of a scanner radio is illegal if you commit a crime, or
flee from the scene of a crime.

Sounds like time for the amateur radio community to consider some
lobbying in Indiana.

The trouble with people like you is that you'll believe ANYTHING. Go read the article. There is not a single verified fact in it. It's all speculation, allegation, and unconfirmed rumor. Just like all the rest of the anti-Clinton rhetoric over the last 8 years.

I don't understand people who can't read. The article (if it can believed in the first place) is specific in the difference between the alleged scenarios in China and Vietnam.

Secondly, since when does the President travel to foreign localities aboard ship?

Please contact me concerning some valuable property I have for sale at close-out prices.

Any suggestions as to how I get a copy of my neighborhood subdivision covenants without tipping off the homeowner's association that I want them?

I'd rather they didn't start asking why I want them.....if ya know what I mean!

Get a copy of your home's deed at the courthouse.
I'd be very surprised if any covenants weren't either there or in the
contract for sale you signed to buy the place.

Renee,

This sort of question should draw many answers that will (or should)
interact. Thus I think we should comment here.

"How do contesting stations do it?"

First off, you dont operate on the same band, unless one station is
just for search and pounce and not constantly on the air. This is
assuming your on cw and phone and the rules also allow it.

You need to have your antenna's seperated by as far as possible. Using
a lw on both systems is not likely to work well for this requirement.

You can use attenuaters, isolators etc, these work well, but are not
cheap and do only augment good antenna seperation.

A "serious" multi multi contest effort usually has a combination of it
all.

Now lets get down to your specifics. I assume you both have different
calls, etc.

In many of the contests you can not use more than 1 call for each
location. Some also elliminate using more than 1 radio at a time on
each band. You will need to check the contest rules for each contest.

I would think it would be easier for all to enter under one call (say
the shortest one). Enter as a multi multi and use one position for

search and pounce and the other as the "run" rig.

In anycase have fun. Contesting is a LOT of FUN. I've been doing it for many years. All as single operator. I've got many 1st place wins. All with wires. Go for it Renee.

Dan/W4NTI

Implied consent is a bullshit term for blackmail or the theft of your
rights. The state says driving is a privlidge. F them, we pay for
everything and it's a privlidge? BULL!!!!!
They want to search you they should have to get a court order!
In Michigan implied concent is used to search your "body" for
alcohol content without a search warrant, if you do not submit
to this blackmail without a search warrant they void your drivers
license and in some cases steal your car. (impound and you must pay to
get it back). And by the way you can be stone cold sober!

In the ITU rules, it's said that hams MUST have equipments to verify
that they do not transmit on frequencies of other public services.
So the only way to do that is to have a spectrum analyzer that can be
done with a wideband receiver with a scope function and RS232 output to
monitor the spectrum.
So, evidently hams have the right to have that type of receiver ...

Glenn - You really are a babling FOOL, aren't you??

Glenn, do you want to keep this going? Do you think the NG members would like that? Please TRY to be cooperative for at least 2 weeks.

It is very simple, Glenn, simply STOP your trouble making posts for 2 weeks. Nearly EVERYONE else has except you. Don't you ever get tired to always being the source of trouble?

Once you see how easy it is to be nice for 2 weeks, you might want to do it permanently.

5649. newbie question

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-28 00:00:00 UTC
From: thinkliberty <thinkliberty@thinkliberty.com>
Message-ID: <39AB0040.FC9E7481@thinkliberty.com>
Source record: 104192

Last Saturday a friend dragged me along to a ham radio flea market, gave me a exam book and a 1/2 hour to study. Well I passed the test (tech no code) and know almost nothing about amateur radio.

I live in a condominium where antennas are prohibited unless there are ways to mount an antenna that is almost invisible so the neighbors wouldn't see it.

Here are my questions:

I am planning to get a handheld. what should I look for in a handheld radio?

What band radio should I buy?

Can I use a linear amplifier on a handheld?

Is there a handheld that I could hookup to my computer to try packet radio?

Thank you for your help,
Chris Case.

Hi Chris,

Welcome to the club! Finding gear is a never ending task for me. Just when you are happy with your 2m abilities you decide its time to upgrade and move to HF or maybe dabble in 6m....

I would recommend you jump on radioshack.com and check out some of their rigs in 2m. I have one of the old HT-202s that is still in use every day. If you could find one of those (good luck) you would be able to use it for Packet as well.

Rad Shak also has a 2m amplifier. I think you can get it online as well. I mention the web site since most of their COOL stuff is now "space-ial" order. Like the cool hf+6+2 vertical antenna I found......

Good hunting!!

But I'd guess that 99% of those were upgrades so you've got 20% less in
the novice/tech ranks.

If they were all _new_ hams then yes, I'd agree, Now what happens is
we'll be top heavy, fall down, and can't get up.

you really are something aren't you... jeeze. These are _not_ new hams
they are mostly paper upgrades. You really should learn to understand
what you read, particularly before you start spouting off.

Actually, they stunk. St. Louis was the biggest area in the US without an FCC district office and the exam sessions had people in the hallways and a general aura of the Triumph scene from Aida -- all kinds of people marching in all directions for no apparent reason.

I am not dumping on Keith at all, simply pointing out that the life of the exam-taker has never been a really happy one.

Head short arm inspector, right? As in you real life, if you did anything important you would post it like that stupid ARRL binary you put up here. Nope, John-Corky checking for STDs in the National Guard. Not a pilot, not even an officer just a weekend nurse, again..

>Upon my return from training I will deal with
> you.

That's one of the threats you made on the repeater John-Corky. Same old Toilet-Boy after all these years.

> giving him a middle-finger salute.

Lese majeste! Lese majeste! -- Hang the bastard! We simply _cannot_ have
commoners disrespecting the guardians of the noble rulers! The very
idea!

> The guy won in court, so far, and
> the cop was fined $4,000, but they may appeal it later, too.

Hmmmm -- appeal? Why should they have to appeal? It's a clear case of
Disrespect of Cop, surely a capital offense, to be summarily punished by
death. The fool commoner simply did not know his place. He should have
knelt in the dirt as the King's man passed and offered to kiss the ring!
(er -- badge -- er whatever)

While it may not be "nice" to give anyone the one-finger salute, it
doesn't seem particularly "nice" to have these public EMPLOYEES
forgetting just who they work for either. Even when arresting a
difficult suspect, it's possible to be in control and polite throughout
the effort. I know: I spent a lifetime one year working in a mental
hospital, mainly as "muscle" to restrain violent forensic (murder,
aggravated assault, rape, etc.) patients. Never, ever, had to injure one
to restrain.

And I've never been especially big, 5'8" - 195 pounds.

"The finger" is not a reason to arrest; maybe to laugh at the giver's
level of discourse, but not arrest.

Covenants notification varies from state to state. You don't state where you are buying. In Maryland they must be produced on demand for a new home and can be demanded in advance for resales. In Illinois, you sign a paper acknowledging the house is part of a PUD and the are covenants. If you want them, you have to get a title search on your own unless you make this a part of the offer.

Place of the offer with the condition that a complete copy of the covenants is to be providented within 1 calendar week and you can recend the offer with all monies to be returned base on the condition you refuse to accept any of the covenants for any reason. Although in many states, no lawers are used, the states that it is common, place this through your lawer, but in any case, if they ask why, tell them that you are not require to give any reason.

Check out Ten-Tec's transverter kits for $100, #1209 10m to 6m, and the
#1210 2m to 6m. These transverters operate all mode, with about 8 watts of
output on SSB.

So where, within the Amateur Radio Service, would you like to see the "peak" occur? Tech? Speak up, to the FCC, they're listening, and are always ready and willing to please.

I'm so sorry that you had to 'peak' with Tech. The FCC had to drop the requirements for so many of you folks to make it further. That's sorta sad.

According to the transcripts from the typewriter of Fran Stryker,
in episode one, Tonto, a old boy hood friend of he who became The
Lone Ranger, who nursed the Ranger back to health after the ambush
at Bryant's Gap, told Ranger Reid, when Reid donned the mask, that
he would call him "..Kemo Sabe...it mean 'Faithful Friend'."

Yeah, you'd think the Arkansas State Police must be really on the
ball, if they have time on their hands to arrest "serious" criminals
like this guy. Our state must be pretty squared away if we don't have
any of those minor criminals around. You wouldn't know it from the
record number of meth labs they've busted this year. :/

Just to reiterate, no one blames the new licensees of today for taking advantage of whatever
breaks they find available now. It's more difficult to accept that none of you seem to realize how fortunate you are and will be in the futureby comparison with what was demanded of us older folks. Making it to Extra used to be a fairly daunting trip, for many hams, maybe most. Not just the test content and type (no question pools with the exact answers) but all the required logistics involved in getting the opportunity to take a test at all. Today most every area has test teams frequently and easily available.

And the prevailing attitude of displayed contempt for whatever went before is most unbecoming, drawing the appropriate responses at times. And then, the 'logic' used by some to claim some sensational success in the numbers of upgrades defies common sense. Of course many currently licensed hams will upgrade when offered such an easy opportunity. It's almost shameful that the numbers are that low. It shows that many hams just don't keep abreast of current developments, and evidently more than just a few really don't care that much about what happens to the hobby.

Any claim of success in advancing the commonly perceived objective of seriously increasing the total numbers of licensed hams won't be affected at all by any number of upgrades by those already licensed at some lesser level. It takes NEW licensees to accomplish that, and clearly few have been forthcoming so far.

You might as well know that I spent 8 years as a VE team leader, and spent a *lot* of my time at late night working up the results of evening test sessions while those I accomodated slept, so that their paperwork could get in the early mail next day.

All this criticism of almost everyone who has long been in the hobby who don't happen to coddle latecomers' every whim, coupled with the vicious attacks by so many no-coders during the Grate Code Debates have caused me to question whether or not it

was worth the effort. It'd take a complete change of mind for me to ever do all that again. In other words, I didn't do it expecting thanks. I did it for the hobby- and PEOPLE *are* the hobby. But I sure didn't expect this sort of treatment. It would have unthinkable in my earlier years. Clearly we have a new set of people coming aboard who fit a mold far more commensurate with that in the upper reaches of HF.

Dont know your $$$ situation, but for a intro to 2M-,Radio Shack has a
rig for about $200 or less. (presently on sale at $179 around here) I
have several of the units and keep one in the Cherokee, the Ford
ranger, the Merc, the barn, and the hous, and the shack.
We have a great repeater system in Michigan, and the units I have are
the earlier model 212 and 242 types. They have been ticking for 4-7
years with out any problems. I also have an Icom 706, and ICom 746
but for beginning 2m working, still like to use the Radio Shack stuff.
Each to his own.
Have a great time and enjoy the hobby.

Under U S Law, when a person is detained and given a "ticket",
called different things in different states ("Summons". "Notice
to Appear", "Citation",etc), that person is legally "under
arrest" from the time that the officer decides to charge the
person until the "ticket" is handed to the offender, who
technically is then released on "own recognizance" upon a
specific or impiled promise to respond as specified on the
"ticket".

The Commission made it clear that it intends Amateurs be able to receive signals. One doesn't have to have a transceiver; a separate receiver is also an acceptable station configuration, and in fact many folks who do weak signal work do use such.

[...]

Normally I abjure pointing out the illiterate qualities of many Usenet articles, since that would merely serve to hurt the feelings of those who have already well demonstrated their level of knowledge. But when a writer presents himself as an expert and an "intellectual" as part of an attack upon others, I will make an exception.

For a person who poses as an authority, you certainly succeed in embarrassing yourself with the very ignorance you are so quick to impute to others. Also, you evidently take lessons in sentence and paragraph structure from a certain loathsome incompetent presently squatting in Clifton, New Jersey.

Here are just a few fun examples:

You place words (which are not quotations) within quotation marks (such as "sophomoric"), apparently for emphasis -- a practice which is usually limited to advertising sign painters in our most rustic counties, where the written word was introduced only a decade or two ago.

You don't know how to spell 'exaggerated.'

You don't know how to spell 'non sequitur.'

You don't know the difference between the possessive 'its' and the contraction for 'it is.'

You don't know the difference between the possessive 'your' and the contraction for 'you are.'

You make bizarre accusations (wife abuse, bedwetting, animal torture, and others) without even a shred of evidence.

You apparently don't know the difference between the adjective 'intellectual' and the noun 'intellect.'

You probably don't even see the humor in your weird malapropism "the bottom 15% percentile range."

And, obviously, you don't know how to use a spell-checker.

As for the Liberty Net on 3950 LSB Saturday evenings -- whether I agree or disagree, it always gives me something to think about; and it is often on a far higher intellectual level than is normally found on the amateur bands.

With all good wishes,

--

Kevin Alfred Strom.

You know, if you don't like what liberty net is saying, you can turn the channel.
If a bunch of old farts want to get together and be racist or complain about everything
who are you to sit there and then bitch about them on the internet? Your contempt for them
is just as bad as their contempt for each other or their contempt towards other races.
Let the old men bitch. They are probably in alot of physical and mental pain and are going
to bitch if they have a reason to or not anyhow.

Yes, you're correct. That's what I have heard in the past. I guess I'm not "He Who Knows All" :^(
FWIW, the word 'sabe' means 'know' in Spanish.

Electric Indian (might as well change it, Kemo Sabe)

Hello,

Here at the local dumpstore there is a trx on 70 cm. I'am looking for
more info on this trx. Has someone any service manual?

Here is the info on the box:
Spilsbury Communications LTD
type number FMX-1204.

Tonto wasn't speaking Spanish, but his native tongue. He was a
Potawatomi.

And rechecking the transcripts, typo...Tonto debuted on Radio in
episode 10. Named Ranger Reid Kemo Sabe in episode 11 or 12, if I
make out the faded numbers on the pages I have correctly.

Whatever you do, do NOT buy a home where the use of YOUR property is restricted by a quasi-dictatorship known as a "Homeowner's Association."

Went to visit some friends in Florida last winter and got a first-hand view of what these organizations are all about. They threatened legal action against my friends because, in their opinion, the lawn was not being edged properly. To make matters worse, they use the property's own money (in the form of homeowners association "dues") to fund said legal action against the property owner.

Upon my asking to see the rules, my friend gave me the complete list of restrictive covenants and homeowners' agreement...a stack of papers over an inch thick! All this to tell a property owner what he or she may not do on and with their private property...paid for and enforced with the property owner's own money!

Don't support this kind of nonsense. No matter how "nice" and desirable the subdivision looks, do NOT buy there and support a homeowner's association. You'll be sorry.

COMPLETELY WRONG!!!!

In 1995 (or perhaps early 1996) Ken Storm (the moderator of ScanRadio Fidonet Echo (they don't have "forums") suddenly became missing. As Assistant Moderator, Bill Cheek became Moderator by default. He was NEVER elected to the position of Moderator. The first thing Bill did as moderator
was to kick out several who he saw as a threat or who knew more than him. I was one of those who were kicked out and NEVER told why or given a chance to defend myself.

You have no degree John-Corky. You wave your silly volunteer OO certificate, even posted a binary of it or your sillt VE certificate. If you even had anything close to a degree you would have posted it. You haven't. All John_corky can say he has done in his miserable useless life is volunteer to be an OO and a VE and posted more than 400+ offtopic messages a month. Proud John-Corky, he has done nothing he can display or talk about. He is nothing.

> > Igiven all this, it has been determined by many people

Not near as enormous as the event if you did John-Corky. You post 10 to 1 compared to anybody in any group John-Corky. That's why you little retard are the #1 offtopic poster.

When are you going to be sincere and shut up Corky?

Glenn

Well, one time I was driving south to FW at about 4 AM (I worked nights at the time, so I was awake anyway), this was the time the drug t.f. stopped me. I was asked (in this order) for my driver's license and proof of insurance, why was I out at that late an hour, what was I doing with all the radios in my car and who was I talking to on them, could I prove I was a amateur radio operator and a EMA member, had I ever been convicted on any drug charges, and would I allow them to search my car. They ran my plates and license (the agent who waited by me was annoyed that my radios picked up everything said, and told the other narc to use his phone. I was released with a warning to watch my driving (the first time anything was said about driving).

Another time I was talking on an Okla. City repeater when I passed by what appeared to be an interdiction stop. A marked OHP unit peeled off and caught up with me, then ran my plates before pulling me over. He wanted to know who I was talking to on the radio, if I'd been warning anybody. I explained I was a ham, showed him my license, and casually mentioned I'd been a police dispatcher, and did Lt. So-n-so still work in Dist. 1 (Okla. City, Troop A). After that he became friendlier and apologized for pulling me over. He was the one that explained the radio-equipped escort car profile (later confirmed on TV news reports).

Of course, I don't have A antenna on my car, I have THREE antennas. Dual-band for my ham rig, dual-band for my scanner, and a mono-band for my EMA radio.

In Oklahoma it costs $14 for Ham plates, and they give you a second plate
for the front of your vehicle (Okla. doesn't require a front license plate).
This is so you can be identified as a possible communications asset when
approaching an emergency scene (or so I'm told).

That's very possible, Curt. I remember reading about the possible use of VLF communications within the military years ago, and speculation at that time about using it aboard submarines for two-way communications (trailing the long waire antenna behind the sub seemed to be the method all agreed on). Now, I have no idea if they implemented any of that. So, you could be right (it is only one way communications).

By the one you prefer, Ryan. They are both good radios, and they will both serve you well. Asking people in this newsgroup which they prefer is like asking people which car they prefer - Ford or Chevy. In the end, they will all give a preference, but could not really come up with a solid reason behind that preference (oh, they'll tell you all kinds of nonsense, but no real solid reason). In other words, both brands are fine, but you'll never convince these people that the other brand is as good as their preference.

It is the same with radio. Both companies have been around for years, both build good products, and both support their products about the same. So, in the end, it is minor features (both have the same major features), and plain simple preference.

Anyway, I use Yaesu products. Why? Because I like the looks of the FT-847. And since I had Yaesu in the house, I went with Yaesu for the handhelds. In other word, there is no real reason for this preference (it just seemed like the thing to do at the time).

I am not understanding this... as far as I can tell, the only agency in the united states charged with enforcing and making any laws that regard the public airwaves is the FCC... that's why many bans on radar detectors have been thrown out, and why many laws cities levy against erection and construction for towers for ham, cb, etc. has been rejected as illegal.... we should all ban together against this sort of thing, and let the FCC know how we feel; the lack of such lobbying and support is what made monitoring cell phone frequencies illegal.

and before those of you that are about to pounce on me with the remark "well, why do you want to listen to other people's private conversations????" I respond this; I do NOT care to, specifically; rather, it's the principal of the thing... it's in the name of fighting that "slippery slope", where you start allowing some infraction to incur to a limited degree, then nothing is to prevent it's reoccurence a little later, then a little later, until nothing is left... so we have

to start fighting the war on the FIRST front we're confronted with.

anyway, i'm emailing the FCC and asking "what gives" and i think all should do the same. INCIDENTALLY, I am a ham, but I do not think that these exemptions should be given just to hams. We're all american citizens and should be given EQUAL protection under the constitution.

now what is MY .02 worth.

Eeeeyeah. Special license plates in New York State are $150 extra each
year. Amateurs too. Not really an option for most.

I still have a problem being stopped by the police just because I have the
wrong length antenna on my car. The Supreme Court gave these guys powers to
search vehicles on the slimmest of pretexts.

For awhile around me the cops were monitoring CB channel 19 and whacking
folks that warned oncoming traffic of the speed traps. They found a hooker
ring operating around one of the truck stops running on 19 too.

My husband and I both want to partake in HF contests from our home here. We are mainly using long wire antennas. Is there any way that we can run the 2 radios at the same time? Do we have to be on different bands always or is there any way we can be on the same band without causing interference or damage to the other radio? Does anyone else have this dilema? How did you resolve it? How do contesting stations do it? Any help would be greatly appreciated!! Please email me directly at: N9YLN@aol.com

Something I'd like to see repeated happened back in 1966. I was the
chief engineer of a commercial radio station and had been at the FCC in
Buffalo, NY several times over the previous two years obtaining my
amateur extra, commercial telegraph 2nd (too young for 1st), and 1st
phone ticket as well as endorsements. I had to take my pre-induction
physical and stopped by the FCC. The engineer in charge of the 20th
radio district (and I wish I could remember his name) asked me how it
was going. I mentioned to him that my father had been ticketed for 1
mile per hour over the speed limit - and the guy started laughing!
Literally, the tears were streaming down his face! He apologized and
explained - one of his men had been stopped the week before in a
similar town (where most of the income was from traffic tickets). Back
then, two police cars were involved - one with the radar set up on a
wooden tripod and the other was the chase car. The cop explained he
had been traveling 1 or 2 miles over the limit by the radar set back at

the first car. The gentleman who had been stopped requested to go back and speak with the other officer (hmm ...). They went back and an introduction was started - only to be cut short by the gentleman who had been stopped. "I don't want to talk with the other officer, I want to see the inspection sticker on your radar set."

The cops looked at each other then back at the gentleman. Out came the credentials. "Federal Communications Commission. Either you produce the inspection sticker validated by a 1st or 2nd class radiotelephone or telegraph licensee with the proper radar endorsement or I'll have to write you up."

The cops tore the ticket up, packed up the radar, and went home.

This is true. It happened a couple of months before I entered the U.S. Navy in January of 1967. I laughed too! I hope they try and arrest someone from the FCC for having a scanner!

You're forgetting something here. You MIGHT be able to modify it
legally as a licensed amateur under one condition - no one can call
in! Remember, even with the autopatch in a repeater, it may only be
controlled by a licensed amateur, therefore it is for outgoing calls
only! If you only modify the handset, you couldn't talk to an
unlicensed radio; therefore, this is going to be an outgoing unit only
since it will be a licensed amateur radio station.

You found a "chicken coop" that was open?
Around here they build new ones and never open them.
(at least every time I go by them they are closed)

Chris has this nailed exactly.

The Indiana law clearly exempts any ham as
long as the ham isn't TRANSMITTING on a
police frequency. That exemption would
allow the ham to have a scanner.

Funny too that newspaper reporters are also
exempted. Guess the cops have no problem
with reporters listening in, but don't want the
"regular public" listening.

Cheers,
Bill K2UNK
one of the team that got the old NJ law
changed a few years back.

kk7ho@aol.communicate (KK7HO) wrote:

> They're gonna put the IRS in charge of gun registration if this
> passes.

> Senate Bill SB-2099 will require us to put on our 2000 1040 federal
> tax Form all guns that you have or own.

Cite the section that states this requirement. Form 1040 is not
mentioned anywhere in the proposed bill.

> It may require fingerprints and a tax of $50 per gun and a 2"x2"
> photo.

Cite the section that states a requirement for a photo of ANY size.

Cite the section that requires fingerprints. In fact, the bill merely
requires the Secretary of the Treasury to provide ample fingerprint
forms IF REQUIRED.

Cite the section that imposes a tax on a personal gun. In fact, the
reference to $50 is for manufacture of handguns.

> This bill was introduced on Feb. 24.

Practically the only thing you got right in your whole post.

> This bill will become public knowledge 30 days after it is voted into
> law.

Not true. Cite your reference. There is a section that requires the
Secretary to implement a public awareness program within 60 days of
passage of the law. That is not the same thing.

> This is an amendment to the Internal Revenue Act of 1986.

You also got this correct.

> This means that the Finance Committee can pass this without the
> Senate voting on it at all.

Nonsense. All legislation, even that originating in a house specified by
the constitution must pass both houses AND be signed by the President.
There is no shortcut for public laws such as the Internal Revenue Act.

> The full text of the proposed amendment is on the U.S. Senate
> homepage.

Your post might have been more useful if you had actually read the text of the proposed amendment.

> You can find the bill by doing a search by the bill number. (SB-2099)

There is no legislative numbering system that starts with "SB." Bills originating in the house start with "HR" and bills originating in the senate start with "S."

A review of the legislative process would serve you well. Restraint in broadcasting incorrect conclusions on matters in which you are clearly under-educated would serve the rest of us well.

And do you carry this ideology to all other aspects of your life? Do you have a horse and plow to cultivate the land, and grow your own crops "no hanky pany, just sweat, nobody gave you a thing"? or do you go to the grocery store, the way 99% of modern population does, and buy your food right off the shelf and take it hope and push it into a microwave?

Your response to this, of course, is "what does that have to do with ham radio?", and I think that answer speaks for itself.

Under U.S. laws, a Misdemeanor is a crime. The other class of crime is
Felony. One can be arrested for either. There is a lesser category of
offense called a Violation that can get you a simple appearance ticket in
most jurisdictions.

Subject: [InHam] Josh Church, N9VKS, case dismissed
Message-ID: <df.6151195.26849bb2@aol.com>

I received the following letter from Pete, N9SFX today and passing it on
for
your information. This was brought about in part, largely due to the
efforts
of the ARRL.
Maybe they aren't such bad guys after all

Dear Sirs:
I would like to thank you for contacting the Elkhart City court on
behalf of Josh Church. Today he received a letter from the court telling
him
that his case has been dismissed. I've heard that before. Now he has to
get
his radios back. I'm sure that the dismissal was in no small part
precipitated by your intervention. It is in no way a victory for Josh or
the
amateur radio community because he was not compensated for all the time
he
spent at the hands of his accusers and the court system. Neither was he
compensated for the loss of use of his equipment nor the damage incured

to
the same by the abusive treatment of the Indiana State Police. The
biggest
loss incured is the loss of faith that we all had in the justice system
and
the people who's job it is to " Protect and Serve " the public.

Pete Ostapchuk

Ignorance in America

Posted by "On the level" on August 27, 19100 at 19:19:22:

I have listened with an impartial ear to what is said on 3950. First of all I am continually surprised at how "sophomoric" the arguments are especially coming from aged men. In fact "sophomoric" really applies to how they mount their arguments complete as they are with the over blown and exagerated presentation of fact and non-fact alike, rife with non-sequitors, bigotry and the extreme and biased use of information out of context (of which I doubt they are even aware). The content indicates extreme ignorance. While a rational case might be made (for instance) against closer trade with China - the unsophisticated and incipient "brownshirt" ignoramus w1wcr, rather than mount a cogent argument to make his case, repeatedly salts his ignorant rants with racial epithets interspersed with hackneyisms like "the Clintonistas", "sheeple" etc, believing this to be the height of intellectual sophistication. (Its so bad its funny) What his arguments point up above all is how markedly limited his 'intellect' actually is-but he doesn't realize this because he lacks what all boors and morons lack and that is "perspective" and wisdom. These are the guys you used to see at parties who "knew it all" and loudly wanted to make sure everyone knew it-they get very demonstrative and peevish when they ignored and are not at the center of attention-usually they are "borderline personality disordered" "authoritarians who often have a history of wife or child abuse, bullying the weak, bedwetters and small animal abusers in childhood. It usually results from growing up in families run by authoritarian un-educated fathers and neurotic mothers. They have a marked inability to feel empathy or compassion and are imbued with an extreme and mistaken sense of self importance and intellectual compass.
These are bigoted philistines whose actual and measured intellectual would find them placed in the bottom 15% percentile range-they don't know this-they actually fancy themselves "Henry Kissingers"-which is outrageously funny based on their presentation. The result is what you hear on 3950-sophomoric arguments presented in extremely bad taste-they are the "American Ignorant"- and they don't realize it. I have to laugh at w1wcr at how he repeatedly cites "Scientific American"-it is the mark of the sophomoric that after reading one text believes he already knows it all. No perspective-the "original idiot". In their own parlance "white trash", life's failures whose cultural tastes to not ascend past WWF wrestling. Their really is no "ignorant" like a white culturally stunted "American Ignorant". If you want an education on fringe right wing ignorance in America I recommend you read the book "A Voice Upon The Plain" whose author escapes me now. Your cretins and you don't know it which is

the mark of the cretin.

Sure John. No problem, as long as you are going to stop adding crossposting your messages into the alt.firefighters newsgroup, and other places and you will stop troublemaking.

You be nice, and I will also. Never any doubt about that. Just stop replying to anything but scanner related stuff, like below.

So tell me, what kind of scanner are you using now? What made you decide to use it, instead of another model?

For whatever it's worth, and I can't imagine what that could be, my Radiotelephone First Class license, with Ship Radar endorsement, was issued October 10, 1962.

The abomination the FCC replaced it with in 1984, when the First Phone was discontinued, was a Lifetime General Radiotelephone Certificate

I didn't come up with the Amateur Extra till 1969. Didn't need it till 68, and after all, I had to take a couple days off work and drive the 260 one-way miles to the FCC distict office in Kansas City- and get there NLT 9am so as to not get locked out..

Hi,

I was one of only 45 respondents when the FCC considered FCC PR DOCKET 91-36 AUGUST 20 1993. It is my belief that the FCC has rendered decisions on this topic more than once; therefore, each of you may want to do additional research to locate all FCC generated documents related to this topic.

I am amazed that the action the FCC took was not promptly shared with other hams and those who enjoy listenning via scanner. When this issue first came to my attention, I was profoundly disappointed that there was such a low level of response from hams and scanner enthuiasts.

I got involved when I learned that off-duty POLICE OFFICERS in Los Angeles were guilty of a CRIME if they listened to ANY police or fire transmissions, while in a motor vehicle, UNLESS they were required to do so by their department. The specific law is Section 42.44 L.A.M.C. (Los Angeles Municipal Code). This is the same law that makes it illegal for anyone else to listen to police OR fire calls while in a motor vehicle. And, I mean ANY police or fire department, even if it is skip!

Normally, this obscure law is used to arrest tow truck drivers that respond to traffic collision calls. However, I have personally witnessed its application outside of this senario. I also know the above story regarding the LA officer is true because I conducted the CRIMINAL investigation, against that officer, in May 1991.

During my investigation, I kept thinking, "this is assinine" because the only thing the officer had done was listen to police calls while seated in a friend's car. Neither of them were accused or suspected of responding to ANY police scenes or doing anything else illegal!

To digress, I believe that we as hams need to abide by the laws. However, we must also fight poorly written legislation, of which this is a classic example.

The above docket is there for YOUR protection. I suggest that each of you obtain a copy and carry it with you at all times. And, if you live in a state such as Michigan, get a copy of their Vehicle Code 750.508 (a) and keep it with your ham license. That way, if you are ever stopped, you can show that you are exempt from these laws.

Just my two cents worth,

Kevin Williams NI8H

I think he means a personal communications service, like citizens band. Of course, with the recent action to eliminate all challenges to becoming licensed by Kenwood and others, it looks like its headed in that direction.

Actually, today's cellular telephone was based on an older technology
called IMTS, which was based on MTS, which was based on earlier police
communications and broadcasting. That can be traced back to the
experimental work by Marconi, Hertz and others.

It doesn't matter. The point is, whether you read it somewhere else or not, you cited only the senate bill, nothing else. Those of us you were trying to reach with your message had only the senate bill as a reference; your reference. What you said and what is in the bill are not related. Whatever might be in the other links you provide means nothing, because the bill is what would become law, not other people's opinion.

And if you knew the process by which our laws are given, you would know that the bill cannot become law on the vote of the Finance Committee, regardless of where you read otherwise. And even if it could, can you explain to me how that would happen when the Republicans control both legislative bodies?

Even when they lose both houses in November, the bill will die at the end of this Congress.

> i will try to find it again just to impress in your liberal mind -
> that somethings are true about your hero Klintoon.

You say "liberal mind" the same way n0vfp calls AF2Y a "jew," as if it were an insult. I wear my liberal ideals as a badge of honor. Although, just to show you I am my own man, I don't understand how the Republicans can be so right about gun control and so wrong about everything else.

At least I know how to spell our President's name.

I am only quoting the numbers he gave, which were the following (cut and
pasted)

> For example: there are now just over 15-thousand more Extra class hams
than
> a year ago. That's an increase of a solid 20 percent. And the
general
> class is up by nearly 18-thousand. ..."

Look REAL carefully at that paragraph. See the "15" that precedes
"thousand"? see the "18" that precedes "thousand"? when you take
numerals and affix them to quantities, they are ADDITIVE... which means
"15" and "thousand" means.... "15 thousand"!!! that's all I was doing.
Enough of that, I can't possibly explain that one any further.

Which in
turn
> means that "restructuring" is another gummint thud.

That is just your oppinion; there is no way to asses whether or not
restructuring is a "thud" as you call it, after a few month's time. For
one thing, to judge it's success, you'd have to first lay out what the
goals were of the FCC in doing so; who's to say the sole purpose was to
increase the number of general and above class licenced operators until
we had MILLIONS of them? or however large the number would have had to
have been to fall your your realm of "success". I have the strage
feeling that no matter what the result, you would have judged it a thud,
had the numbers for ALL classes and the numbers of overall hams SOARED,
you'd have said "look! it was a failure! we have nothing but CB'rs
crowding the bands and the hobby is doomed! So therefore, there really
is no discussion there, you would have levied the same judgement on it
one way or the other, it was a no-win scenario.

Quite frankly, it's obvious that you and the rest of the P.C.T crowd are
still crying that they got rid of the high speed code tests.

> Maybe you can explain why a Tech Plus
who
> upgrades to Extra is a bigger asset to ham radio or "the National

Interest"

Allows more of them on more of the amateur radio bands, making it more difficult for the corporate lords to steal them from us as they did the first two megacycles of the 220 band.

> than is any no-code Tech who doesn't give a bleep one way or the other about
> getting on 20m ssb. I'm all ears, go for it.

maybe he wants to get on 40m ssb... or maybe he wants to use RTTY on 30m.... who knows. He wanted to upgrade for some reason.

>

> Really? Geez. Thanks for the hint on "how it can be done".

you are welcome. I was being a little sarcastic because, after all, it looked as though you were really trying to state that was what was going to happen, that there were going to hold down the microphone key for two different transceivers and talk on two bands at once, I couldn't believe you even said that.

Us CW DX

>
> >
> What exactly what pray tell is your definition of "modernizing" ham
radio?

Boy, if I hadn't answered that question countless times for the P.C.T.
crowd... anyway, here we go again... modernizing it involves decreasing
the emphasis on testing fields of knowledge that are LESS applicable
today than others.

I liked a post another fellow used on a thread, wished I could have
quote him verbatim but I can't... anyway, it mostly involves this; how
many P.C.T'rs would be like to see ham tests over proficiency of writing
assembly language programs for pentium III processors for use in digital
communications? that is modern radio. CW is just a nostalgic lay-over
kept alive for personal enjoyment (which is fine, most of my QSL cards
are CW!!!!!), and for trying to make the "new generation" go through
"what us old buzzards had to".. and I see no point in that helping the
cause of amateur radio, just spite and jealously.

I
> keep reading all the codeless numbnuts bullshit about how if we only

> >
> What grays to you see that I don't see?

Do I really have to explain that? Are you really standing on the train
tracks and hearing the diesel horn's warning blasting away, and saying
"what train?"

here we go; I see the greys that the life of amateur radio doesn't
revolve around ramming morse code down the throats of those who want to
learn what it means to communicate via radio waves.

> Touchy, touchy! Diversionary tactics = NULL.

diversionary tactics? as though looking at what's blatantly in front of you on the screen, reading off this newsgroup, and saying, "what is this i'm reading? explain it to me" isn't diversionary. You're trying to halt the progress of the discussion by going back over and over the same piece of ground, as it were, but I will not allow it. You can just keep denying what you're reading if you like.

What is your callsign and
what
> license do you hold anyway (if any) and when did you acquire it??

I am a general class operator, I do not give my callsign for reasons I have already explained in this and other threads.... and I have been held this particular licence for a month now, I think it has been. (heh, I can't wait for the "ah-HA!" to come from you on this, but so be it)

You
might
> notice that the bulk of us "PCTAs" don't have any problem at all with

we
> been there, we done it and have nothing to "hide" behind our rhetoric.
> Where's yer experience and credibility?
> >

>

my experience in life and credibility is not founded solely on ham
radio. Furthermore, I have seen about an equal number of PCT's and
non-PCT's keeping thier addresses private by not relinquishing thier
callsign.

> > > >

the significance of upgrading has always been the same, why would that change? each person has thier own reasons personally, as well, and those are up to the individual.

something other than white-washing the conversation with words like "circular non-logic" and coupled with vulgar and profanity like bulls**t, which seriously takes away from your attempt to sound learned and knowledgeable by the use of the former words.

I just resoldered several of my jumper cables with new PL-259's, on not
just 8-X but 9913 and 213 as well.... I also had to use an n-connector
for my 440 rig. Hm, funny, these concepts are the same regardless of a
person's profeciency in morse code. as long as we're throwing around
numbers right now, i'll use one more...

I assumed that by launching personal attacks, like "laziness" (implying
that all people who took thier test after the code tests eased up are
lazy) you were having a case of the sour grapes over the fact that the
sacred, god-given, "thou shalt NOT recend" morse code testing had been
finally reduced.

I AGREE. A RELAY THAT IS VERY NOISY IN THIS RIG. This is supposed to be a QRP rig that can run on batteries. Solid state switching would take a lot less current that that stupid relay on CW!!

Also, have heard from a friend that HAS anSGC-2020, that it drifts a lot when turned on, and sometimes locks onto weird frequencies, and has to be reset or turned off and then on again......

>
No, not so. I personally spoke with the FCC guy. I'll see what I can
do about finding his name. I hope I kept that letter from the FCC
stating I had left my sweater there - there was no identification, they
remembered me. I went to pick the sweater up whilst on my way to the
pre-induction physical in Buffalo. I was chief engineer of WWHG in
Hornell, NY at the time. I was attending college at Alfred and my dad
had been clocked at 1 MPH over the limit. That town was something
else - I heard (unconfirmed rumor) that the limit had been 25 and they
nailed a trucker for 1 or 2 MPH over - he won on appeal - seems they
did not post the speed limit often enough (required if the limit was
below 30 - they just changed it to 30). Please remember this was over
30 years ago.
- Jim

Well, they DID say local governments are are preempted from regulating what we receive:

"... are inconsistent with the federal objectives of facilitating and promoting the amateur radio service, and more fundamentally with the federal interest in amateur operator's being able to transmit and receive on authorized frequencies. We therefore hold that such state and local laws are preempted by federal law. "

There is no essential difference between operating a transceiver and operating a receiver and transmitter, as far as the FCC is concerned. Both comprise a station.

Cortland

5773. Auto Antenna Problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-29 00:00:00 UTC
From: Art Leganchuk <art.leganchuk@REMOVE.ec.gc.ca>
Message-ID: <39AC10A4.4B6418EF@REMOVE.ec.gc.ca>
Source record: 104151

1994 Pontiac has an antenna with noticably worse gain (AM band) than the

Dodge sitting next to it. Gain on the Pontiac increases discernably
when
someone touches the whip, while holding the Dodge's
whip makes no noticable difference.

Lead-in continuity and ground points have been checked, etc.

Pontiac has Antenna at the rear, so probably about 15 feet of leadin,
while
Dodge is maybe only 3.

Anybody have an idea how to correct the gain in the Pontiac Antenna??

5774. UK no-coders: radio hackers?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-29 00:00:00 UTC
From: jb2101@my-deja.com
Message-ID: <8zqqhf$wZB6$l@nnrp1.deja.com>
Source record: 104152

As you read this message, know that somewhere in the British skies a bogus controller (a "radio hacker") is giving phony instructions to an airline pilot. This has been happening for quite some time now, and has so far caused no accidents. But isn't a radio hacker likely to have purchased VHF equipment capable of getting on airline frequencies for other reasons?

My guess would be that the radio hacker purchased it for amateur radio and is probably the UK equivalent of a no-coder. Bet that, if you had to pass a 13 wpm exam in England to get your license, there'd be a lot less of this stuff. See the AP story at

http://www.iht.com/IHT/TODAY/TUE/UP/travel.2.html

for full details.

It proves that no-coders / low-coders are much more dangerous than we ever suspected.

John... as a coded ham for close to 40 years I'd say politely you are so full of shit it's coming out your ears. Exactly how many new generals and extra "lites" have been cited by Riley since April over here? Don't know... I believe the number is zero... a number I know you appreciate the meaning of.

Gerd, W2ISB

P.S. What radio do you know of that is sold to amateur's transmits AM in the aircraft band?

Hey there, I know some good folks who live in Clifton, Belleville, Lodi,
Paramus
and Short Hills N.J. (Jacob in Short Hills knows how to throw a party!
Been to his spread to play golf and many times)

Perhaps Kevin you should consider re-starting the illegal SW radio
station "The Voice of Tomorrow" to reach a greater audience.
Remember? The radio station *you operated* for a bit during the 80's
which was so soundly denounced by the SWL and Pirate Radio
Community, that it earned the moniker of "Clandestine Station".

Kevin, do us all a favor. Move to Iceland or Greenland, assuming that they
will even let you in, so you my research further the "World Ice Theory" so
loved by Dietrich Eckart, Hans Horbiger and Dr Ernst Schafer.
(SS-Haupsturmfurher)
I think you will be happy there living in a 2-room grass hut looking for
runes carved into the stone. If that is not possible, I believe that Colony
Dignidad
in Chile is still in operation somewhere. Perhaps you can find Barbie's
or Mengle's old moldy writings in some file cabinet down there someplace.
They sheltered them for 20 years and I'm sure they still have their
"papers" on file.

Cheers from Irving and
all the friendly folks
at the ADL

5781. New version of the ICOM IC-T81A?

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-29 00:00:00 UTC
From: dlr@daver.uucp
Message-ID: <G02oMM.1Ls@daver.uucp>
Source record: 104159

I have what appears to be a newer version of the ICOM IC-T81A. The
mod to extend the RX range (SQL/Multifunction/power) does not appear
to work on this unit.

Would someone with the programming software, and an older T81A be willing to
reset their processor, dump the radio, enable the extended RX, and dump the
radio again? If you could mail me the two .ICF files, I'll analyze them and
see if there is anything in there that can re-enable the extended RX range.

Thanks in advance,

I've been studying legalese and court interpretations of law for a few years
now.

Where has the FCC clearly stated, in writing, that they consider a
transceiver to be identical to a receiver/transmitter combination in all
regulatory and legal respects?

I'm looking for any parts or accessories for the Icom IC-901 radio. I believe the modules also fit the Icom IC-900 series. I'm looking for the following modules:

UX-19A/E 10 Meter Module
UX-59A 6 Meter Module
UX-129A/E 1.2Gig Module
UX-S92A/E 2 Meter SSB Module
UX-R91A/E Wideband Recieve Module

If you have a 901A or 900 that has bit the dust and you have ANY parts/pieces for sale, please contact me, I may be interested in buying them from you.

Thanks

I wasn't dumping either -- just pointing out that there is often much
more to getting a license (or upgrade) than simply spending a couple of
hours at an exam session.

I was lucky -- the FCC FO was only half an hour from me when I needed to
take the General theory element.

5789. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-29 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <39AC6789.A421416B@usa.alcatel.com>
Source record: 104167
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy

This one requires we recall that the Amateur's defense was that an Amateur is unable to buy a (current) transceiver whose receiver is restricted to only the amateur frequencies, and that this should not be held against him. The FCC agreed.

The same applies to receivers. In fact, it applies more so to receivers; no one makes here or imports into this country receivers which cover only the Amateur bands.

The FCC decision SAYS such local laws "are inconsistent with the federal objectives of facilitating and promoting the amateur radio service, and more fundamentally with the federal interest in amateur operator's being able to transmit *and receive* on authorized frequencies." (emphasis added)

The Commission did not need to say receivers and transceivers are equal. They said that the state and local laws which prevent us from receiving authorized frequencies (by banning an apparatus which covers others as well) are preempted.

You probably will have noticed the the FCC doesn't like to make broad pronouncements. I suspect someone will have to appeal to them that this decision applies to receivers as well before they will come out and say so explicitly. But that's the same approach they took to television antennas; having preempted laws against small satellite dishes, it took a few years before they preempted laws and covenants against conventional TV broadcast antennas -- which they did by extending the original preemption.

Cheers,

Cortland
(ka5s@saber.net)

Only in your dreams, Toilet Boy. this is your denial manifesting
itself again. Take your meds.

> > I'll post my data and then leave the scanner groups forever.
> > Here are the terms again, just in case
>
> Richard, I don't care what you do.

Sure you do. You want to cause trouble and keep things stirred
up and generally annoy people. You're also avoiding the issue
about your so-called degrees. You're a liar when you claim to
posses them. Prove the degrees or, to quote you, "or be found
a liar by default."

Because your mental illness and expired medications are causing
memory lapses, here are the terms again, just in case you develop
the intestinal fortitude to face yourself. So, show us, Toilet Boy,
are you man enough to face yourself? Or are you just a pitiful
liar and coward?

Here's the deal: When you post the proof of your alleged degrees
AND it's verified, I will post the information about my psychology
degrees.

I'll even sweeten the deal. *After* your information is verified,
I'll post my data and then leave the scanner groups forever.

John Mackey,

Please stop the constant baiting of other users. You've posted so many aggressively abusive messages over the past several weeks that your lack of sincerity in requesting some abatement is clearly obvious. It isn't hard to see that your new "persona" is designed to do nothing more than annoy and provoke those to whom you address these insincerities. Your agenda remains (as it always has been) to incite unhappiness and strife. I certainly hope that your ISP will undertake the long overdue disciplinary action that will result in your stopping this incessant harassment.

I read some about John-Corky going to East High School in Iowa, and getting beat up on a daily basis. I read some about John-Corky living on the Indian reservations running buck naked. I read some about John-Corky haveing problems with wet beds. I read some about John-Corky haveing sex with underage girls and underage prostitues. I read some about John-Corky selling Ham licenses. I read some about John-Corky have sex with other PARG members. I read some about John-Corky haveing sex with a guy named Petey the Portland a flute player or something. I read some about John being charge for molesting children. I read about John-Corky being charged for molesting the elderly.

I guess if the one deja.com you found about Glenn was true ALL of the above about you John-Corky must be also be true. You are a liar. Fraud. Creep.

What happens to me<no radio ticket>is I always hit these
vehicle inspection sticker check points in these rinky dink
little towns on the way to Atlantic City a few times a
month.I have seen some postings recently where it says non- hams may have
this equipment<my state only YOUR rinky-dink lil states rules may apply>and
not fear prosecution.You really dont know what to beleive till
the PROCESS happens to you.So I come up on 2 this month.The first time I
just in a 2 second non-furtive
movement,I had the whole apparatus disconnected
and stashed out of view in carry bin behind the 2 passenger seats.The second
time I disconnected
the stock bc-245xlt antenna <makes radio very scanner looking> and slipped
on dual band custom antenna
which makes the 245 look like some kind of
wacky nextel phone of the future and just left it there.
What would you do?If you're not a ham?
spread the love and care around the household,Gibstah

Close, but no kewpie. A person is under arrest from the moment in which
his activities are interrupted ("arrested") by a law enforcement officer
acting under the cloak of authority. Until such time as this takes
place, the subject is not under any form of arrest, thus he is not
evading arrest (under law), should he not come close enough for the LEO
to make contact.

Yep!

I think the first speed radar system was developed in the late 1950s.
I've seen something about this old, it's big and it's a pain to use.

John, it is clearly obvious that YOU do not want this to
stop, as you keep posting peoples names in the subject line and
calling them troublemakers.

Please John, stop the name calling, and try to post on-topic.

> I use a Regency MX-3000.

Now, you see? That was not too hard. Unfortunately I guess I
asked you some technical questions that were beyond your capability
to answer. Lets try it again.

What made you decide to use the MX-3000 instead of another model?
Even if you cannot come up with a technical reason, tell us if it
was just a reason such as the color of the scanner matched your
clothes that day.

I agree 100%, however, and unfortunatly, the "3950 disease"
appears to be both spreading and getting more potentially
malignant.

An organized militia group which does a radio program over wwcr or
wgtg (?) has started a tactical communications network
on the 20 meter SSB ham radio band. I think the FCC
and FBI may want to monitor this frequency and it's
participating callsigns closely in future.

Note: The original text is at www.pbn.4mg.com and is reproduced below.

Just what we need eh? More rabble on ham radio....oy

There's an interesting theory of knowledge. If a statement is
critical of the sly criminal who is often referred to as the current
"President of the United States," it is by definition "speculation,
allegation, and unconfirmed rumor."

Even the last Caesars didn't have it quite so good as that.

Wonderful world,

I do not recall asking for your apology. That would be silly.

>
> 2) My point was simply that the stats supplied prove more the opposite
than
> the point the writer appeared to be making. Do you care to comment on
the
> points, either one, or are you in babble-mode.

I already DID comment on both sides of the issue. You're use of the statement "or are you in babble-mode" is merely an attempt to discredit me by using some cute-sounding insult, but it failed miserably. I won't even dignify such with further responses.

>
> 3) While I have no particular love for NCI, I have stated on the

> many times that I expect and in fact support a no-code Extra. Your
idiotic
> terrorist statements are at the very least a bit mis-directed.

My terrorist statements, Richard, were in response to the message that was posted regarding "why don't these people post thier call sign and more identification to give thier postings a little more validity" or words to that effect; I was merely explaining why all of us don't give out such personal information for the hungry horde to devour us with.

As far as "terrorist statements", I do not know if you read what I said carefully, but it was in regard to TERRORISTIC responses that have come in the mail and email. I have had everything given to me from threats on my life to questions of whether or not my mother and my father were married (censoring there).

>
> Should you wish to carry on a sane debate, feel free.

I have been.

>Should you wish
to
> engage in a bombast exhibition, feel free as well. Just try not to
confuse
> the two.

You have reverted back to the same tactic of obscuring the facts and discussion at hand by using such absurd implications. I shall digress this one time and show an example of what you are doing, so that others reading likewise see as well what you're attempting to accomplish in lue of discussing the matter at hand... This statement in NO way reflects how I feel, I am merely using a tactic called "demonstrating absurdity by being absurd"...

"Richard, should you decide to have a wholesome discussion with me, feel free. Should you instead decide to strip naked and run through a crowded burning theater shouting obscenties, please feel free as well. Just try not to confuse the two."

as you can see, you certainly weren't doing this, yet in my response, I tried to make an objective reader who was going over this post believe so. It's a sad tactic, really. One I had rather see left to political mud-slining and the sort, and left out of these discussions.

> What type of scanner do YOU use, Blake?

A number of them. I have a Pro2004 here on my desk, as well as a
Motorola JT1000 scanning the local FD channels. At the office
I have a BC895, Regency with TF1, and a Spectra, VHF. I also
scan my UHF Community Repeaters with a Motorola Maxtrac.

I have outfitted most of my service vehicles with my personal
favorite radio with scan capabilities, the Motorola Spectra for
VHF, <most used> Maxtracs for UHF, GTX for 800, and Uniden
MR8100's for filling in the holes.

My son has a VHF Spectra in his pickup, and a Motorola HT1250
for a portable.

My wife scans with a Motorola M1225, or SP50 portable.

Now, of course, most of these are Two Way radios, but with their
superiour specs, they make GREAT scanners.

Of course, if I had to stretch, my 1200S, and my 2000 series
service monitors can scan.

That is very true, Blake. Infact, several years ago during my affiliation
with a local
Sheriff's Dept (which operated on hi-band), I commonly used my issued MT-500
to scan the law enforcement & fire freqs as I was VERY close to a commercial
paging transmitter. The MT-500 was one of the FEW receivers that could
survive, & the scanning board in the MT-500 was a fortunate option.

If it is an older CD player with a weak laser. One trick to try is to
wash the CD in lukewarm water with a mild detergent and dry
carefully. Be very careful not to scratch it use clean soft cloths
to wask and dry. Blow any lint off. Sometimes there is a bit of
process chemical left over when CDs are pressed and this can
keep an older tired player from reading them.

: hand a paper towel too, so you, like the rest of the P.C.T crowd, can
: wipe your tears away. The anger and brutality of that remark speaks it
: all.

What anger? I have many Amateur friends. Most of them are Technicians,
because they say they do not want to spend the time to learn the code.

I have other friends that have worked on the code occasionally, but have
not put in any time with daily practice or on-air sending/receiving. Again,
they just do not have the desire to use/know CW.

Of the people I know who have put in serious effort, only two have been
unable to get their code speeds up as much as necessary. One was stuck at
11 wpm, and has been for at least a decade. The other never managed to
get over about 16 wpm. Both of these people will have Extra licenses before
long - they certainly have the technical knowledge, and it is not from simple
memorization of answers either.

On the other hand, some of the non-code friends have decided that just maybe
the 5 wpm requirement would be easy enough to make it worth studying to gain
the extra HF band privileges.

>
Go back and read it again: I said "what THOUSANDS of NEW hams?". If the 1/2% stat is correct that means that only around 335 previously unlicensed folk have become hams for the first time in the subject timeframe. Which in turn means that "restructuring" is another gummint thud. Which is also obviously not "thousands". Per previous the way I view the matter is that upgrades don't mean SQUAT for ham radio as a service or for anything or anybody else except Joe's personal jollies. Maybe you can explain why a Tech Plus who upgrades to Extra is a bigger asset to ham radio or "the National Interest" than is any no-code Tech who doesn't give a bleep one way or the other about getting on 20m ssb. I'm all ears, go for it.
>

Really? Geez. Thanks for the hint on "how it can be done". Us CW DX contesters conventionally have two HF xcvrs or at least one rcvr and one

xcvr on the two hot bands of the moment and we're also contiuously logged
onto the 2m packet spots network. The confuter does the bandswitching thing.
Figger 750 dx contacts on avearge for a modest station on 160 thru 10 plus
2m digital during any 48 hour contest weekend. Izzat enough "band occupancy"
to "protect" our freqs? Yeah, I know: Whatta sad bunch of lo-tech noclue
archaic brass-pounders . . Hell, some of us are still running 486 boxes for
chrissake . . !

: Are you suggesting that amateur radio has something to do with Marconi? NO! It cant
: be!?

Check your history or radio. It's a documented fact, David.

: Ive never known that police could dial a phone from their cars years ago when hams
: were doing it all day long!

Police department pioneered repeater technology as we know it today. Prior to that, they used frequencies just above the AM broadcast band, although antennas proved to be very cumbersome.

Repeater technology was later adopted by the telephone companies for modile telephones. Initially, one had to call the operator of their radio, then five the telephone number and billing data by voice. This method was still used by VHF marine operators, until that was finally phased out as boaters began installing cellular telephones on their vessels and cellular converage extended into the Gulf (sites were located on oil rigs, with service beamed offshore by mictowave or satellite).

MTS and IMTS in initially used the old Z Band frequencies (35 MHz base, 43 MHz mobile). Later they migrated to VHF-Hi Band (152 MHz) and UHF (454). Cellular on 800 MHz debuted on the early 1980s, and was based on the principle of dividing the geography into small cells in which frequencies would be reused many times over. This was necessary because of severe overcrowding. In the late 1970s, there was a seven-year waiting period to get a local number, and a ten-year waiting period to get a wide-area number. In Houston, there were only four VHF IMTS channels, which meant only four conversations could occur simultaneously.

Please refrain from asking any further questions about something you know nothing about. You only make yourself look extremely stupid.

There any HF Net directories on the internet that're actually kept uptodate?
Thanks!

5826. Primestar satellite receiver

Recently, I had my satellite TV service switched from Primestar to DirecTV. The installer let me keep the old dish and receiver. Has anyone modified this equipment for ham use? Is it possible?

73,
Mark, N8ME

You have a toaster? Why would you have one of those things in your house? Do you realise how many fires are started each year by toast? You will never find one in my house. Heck, I even got rid of the stove, oven, and refridgerator. The hot water heater goes next. ;-)

Seriously, maybe he has a good reason for the extra caution. Or perhaps he IS a little too cautious. But, on the positive side, he'll never burn his finger while soldering if doesn't use a soldering iron. And, because of that, his family is spared the language that is often associated with such an event. See, there IS a positive side to everything.

The subject line says it all.
I used to have these, but have lost them through 2 moves.

If anyone is willing to run off a copy and send it to me,
I'd really appreciate it. I need to install a tone board
in the one I got (and solve a few cold solder problems).

Please e-mail responses.

Actually, it seems unlikely that these anonymous hate-spitters work
for the Defamation League, since their foul language and wild
flights of fancy would tend to cast such discredit on them that they
would be useless as disinformation operatives.

That their long train of unsupported insults is fictional probably
need not be emphasized, since it is obvious.

What should be understood, however, is the credence they give to my analysis, critique, and position in my original article in this thread.

Though they are following (not following well or skilfully, mind you, but still following) the maxim "If you can't attack the message, attack the messenger," what they don't understand is that the people I'm trying to reach could never be persuaded by such childish taunts.

In fact, the people I'm writing for will, after reading the obscene drivel of Mr. "Squirrel" and "Mz. Gonad," immediately perceive that my detractors _know I am right_ about the facts -- otherwise, they would have refuted me, which they have not done.

What's really interesting to me about the crazed hatred that the excellent Liberty Net seems to inspire in these creatures is that they apparently can't stand to have even one small dissenting voice anywhere on the radio dial -- even a small, low-powered group of amateurs using HF SSB!

All over the television and radio broadcast spectrum, over megawatt upon megawatt of transmitters, in every city, 24 hours per day, seven days per week, we receive endless messages from the billionaire media elite extolling the end of American sovereignty, the effective repeal of the First and Second Amendments, the "holiness" of Israel, the "necessity" and "morality" of unlimited immigration and racial mixture -- and yet when a few Americans who dissent from such treason want to have a peaceful conversation about it over amateur radio, some become so deranged with frenzied hate that they will do almost anything to disrupt or censor it.

So it often seems to be with the disciples of "tolerance."

As ever,

--

Kevin Alfred Strom.

5840. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-30 00:00:00 UTC
From: jamesrhampton@my-deja.com
Message-ID: <8ojo0n$58v$1@nnrp1.deja.com>
Source record: 104114
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner

Glad to hear from someone 'in the know'. This is what was told to me. The way he was laughing made me feel the story rang true. I will admit that anyone (law enforcement or not) will end up getting 'canned' if he or she abuses their position in a job. That said, can you - honestly now - say you never, nor anyone you knew in your job, ever 'misappropriated' a pencil, or pen, or anything else? Or perhaps threw the dice as apparently one individual may have done? The only reason I gave credence to his story is the way he was laughing and the tears WERE pouring down his face. Obviously, had someone called someone else's bluff, there could have been heck to pay. Yes, I had my 1st phone, telegraph, etc - sure, there could have been problems. Did it happen? My guess is that it probably did simply by his reaction. I also was on Guam. When I have mentioned we had run around 1,000,000 watts erp, few believe it. Consider this: 3 enlisted hams (1 e-2, 1 e-3, and 1 e-4) are in the shack. The number two in command, the XO, a light bird (o-5) comes in wanting a phone patch. 20 meters is a mess. The propogation was very poor and the big guns were comming in around S-2. We tried. We got a station out of LA who said he'd try a patch if it was local, but the qrm was killing us. We were running a Collins S-line into a TH6-DX up 102 feet over salt water. The XO asked if we didn't have enough power. You gonna explain? No, sir, that's the problem - not enough power. He asked if we could listen from the shack if we could transmit somewhere else. Of course we could. He picked up the telephone and called THE US NAVY TRANSMITTER site at Barragada, Guam. "This is the executive officer. I am going to put a man on this telephone and he will give you the frequency. I want this telephone patched into a 40 KW transmitter on a rhombic pointed stateside on that frequency." This is something no one would do on his own - the law aside, that was a military installation. Who would argue? The S-meter simply went to the rail as that transmitter fired up. We got a station in San Francisco to reply and he simply asked "What in hell are you running old man? I can't even hear Japan and you're 40 over 9!" This is also a true story. If the goo hit the blades, who's in trouble? The goo wasn't likely to hit - unless you argued with the commander! As far as a million watts, I am sure that huge rhombic had WAY over 10 Db forward gain. We had to be at least at half a million watts erp and likely at a million; perhaps a bit more. As to who was actually running that - I have no idea. They were located 20 miles away at the transmitter site. For now, however, I simply run 6 aa alkaline batteries and get by very well on 440.

: That represents the arrogance common to many older hams. The newer hams want
: little to do with the "old farts" because they are such know-it-alls.

The so-called "newer hams" want to enter the hobby without demonstrating proficency in the radio art (with includes Morse code). The current restructuring is the product of this "gimme gimme gimme" mentality. The League, Fred Maia and Kenwood are out for profit, not advancing amatuer radio.

: Wayne Green warns against these old coots all the time.

"Doctor" Wayne Green is another crackpot trying to squeeze all the profit from the hobby as he possibly can. As an aside, I publicly challenged Wayne to debate me on these points. He backed down, not surprisingly.

While the tone is different than that of 2 meters or 70 cm I would not call it muffled. If it is out of warranty I'd bring it to a tech clinic at hamfest or ask someone who might have some testing equipment.

By the way just got mime back from Kenwood's east service center and it's working great (they replaced a connector)

>>write you up." The cops tore the ticket up, packed up the radar, and went home.
>>
>>This is true. It happened a couple of months before I entered the U.S.
>>Navy in January of 1967.

This sounds like another urban legend to me.

Back then we loved to spread macho stories like that ... the
few agents who actually tried such confrontations were very
quickly identified as problems and were soon weeded out if they
didn't get back into line.

FYI - a radar endorsement is not and was not required or valid
to service a speed radar, just for Marine Radars. And there is no
such thing as an "inspection sticker". The most that could
have been required in the field is an ID tag (FCC Form 452-C)
with the name and call letters of the licensee. Service records were
inspectable on request but could be, and usually were, kept
back at the shop.

> I laughed too! I hope they try and arrest someone from the FCC
> for having a scanner!

The relevent law is very specific about "in the performance oi
his/her duties" as a Federal enforcement officer. Won't
happen, although FCC agents have been stopped and cited for
speeding while tracking radio violators as well as other
traffic offenses, even in official vehicles.

>The fuzz had radar way back in '66?

NYPD had several radar cars as far back as 1961 and LAPD had
some as well in the same time frame. They were big clunkers

with plastic "radomes" for trunk lids and they stood out like
sire thumbs. We could spot them a quarter mile away.

Well that makes three of you.
Listen Lrod, i cited the bill gave the link. you read it. Supposedly. they sent it to the finance commitee. the full senate does not have to vote on it. It an amendment to the IRS code - the Senate does npot have to vote on it. The point is, it shouldn't be introduced at all. A dumocrat tries to circumvent the legislative process that you suggest you know all about by sending it to commitee and you stick up for it. LOL The IRS has NO business overseeing guns, let alone a frickin registration of them that's un-constitutional.
My point was made and evidenced by the "legislation" that was introduced. nitpick if you like - it's typical. just because the First Amendment right protects you, you shouldn't use it to attack the other "rights". soon they'll be after the ones you like. LOL
the problem with you liberals is you don't know where to draw the line. you are AGAINST capital punishment of criminals and FOR abortion on demand. Translation: you want criminals to live and babies to die. you think it's OK to teach children in school about homo's lifestyle but are against prayer in school. Translation: you think it ok to teach deviant behavior but not moral behavior. There are plenty more examples - I'll save them for some other time. You get my drift I'm sure.
It's easy to be a dumocrat, just stop thinking and then vote that way.

Al Gore Reasons.

I am new here as I just got introduced to amateur radio. This thread [Open letter to all the TROUBLEMAKERS (Glenn, Blake] originally started on rec.radio.scanner and doesn't help to get me interested in talking on this NG. Yea, I know I just should ignore this crap, but hey, I'm human and read them just in case there is something useful. thankfully there are other forums but I hope to stay welcome here.
Come on guys, stop the crap.
Chris

IMNSHE every FCC inspector did...we got it in "boot camp".
Those PDs who had professional service departments knew it
also.

Smart inspectors didn't mess with the PDs because all the
agency "field brass" was tight with the PD comm folks through
APCO and working interference cases with/for them. At least
in my office......

Yes, that's what the link said.

> the full senate does not have to vote on it. It an amendment to the
> IRS code - the Senate does npot have to vote on it.

Where do you get this nonsense? It doesn't make any difference whether it's an amendment to the IRS code, FCC Part 97, FAA Part 121, or any other Federal code. It gets voted on by both houses and signed by the President or it doesn't become law. Period (with the exception of the President allowing the bill to become law without signing it).

> The point is, it shouldn't be introduced at all. A dumocrat tries to
> circumvent the legislative process that you suggest you know all about
> by sending it to commitee and you stick up for it.

Sigh. You are without a clue. Here's how it works: Republican or Democrat, a member of the legislature, house or senate, introduces a bill. I think even you with virtually no knowledge of the legislative process will agree that's within the purview of the legislator to introduce a bill that addresses his convictions. Sort of like the Estate Tax Repeal. How much do you stand to gain from that?

Then the chair of the body (in the current Congress, that's always a Republican) refers the bill to committee for study and refinement.

Get it? A Republican sent that to the Finance Committee. Not the author of the bill, not the minority leadership, not President Clinton, a REPUBLICAN!

And no matter what you may think, it does not become law until it's voted on by BOTH legislative bodies. Passed by a majority. And the Republicans control both bodies.

Now explain how that circumvents the legislative process. No, on second thought, don't. You don't even understand it.

LRod

5870. Service Manual Icom IC-211

Newsgroup: rec.radio.amateur.misc
Date: 2000-08-30 03:58:09 UTC
From: Chuck <sulch@gte.net>
Message-ID: <rg1pqs0qoie3qv9e6ce7o1atjdt0nvgqk6@4ax.com>
Source record: 104093

Hello, I am in need of a factory service manual, or a copy thereof; I have a 211 that is from 2.5KHz to as high as 19KHz higher than displayed frequency both TX and RX. When first powered up it is right on frequency then drifts the amount previously mentioned; however, once warmed up the drift stops and the unit is stable from there on.

If anyone out there can help it would be most gratefully received, please reply to sulch@gte.net

Thank you,
73s Chuck KG4ESR

5871. Re: Installing radio in Bonneville SLE

In article <8oe0it$c0j$1@nnrp1.deja.com>, K0HB@arrl.org says...
> I've just ordered up a 2001 Bonneville SLE (leather buckets option) for
> K0CKB. Anyone ever mounted a radio (Yaesu FT8100R or equivalent) into
> this car (virtually identical cockpit configuration to 2000 model).

I've got mine (Yaesu FT8100R in a '96 Bonneville) sitting beside the
console. A small part of the radio will actually 'wedge' inbetween
the seat and the console. Double sided tape (just a bit!) on the
'outside' edge (closest to the front of the car) will hold it secure.
I've used this arrangement for a few months now and haven't had any
troubles. I have had to slightly tilt the radio so I could see the
display square on, and also to allow air flow thru the back, with its'
little fan.

OK, it's not a 2000 or 2001 but from what I can see on the Pontiac
website, the new Bonneville layout is very similar to mine.

KKKevin is thouroughly familiar with this, since plumbing and electricity were only introduced to his part of Minnesota in the early 1960's. Or is it because his father couldn't hold a job long enough to be able to afford these necessities?

Hi All

A friend requires two UT-50 or UT-51 CTCSS tone boards for an ICOM
IC-229H VHF mobile. The local agents do carry this board anymore.

Any help in locating the boards would be appreciated.

Please mail any info to reece@kingsley.co.za.

Thanks in advance.

Regards.

That represents the arrogance common to many older hams. The newer hams want little to do with the "old farts" because they are such know-it-alls.

Wayne Green warns against these old coots all the time.

Doubtful. You are unconvincing when pinned for details of how
your plan would work in practice. I have repeatedly asked you to explain
exactly how you propose to get from our current multi-racial single
society
to multiple single-race societies, and what you intend to do with those
who
will not go along, and you repeatedly evade this question. I know I've
asked
at least three times now. Perhaps it is because you know
how most people would not condone the sort of mass bloodshed and
coercive violations of individual freedom required to bring about
your single-race utopia, tearing people from their communities because
of
their perceived race, who will not wish to go.

I predict you will continue to evade this question. After all,
wasn't it your mentor Pierce who once proposed that a few hundred
railcars full of bodies of your opponents ("race traitors",
interracial couples and political opponents) would do the trick?
Wasn't it he, in the Turner Diaries, who glamorized a night of
hangings?

We know what your ilk represents, and you can't possibly dress it
up enough to fool us. Go form your own voluntary single-race
society if you wish, and go live there.

With all wishes.

-- Ross

I think it's in Radiocommunications Rules R.R 1-7, R.R 1-9, R.R 32, R.R
1-17, R.R 24-1 al.2023 together that made the rule.

<ggg>
>

If I say so it's because we have the same legal problem in France with
the criminal code article R.226 (forbidding some equipments) and that
legal argument has been studied by lawyers.

Making QRM with spurious is illegal, so you must have permanently (even
in portable) an equipment to monitor that you didn't radiate spurious.
The cheapest equipment to monitor spurious with frequency display, is a
wideband RX, so its use is not illegal because nobody can obligate you
to buy an EXPENSIVE portable spectrum analyzer.

Ham-radio is not only for rich people (if governements disagree with
this principle, sell portable spectrum analyzer for $200 !)

:Chris has this nailed exactly.
:
:The Indiana law clearly exempts any ham as
:long as the ham isn't TRANSMITTING on a
:police frequency. That exemption would
:allow the ham to have a scanner.
:
:Funny too that newspaper reporters are also
:exempted. Guess the cops have no problem
:with reporters listening in, but don't want the
:"regular public" listening.
:

The press has much better lawyers than the general public. The
average ham is too cheap to hire great lawyers.

:
:>There must be more to this story because Indiana, like a lot of
:>states has an exemption for licensed amateur radio operators. Below is a
:>copy of the appropriate statute
:>
:>
:> IC 35-44-3-12
:> Sec. 12. (a) A person who knowingly or intentionally:
:> (1) possesses a police radio;
:> (2) transmits over a frequency assigned for police
:>emergency purposes; or
:> (3) possesses or uses a police radio:
:> (A) while committing a crime;
:> (B) to further the commission of a crime; or
:> (C) to avoid detection by a law enforcement
:>agency;
:>commits unlawful use of a police radio, a Class B
:>misdemeanor.
:> (b) Subsection (a)(1) and (a)(2) do not apply to:
:> (1) a governmental entity;
:> (2) a regularly employed law enforcement officer;
:> (3) a common carrier of persons for hire whose
:>vehicles are used in emergency service;
:> (4) a public service or utility company whose
:>vehicles are used in emergency service;
:> (5) a person who has written permission from the
:>chief executive officer of a law enforcement
:>agency to possess a police radio;

:> (6) a person who holds an amateur radio license
:>issued by the Federal Communications
:>Commission if the person is not transmitting over a
:>frequency assigned for police emergency
:>purposes;
:> (7) a person who uses a police radio only in the
:>person's dwelling or place of business;
:> (8) a person:
:> (A) who is regularly engaged in newsgathering
:>activities;
:> (B) who is employed by a newspaper qualified to
:>receive legal advertisements under
:>IC 5-3-1, a wire service, or a licensed commercial or public
:>radio or television station; and
:> (C) whose name is furnished by his employer to
:>the chief executive officer of a law
:>enforcement agency in the county in which the employer's
:>principal office is located;
:> (9) a person engaged in the business of
:>manufacturing or selling police radios; or
:> (10) a person who possesses or uses a police radio
:>during the normal course of the person's
:>lawful business.
:> (c) As used in this section, "police radio" means a
:>radio that is capable of sending or receiving
:>signals transmitted on frequencies assigned by the Federal
:>Communications Commission for police
:>emergency purposes and that:
:> (1) can be installed, maintained, or operated in a
:>vehicle; or
:> (2) can be operated while it is being carried by an
:>individual.
:>The term does not include a radio designed for use only in a
:>dwelling.

The Columbia Amateur Radio Association (CARA) presents the 24th annual
Howard County Hamfest. Come join the fun! Bring the family! Lots of amateur
radio gear, computers, electronics, and dealers!

Amateur exams will be given at no charge.

40,000 square feet of indoor display area. Inclement weather is not a problem!
Large outdoor and indoor tailgating area. Great food and refreshments on-site!

Where: Howard County Fairgrounds on Route 144 in West Friendship Maryland.
Take I-70 to MD 32 south to Route 144 west. The fairgrounds are 1
block west of the 32/144 intersection.

When: Sunday October 8, 2000 (8AM to 3:30PM, vendors enter 6AM)

Talk-In: 147.135/R+ (No CTCSS required on the day of the Hamfest)

Admission: $5 per person (children under 12 FREE)
Tailgating: $10 per space
Tables: $20 (1-4), $18 (5 or more)
(Tailgate/Table prices include admission)

Tables may be reserved in advance by:
1. using our on-line registration system by following the link
at http://www.qsl.net/cara
2. emailing kb3wk@arrl.net

For more information, please write to:

CARA Hamfest Committee
P.O. Box 911
Columbia, MD 21044

or send email correspondence to: cara@qsl.net

I know that I can use the Primestar dish for Ku band reception by using my Echostar 500 satellite receiver. Never tried anything with it on Ham freqs.

With all due respect, any connection Amateur Radio ever had to "the radio art" was coincidental. Certainly some amateurs made very significant contributions to both technology and communications, but the vast majority did little more than enjoy it as a hobby - and there's nothing wrong with that. In the beginning, amateurs had to homebrew their own gear so it was entirely reasonable to expect them to prove sufficient technical skill to do that before granting them a license. That need has long since been overtaken by manufacturing technology that produces $400 transcievers that're far better than anyone can homebrew for thrice the price and its been like that for over 20 years. I had the knowledge to design and build 1960's gear, and aced the General/Tech exam circa 1978, but I'm going to have to do some studying to get the questions on satellites, packet, etc on the new extra test answered correctly. I could built a vacuum-tube rig with hand tools but I'll bet that not one ham in 100 has the equipment to build one from scratch using modern manufacturing methods: a 100w all-band HF rig thats smaller than a CB and does everything but wipe your nose. So we do the sensible thing and buy "appliances" instead. Same goes for code. It's almost as relevent today as wiring up tube sockets or starting fires with flint and steel - fun but hardly practical - and kids who grew up with cell-phones, the internet and other far superior technologies see about as much need to master it as they do to raise their own potatoes. Beyond that, the more things change the more they remain the same: I expect some of these new kids will make significant contributions - not many of them but there never were many - and the rest will continue to enjoy amateur radio as a hobby. Can we quit bitching and get on with it - or is bitching half the fun?

I have seen no evidence that the FBI has ever taken the slightest
interest in me. Like the rest of this anonymous person's personal
insults, this claim is false and malicious.

And when he resorts to such tactics, he is merely admitting that he
has no argument to make and no factual or logical support for his
position.

He is also proving that he is _not_ a gentleman.

[...]
> Obviously, you've mistaken me for somebody who vaguely gives a fuck about your
> sad little life.
>

Again, he is the one vomiting gross insults and falsehoods upon me
and my family -- including innocent women and children about whom he
knows nothing; which fact indicates that he does indeed care very
much about me, though it would probably be more accurate to say that
he hates very much.

[...]
>
> You are a poison-tongued, lard-encased asshole whose praise mechanism was broken
> when his father wouldn't buy him a bicycle for his tenth birthday.
[...]

Is such fiction, in his mind, an actual argument against some
position I have taken?

> Your "wife" looks so old, she _must've_given dinosaurs head. How many facelifts has the
old SOW had?
>
[...]

His viciously obscene slights of my beautiful bride are proof of
what _he_ is.

This thread began with a mendacious and anonymous attack upon a shortwave amateur radio discussion net called the Liberty Net (3950 kHz LSB, Saturday evenings 10 PM Eastern US Time).

I pointed out the illiterate and questionable nature of the anonymous article. Then the hate-crazed anonymous liar(s) commenced the personal attack upon me and my family you have just witnessed.

The Net itself has had to endure similar behavior from those who would disrupt or jam it because the disruptors can't tolerate the expression of ideas with which they disagree. So they censor by jamming, or flooding the frequency with personal attacks. The attackers, and jammers, are the very embodiment of intolerance.

Those who still adhere to the standards of civilized behavior, whatever their position on the Liberty Net, will draw the inescapable conclusions.

With all good wishes,

--

Kevin Alfred Strom.

> at least three times now.
[...]

Actually, I've answered your question repeatedly; but since my answers didn't fit the stereotyped pigeonhole in which you'd like to place me, you didn't like them.

In my opinion, at least 90 per cent. of the racial problem could be solved by repealing all of the forced association laws, and by implementing a foreign policy and social programs which respect the national sovereignty, racial integrity, and survival of all peoples.

As I've repeatedly said, there is plenty of room on planet Earth for experiments in multiracial societies. _Magna Europa_ is not threatened by the existence of northern Brazil or Melanesia.

But the global multiracialism currently being forced upon us by the billionaire elite spells death for all peoples and cultures.

> Wasn't it he, in the Turner Diaries, who glamorized a night of
> hangings?
[...]

That novel, which I didn't write, contains violent scenes, to be sure -- but not more violent than many I could find on the rack at the local dime store. And we hear no protests about them. Therefore I conclude that it is not the violent scenes that are objected to in the _Turner Diaries_, but the political ideas.

>Go form your own voluntary single-race
> society if you wish, and go live there.
[...]

It appears that you are the one discussing population transfers, at least for those with the "wrong" ideas.

Homogeneous societies were the norm for millennia upon millennia, virtually all of human history. In the racially and ethnically homogeneous societies of today, racial hatred and violence are virtually unknown.

Multiracial societies, in the scale we see them today, are a recent experiment being foisted upon the peoples of the West by their rulers, and they boil with ethnic hatreds and conflicts.

I am not one to blindly hold on to tradition for tradition's sake; but in this case, I say that restoring the traditional kinship basis of society is the way to progress, peace, and freedom -- and _true_ diversity worldwide.

With every good wish,

--

Thanks for you reply,

Can you recommend specific part 15 devices? The data rates sound great
not to mention the price @ $300 per node.

Best Regards,

Now, are you proposing that they send the thank-you letters to the FCC for the FCC's enacting three classes of license with a 5 wpm code speed or to the ARRL for asking for 4 classes of license with a 12-wpm code speed? I just want to make sure we know what you are talking about, Vince. :-)

CBC International has info on CB-10M conversions. See http://www.cbcintl.com/.

Source record: 103999

Hi,

I am trying to locate a Science of cambridge (Later to become sinclair) Mk14 computer. The computer was available in a home built kit in the UK and, from what i am led to believe, many were sold to amateur radio enthusiast, as, at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this group)

If you have one, or any spares, or indeed any sinclair items ie radios, calculators, watches, etc, working or otherwise, that you would like to sell please email me as i cannot regularly access newsgroups.

I would also possibly be interested in early home computers from the late 1970 to the late 1980s. Preferably boxed but all will be considered.

Thank you in advance.

david.oharrow@btinternet.com
